4. Is this the best scanner to get?

Yahoo group: UBC3500XLT
Date: 2006-12-19 22:14:46 UTC
From: Neil
Topic: 4 Message: 4

I recently bought another UBC scanner with close call, it was ok but
rather limited in features. I have lost it somewhere either in the co
vehical or in here and got no idea where it is... (Again! LOL.)

Does the 3500 do instant tone decode? (dcs/ctcss)
How well does the close call work?
Is there plenty of free software out there to download close call
results to the pc?

Let me know by 5.30am tomorrow and if it is, ile go and buy one in
Nervarders tomorrow!
(They say in stock on the website.)

Neil.

5. Re: Is this the best scanner to get?

Neil,

The scanner is very nice. Close call works like a charm and the scan
speed and sensitvity are fine too. All in all a perfect scanner.

It is just marketed 10 years too late :(

For around 250 EUR not a bad deal at all!

Grtz,

Sweepteq

From: radiotechscan
Topic: 9 Message: 9

.

Hi, i have added a few files:

You can see them in the files-section of this group.

They are: service-manuals,schematics,testmodes...etc
of some other portable uniden scanners that
incorperate the closecall feature.
in this case it's the UBC72XLT and the UBC92XLT.

I'm pretty shure that the closecall circuits are
the same as in the 3500XLT...since i don't have
a schematic for the 3500XLT yet we have to do
with these.

I uploaded these so we can have a closer look at
how closecall really works and how the circuit is
constructed.

Once you understand the closecall-circuit
you will understand much better what it can
and what it cannot do.

If anyone wants a technical explanation of closecall
let me know i'll be happy to explain.

Try the closecall-testmode to learn a little more about it.

Ofcourse if anyone has a service-manual,schematic or testmode
of the UBC3500XLT...please upload it...Thanks!

10. Other scanners that look like the 3500XLT.

Yahoo group: UBC3500XLT
Date: 2007-01-04 18:16:29 UTC
From: radiotechscan
Topic: 10 Message: 10

.

There are a few other scanners that look similar to
the UBC3500XLT.

Here's a few "lookalikes" that i found:

BCD396T (USA)
BCD396T (AUS)
BR330T (USA)

Features that these have and "our" 3500xlt not are:

APCO25-decoder.
Trunking.
Over the air cloning.
Cellular-freqs blocked.

Let me know if there are more...thanks !

Good Point Dave,
Having just bought mine today too was looking through
the manual to see about a reset..just in case.
Anyway I was late in and put the batteries in after unpacking for a
recharge so might leave it tonight and have a proper play tomorrow now
after giving it the full 14hr charge...I'll read the manual again.

John.

From: radiotechscan
Topic: 20 Message: 22

.

To reset:

a) Switch off scanner.
b) Press and hold down the 3 keys : "HOLD" , "2" , "9"
c) Switch on scanner.

You have know lost everything you ever put in
and the scanner is reset to factory-setting.

Above procedure works for all Uniden scanners
in some models the "HOLD" key is called "MANUAL"

4 decimal places as in 450,xxxx ?
something like for example 450,0125 isn´t that correct then ?

Or does it display something else ?

If it does show something else you might try changing the bandplan
how to do that is at the top of the instruction-manual.

Maybe you ment something else ?

Hi,
OK..I've pretty much sussed it out at long last.
I need to put some notes down pretty quick as I'll forget things.
One thing I don't like is the cr@ppy control knob..it feels cheap and
don't know about long term use..certainly not Icom quality?
Although overall I'm pleased so far and is sensitive on civil airband.

John.

It's not just mine that's got around 2deg of freeplay then?
It's often a way of this type of control which incorporates a push
function with a rotary opto coupler.
Despite that, I kind of like its response, it returns a satisfying click
with each increment but doesn't drag any more than necessary.
And I like the way you can navigate a menu with the dual function control.

My IC-R20 went through a few moments where the rotary controls became
'gritty' (we'll need the gritters tomorrow, but that's another subject)
This was in the early stages of ownership, and only briefly. It's long
since sorted itself out.

Tone,
I like the scolling display which makes easy on the eye.
My control knobs wonky as well (forgot to mention that bit) but like
you say a definite but loud enough click!
My main scanner too happens to be the Icom IC-R20 too which I can't
fault but pricier and a little bigger which I use mainly for home use.
But for out and about and a little bit of home use..I'm happy enough
with the Uniden for what it costs.

I do not belive it is neccessary with more than 4 decimals.

A PMR446 frequency with 12,5Khz using 6.25Khz offset at 446.00625 will be truncated to 446.0062 and it is only 50hz off. Something that are inside the scanners reference crystal frequency drift anyway.

Yes, it displays i.e. 446.0062 for PMR446 channel 1 instead of
446.00625. Not a big deal in practice I'd agree, but a nominal
frerquency is either right or it's wrong to my way of thinking.

What bothers me most is that it could give rise to a whole bunch of
frequencies being mis reported on scanner groups and lead to much
confusion, especially to the beginner.

Tone.

Largely I'd agree with that, and I made that point when I wrote the
beginnings of my review on my website.
http://homepage.ntlworld.com/tony.ling/radio/reviews/ubc3500xlt.html
Whilst it's not strictly necessary, I think that a scanner which
claims to deal with 6.25kHz steps should have enough bus width to deal
with five decimal places.
The problem comes, with me, when I try to export tables to my
database. It makes the task very difficult wheras otherwise it would
be tantalisingly easy. In the UK, we have a lot of stuff with a
6.25kHz offset. Not just 446, we also have a nationwide railway system
and very frequently, in services ancilliary to broadcasting.

Tone.

Do you know if Quick Scan be reprogrammed to use 8.33kHz steps?
When you enter an 8.33 freq it goes to the nearest 12.5kHz freq.
TIA
Richard

35. Battery meltdown

Yahoo group: UBC3500XLT
Date: 2007-02-09 01:27:45 UTC
From: Anthony Ling
Topic: 35 Message: 35

Can anyone tell me how long the UBC3500XLT is supposed to take to charge from flat?

I had mine on charge (switched on too) all day yesterday and it was still showing 'Normal Charging' quite late into the evening.
Then, I moved it to another room and put it back on charge.
An hour later, I happened to pick the radio up and the whole thing was red hot.
I took the batteries out to cool and they were so hot, I couldn't hold them in the palm of my hand for long without discomfort. The battery compartment doesn't look damaged but it did smell very hot inside the scanner.

I presume this is a fault with the charging circuit not sensing when the cells are fully charged. How long should it take to charge the supplied batteries? Anyone else had the same thing?

Tone.

Tone,
The book says 14hrs.
My scanner too became rather warm on charging.
I'm a bit funny on charging these type of batteries in the scanner itself as I don't think it does it any good long term..just my thinking BTW.
I may decide on charging these up in a seperate battery charging unit and then installing directly into the scanner itself in the future.
John.

I've had mine on charge for 18 plus hrs and mine still says charging, i wonder myself if it will ever say unit carged or something like that !! BTW mine dont get that hot, these systems and groups i have got to get my head round, will try and get to grips this weekend, as i'm so used to banks and channels i may need some help from you guys.

41. Virtual Control

Yahoo group: UBC3500XLT
Date: 2007-02-10 18:04:22 UTC
From: Dave
Topic: 41 Message: 41

Hi All,

I dont know if anyone else has found this but when you minimize the virtual control screen you get this lovely litte screen that stays on your desktop then if you hover the mouse pointer over the screen you have the Hold/Resume Scan and LockOut function at the bottom it's absolutly great so you can still work away on other things and still see whats going on. Just thought i'd share that with you all.

Still trying out all other functions as i only just got my radio this week.

Regards...Dave

42. How does the UBC3500XLT perform connected to an outdoor discone,colinear etc

Yahoo group: UBC3500XLT

From: mm3pfa
Topic: 42 Message: 42

Hi folks,
I have just joined this newsgroup after reading the review on this scanner and i am tempted to purchase one for its features and price.I like the idea of close call,sounds like you will be able to find frequencies that you may have missed before during conventional scanning.I have 2 questions to ask before i comit to purchase one of these.

(1) how strong a signal or how far away will the close call be able to pick up a signal from.for example would it detect a vhf signal say 50 miles away which is mabye a bit scratchy.or does the close call just work on detecting strong rf close by.

(2) How well does this scanner perform when connected to an outdoor scanner antenna,like a discone or a multi band collinear.Does it suffer from any breakthru intermod interference or that from anoying pagers etc.I have got a kenwood th-f7e 2m/70cm handheld with full scan feature from 0.1-1300mhz which also has ssb receive from 0-450mhz.Once i connect my kenwood to my 2m/70cm collinear it gets totaly overloaded with breakthru all thru vhf and uhf.even if i put on the atenuate feature i still get anoying breakthru which is fustrating and really unusable.I have now got myself a yaesu ft817 which is magic no problems.going to sell the kenwood now and possibly purchase the uniden if it works well as i enjoy my scanning also.

would be great if i can get some info on this to help me consider purchasing one of these.

Thanks in advance and happy scanning

Ross

Hi Ross,
With close call, a number of factors come into play. One is obviously
the strength of the signal, but the other is the noise floor. If there
are a cacophony of broadcast transmitters, wifi & bluetooth devices, POS
machines in the vicinity, then the CC range is much reduced. It works
very much like a frequency counter in that it is counting pulses and
dividing that figure by the gate period. Also, the antenna you use has a
bearing too. If it is narrow band and offers some measure of
pre-selection, your results will be better in a high RF noise environment.

You do need a good strong signal to get a hit, lets say 30m from a handheld, but having said that, some people have reported several kilometres from high powered broadcast masts.

On unwanted products, this scanner suffers from this when connected to an external antenna in the way that all handheld scanners do at whatever price. Putting aside the nice feature set for a minute, it is, however a very good performer in radio terms. It is as good as many radios which cost twice the price.

There's a big difference in one respect though. Yes it has an attenuator, but not only that, the attenuator can be set on a channel by channel basis, or in the case of searching, a bank by bank basis. This makes a huge difference in minimising the nuisance of pager breakthrough and still being able to scan VHF. The lockout function is very slick too. Just one keypress and the offending frequency is dropped from the scan routine. All lockouts can later be lifted in one fell swoop at a later time.

Tone.

44. Clearing clipboard

From: Colin Norwood
Topic: 44 Message: 44

Hi
just getting to grips with the 3500 operation,

When using the copy paste option within the system on the 3500 is there any way to clear the 'clipboard' as such? Once you have pasted the channel? I've hunted the manual but cant find any reference to it?

Regards

Just when I think every question regarding the 3500 had been asked! :-)

OK so I got out my 3500 and did a few experiments.

1. There is no way to clear the clipboard through the menu system.
You can of course copy another frequency but that merely swaps
one for another.

2. Switching off the scanner, removing and replacing batteries doesn't work either.

3. Pressing and holding HOLD, 2 and 9 whilst pressing the power button MAY do it,
but I STRONGLY RECOMMEND YOU DO NOT DO THAT - it completely erases the
scanner's memory, and I'm not about to try it either! :-)

I've got to ask....

Why would you need to 'clear the clipboard'?

-Rob

ps If you are not already, I recommend you join the following Yahoo! group:

Good stuff Ross,
I don't expect you'll be disappointed, unless of course you can't get
hold of one because they're all sold out.
The opinion in the retail trade is that even if they cost ?100 more,
they'd still be flying out the door like they were going out of style.

49. Firmware updates (why always only in the US)

Yahoo group: UBC3500XLT
Date: 2007-02-13 19:54:37 UTC
From: radiotechscan
Topic: 49 Message: 49

.

Isn´t it remarkable how only the US scanners get new firmware
updates...never have i seen a firmware update for European scanners.

For example Uniden has these updates available for download
at their website.

Firmware updates are obviuosly small improvements to the software
wich is fixed inside the scanners microprocessor.

Obviously these updates are neccesary because there are some
errors or shortcomings in the preprogrammed microprocessors
when the left the factory...and the manufacturer only found them out
later.

From the fact that European models never get updates we
can only either:

A) European models are perfect and never have errors or
shortcomings in the firmware

B) European distributors/importers don´t give a shit,they are just
what we call "Boxshifters" (means they just buy a box and
and sell it on...not much service to be expected).
They never pass-on any improvements or complaints to the
factories.

I´m afraid it is the last one (B) that is correct.

Ofcourse that has to do with the fact that the US market is so much
bigger...and covered by just one distributor (Uniden USA)
in contrary to Europe with 35 distrubutors

I suppose firmware updates for US models are not usable for EU models
since they will "confuse" the EU scanner because it can´t do certain
things...like APCO-decoding...or receive US-only freqs...etc.

Usually these firmware improvements are not that essential that
older versions will be unworkable.

As a matter of fact firmware-updates are something relatively new
and have only appeared the last 2 years or so...caused by the fact
that now everybody has a PC and internet.

I guess we have to live with it.

Maybe between us as a consumer group, can decide on where there are improvements to be made in the firmware. Developers need sensible criticism to react to.

I'll throw a few into the pot
The squelch activated backlight needs to be a separate attribute to the overall backlighting behaviour, not a setting in itself. It should force the backlight turn off within a given time after squelch closes, rather than a given time after it opens.
All references to trunked systems need to be modified. For instance, entries stored under 'Qck Save Grp' / 'Qck Save Cnv Sys' need to be replaced with 'Quick Save Sys' / 'Quick Save Freqs'
I've got to say that the firmware on this scanner is pretty good, and using the Darwinian model, if it works it should remain stable but I would be interested if we could identify certain points and present them for consideration.
Tone.

Not so ramarkable as until recently there was no European
models with the ability to upgrade firmware.

Upgrading firmware first became an issue by the introduction of
USC230 and UBC3500 a few months ago.

I agree about the SQ operated displaylight. I also would like to see it changed from "one shot" with delay to a constant ON with open SQ and then applied a delay when the SQ closes.

The squelch settings are a bit unsensitive between setting 0 and 1. It is too tight and does not open as easy as wanted at setting 1. I don't see the need for ever using setting 3-15. Probably the whole range could be lowered so that 15 corresponds to the current level 5 and setting 1 are actually the current 0.2

I think the repeater offset for repeater find in close call and reverse monitor should be made user editable. Or at least possible to change throught the UASD program. And at the same time make the bandplan open to changes for stepsizes as there's no plan matching the nordic countries. Even if there where 20-30 different bandplans to choose from it sometimes would be difficult getting the correct one. In sweden we now see changes from 25Khz channels to 12,5Khz in different frequency segments and we also have a lot of 25Khz channels using 12,5Khz offset.

The display could be made like the BCT15 with an "active display" that also show the frequency instead of modulation type together with the name tag of the channel.

I have noticed that the BCT15 have a display that can be set to be used upside down. I can not imagine when to use this on a mobile scanner with all the buttons upside down. But on a portable it is very useful when you have it hanging from the belt and you look down at it to read the display Commercial portable 2-way radios often have this feature.

Good points there Ubbe and thanks.
Where are the squelch settings? I haven't even found this yet. I've only had mine for a week and the last Uniden I owned was a BC55XLT.
All points noted. Maybe we can look at this bandplan issue in more detail under a separate heading.
Tone.

Probably the whole range could be lowered so that 15 corresponds to the current level 5 and setting 1 are actually the current 0.2
> >
> >
> > I think the repeater offset for repeater find in close call and reverse monitor should be made user editable. Or at least possible to change throught the UASD program. And at the same time make the bandplan open to changes for stepsizes as there's no plan matching the nordic countries. Even if there where 20-30 different bandplans to choose from it sometimes would be difficult getting the correct one. In sweden we now see changes from 25Khz channels to 12,5Khz in different frequency segments and we also have a lot of 25Khz channels using 12,5Khz offset.

.

I´m shure there are some usefull firmware updates to be made
just...where are you gonna go,who will listen and pass it on ?
Don´t dream that Uniden or Icom..etc are carefully watching the net.

That backlight-on-when-squelch-opens is probably the longest on
the wishlist...i have suggested it many times to my local importer
but he never did anything about it...allthough it is probably the
easiest modification there is...in firmware it´s not even 1 line of
code.

Guess what... i´m proud to have been consulted about the 3 bandplans
currently found in newer Uniden models...one of the bandplans was
made for my country and they asked me how it should be...i´m not
shure if they followed up on all my suggestions :) :)

From: Dave
Topic: 60 Message: 60

Hi all,

Well i'm so made up with my 3500 i just cant still beleive it only cost me £145 from xovereign with just £6 p+p if it was on sale for say £250 that still would be a good price, How can a scanner with all these features cost this little.

It's been a week now since mine arrived and i cant leave it alone i can honestly say it's the best scanner i've ever owned i think it's really that good, It's been my first dynamic memory scanner and it's taken me a while to get to grips with it but now i've got my head round it all.

I just wanted to share my joy with you all and how i feel, If it wasn't for melv's review though i would still be using my VR-500, On VHF the scanner is absolutly fantastic, All i have regards antenna at the moment is a small desk top discone in the loft and i can pick up Stansted tower to ground as if i had the antenna 20ft up outside and i live 15 miles away.

One thing is though i have the pro software from Butel and maybe i'm doing something wrong here but when i enter the freq then name it then transfer it to the scanner the freq does not show up on the radio but does on the virtual control, so what i did is to enter the freq then in the name section enter the freq again then now when i transfer it to the radio on the disply it also shows the freq as well if you get what i mean, i'm probably doing something wrong but that's how i have done it, maybe someone has the answer.

Anyway if your still thinking should i buy one or not dont, just do it you wont regret it i promise....Regards...Dave

You did it right the first time.
The radio only show tag or freq. on the screen
My br330t (i'm told the 396 & bc15 are the same)
press hold to stop scanning
hold the Func button (on the side) and push 5 to toggle between tag
or freq.
your choice is applied to the whole radio (all channels)

Yes there are gaps.
UBC3500XLT covers the following bands: 25-512 MHz, 806-960 MHz and
1240-1300 MHz.

75. Re: gaps in the frequency 's of the 3500xlt

John Gorden is off this week and part of next, so maybe not the best time to call Nevada's.
I heard them cancelling an order from the USA for a scanner, as theirs are defo blocked on whatever their mobile phone band is, and ours are not (meant to be) blocked at all. All the import/export problems to the USA are hassle, thats why they cancelled it, not on legal grounds.

So if the yanks are trying to buy our scanners, that would make you think they are unlocked for all bands.
I suppose we buy their scanners for other reasons though.

Anyway, it seems our 3500's are blocked, from 512-806, mine is!

Neil.

VFO Mode

Actually, you need to press Hold first, then enter the frequency which will bring up the Direct Entry message and then press hold again, which then works as a VFO unless you want to activate the Quick Search.

88. CLOSE CALL - WHERE ARE YOU ?

Yahoo group: UBC3500XLT
Date: 2007-04-03 19:54:55 UTC
From: kevin6145
Topic: 88 Message: 88

I've used the Close call feature quite a few times with success getting some interesting hits
but one things really bugs me and it's the display while close call is running.

It does'nt inform me what frequency area it's currently scanning. I know that you can select or
deselect certain frequency bands from the close call search but is the close call scan done sequentially ?.....or is it like it's got it's ears open to all selected bands at the same time ?

Is there a specific way close call scans or is it random and is there a way of finding out (or
displaying) where it scanning at that moment ????

Kevin

89. Re: [UBC3500XLT] CLOSE CALL - WHERE ARE YOU ?

Topic: 88 Message: 89

turn off your scanner,

While holding down 3, 0, and HOLD turn scanner on and it will become a frequency counter which might show you a better idea of what goes on when in close call mode. It's so fast though it's hardly worth viewing.

remember page 47 of scanner instructions shows you how to reset which is 2, 9, and hold then switch on. Don't get the two mixed up or you'll be back to a factory reset setting and loose all your memories.

scott

.

Kevin asked:

> is the close call scan done sequentially ?
> or is it like it's got it's ears open to all
> selected bands at the same time ?

How CloseCall works

Yes it is sequentally (one band after the other).

As a consequence is it is reacting slowly
because time is needed to scan...and to listen
a little while on each band.

Basicly it´s a small frequency-counter (chip)...when it measures
a frequency wich lasts for a certain minimal time,
it then tells the main-microprocessor to tune the scanner
to that frequency.

In pratice it might measure 2 or 3 times...if all 3 measured
frequencies are the same (or very close) it considers it
a real and valid signal.

Similar to the "reaction-tune" technique by Optoelectronics
...only this time its all built inside the scanner.

> Is there a specific way close call scans or is it random ?

Bandfilter scanning

The reason why closecall is fairly sensitive...compared to
"reaction-tune" and frequency-counters is because it uses
the frontend of the scanner-part.

Such frontend consists of bandfilters...for the usual bands.
For example the 92 XLT uses 5 bandfilters...there might be more
in the 3500XLT.

Because it uses the existing scanner-filters it will (sequentially)
receive a smaller portion of the (very wide) frequency-spectrum
and therefore the background noise is much less...so a signal
will much easier "stick out" and be measureable.
Said differently...the signal doesn´t drawn in the "noise-floor"

The noise-floor is actually a mix of all radiosignals on the air.

Look at it as 500 people talking to you at the same time
or only 2 people talking to you at the same time.
...wich situation will allow you to pick up more conversation ?

To see what i´m talking about check out the circuit-diagram of
the 92-XLT in the files-section of this group..you can clearly see
the bandfilters...it even mentions the freq-band of each filter.
Those filters are used for both normal-scanning and CloseCall.

All (selected) bands are scanned one after one...and listened to
for a few milliseconds,to give the frequency-counter the time to
measure a signal.

Closecall reaction-time

The Closecall-circuit has to listen for a few milliseconds.
maybe even up to 1 full second...in order to distinguish
or establish if this a real signal and not some (unwanted) pulse
or interference from a car-ignition driving by.

That is also the reason why it wont receive GSM or Tetra since
these are very short pulses...to short to be measureable by the
frequency-counter circuit.

Also those GSM or Tetra-pulses are not in-sync with the
measurements of the freq-counter-chip...so if it would lets say
need 3 measurements to establish a "Valid" or "No Valid "
it could very well be that one time it is on a real pulse and the
second measurement might fall right inbetween 2 pulses where ther
is signal no signal at all.

If they would change (shorten) that measurement time...you might
very well pick up a lot of interference (very short pulses)
...making closecall useless.

Closecall order of band-scanning

I´m not shure about the order of bandfilter-scanning in case
you use only the closecall-function...it seems logical that it
starts at the lowest band and then up to the highest band.
Most certain it is not random.

It gets more difficult if you do mixed-operation
wich is old-fashioned-scanning together with Closecall
at the same time.

In that case it could be 2 ways...i´m not shure :

a)

It scans a few memory channels in the old way then holds
the scanning and listens on the selected closecall bands
for a signal (you may not notice that on the display)

b)

Or it operates in parallel,
according to the circuit-drawing it could do that,
so while it is scanning the memory-channels (or VFO-tune)
it also listens to signals for the closecall-freq-counter
Only problem is that and i´m pretty shure that only one
bandfilter can be used at the time.
so it can not listen at 2 bands at the same time.

From that you could conclude that mixed-mode should work sequentially

Maybe you could check that...by doing the following.

Program a few channels at for example the 50 Mhz band.
Set Closecall to UHF (450 Mhz) band.
You might notice some speed variations when you
have them both on...in that case it is obviously sequential.

It´s late here and this is a difficult question
...maybe someone else knows the right answer to
the mixed-mode question.

.

Hi,

Added a few links to (some wellknown Japanese)
manufacturers of scanner-antennas.
They have English websites.

You can access mentioned links in the files-section
of this group.

I wouldn´t mind if you would add a few links
preferably directly to the manufacturers.

Greetings

Radiotechscan

Just tried the close call test (holding down 3, 0, and HOLD turn scanner on and it will become a frequency counter) but now i am confused it dont seem to tally up with the cc band settings on page 68 of the manual eg (the manual says that VHF low 1 searches 25.0000 - 53.9937 MHz) Band Plan3 yet in test mode it is searching upto about 92.5000 the same goes for the rest of the bands so does anybody know what is going on here.

From: stuart574256
Topic: 94 Message: 94

Has anyone noticed the similarity of the belt mount on the rear of the radio to the rear of a cb mike. I have taken advantage of this by adapting one to make a very goode dash mount that puts the scanner in an ideal place to monitor, I have posted a picture in the photos section if anyone is interested. It is fastened to two of the dashes original screws so no damage to the facia.

Hi

I got the nylon case from the same website. For what it is, it is very high priced, fortunaly I got mine on special offer when I bought the Pro software and the USB cable as they have an offer on for a 3500xlt kit in which you get a case for free if you buy the other two items.

For what it is though it does the job. The only drawbacks that I have found is that I inadvertantly folded back the rubber protective cover for the PC connector socket when I put it in the case and it will no longer close now and that the flexible plastic cover over the screen can make it hard at times to see the screen due to reflections.

But overall I am happy with it and it does give good protection and alows access to buttons and sockets etc. For the very small difference in price it may be better to wait for the leather one. The main difference being the nylon one has a belt loop and the leather one uses the belt clip which come with the scanner. I actually prefer the belt loop as I think it may be more secure than the clip

99. Back after 2 year break

Hi all, after a break of about 2 years i am now back on the scanning scene. Decided to buy the 3500 which arrived today. Will be purchasing the software allthough not happy with Butel at the moment as i inadvertantly bought the ARC230 software and received my code and i am having some difficulty replacing it for the 3500 code.

I live in Hull and am a ham radio operator but still like to be nosey. I am ex RAF Gulf War Veteran so i am into military air. I had lots of freqs but 2 yrs old now so not sure how things are. I did have most of the TADS.

Well a brief hello and look forward to some great listening.
Thanks for providing this egroup.

101. Systems Groups unable to access

Yahoo group: UBC3500XLT
Date: 2007-06-09 21:28:49 UTC
From: zacklaws84
Topic: 101 Message: 101

I came a problem a couple of weeks ago in which I could not access a systems groups and could not work out what had happened to the system or even a solution to it apart from reload my profile from my computer.

Yesterday I discovered what had happened when it occured again and I feel that it may be a bug in the 3500xlt

For the Shuttle launch I created a system for "space", with two groups, one called "Shuttle" and one called "Satellites". As I did not want weather satellites to interfere with the shuttle launch I closed the Satellite group down. This morning I turned my 3500 on and inadvertantly closed down also my "Shuttle" group. I then discovered that I could not turn either group back on, but when only one group had been turned off I could turn it back on previously.

I went into system, and checked both groups which where unlocked and also both had quick keys allocated so that ruled that out.

Has anyone else come across this whereby if you close down all groups in a system that you cannot recall them and if so do you have a solution apart from reloading the profile. Probably a simple solution no doubt if I could find my manual.

Once again thanks for the reply, first time I tried it, it worked.
Recreated the situation, same system, closed all the groups then tried
it again but on pressing hold it closed my open system and opened a
system that was closed? Tried it two more times but exactly the same.
Then I noticed the system that I had closed all the groups down in had
been recreated two more times in my 3500xlt.

Very odd maybe time to restore my 3500 back to factory settings and
reload. Perhaps the moral of the story is not to close down all the
groups in a system as in reality there should be no need as you might
as well just close the system down to unless you close all the groups
down by accident

I wonder if this is a problem with the ARC software?
If you try and create another system of the same name manually, it takes great care to check and ask if you wish to go ahead. With ARC3500, it's all too easy to end up with duplicate systems of the same name if you don't select 'Overwrite Systems with same name'. And even then, as I recall, it gets confused if you have 'justified' (meaning centred) your system name.
I seem to remember having all sorts of problems at first until I found out which 'features' to avoid.
Tone.

From: zacklaws84
Topic: 101 Message: 109

Totally confused with it. Done a complete factory reset and reinstalled all systems but the problem still exists when I recreated it so had to reload everything again. It would not be so bad if when I read all info from my scanner to the software and could physically see that something was locked out but nothing, it all matches the original profile. I cannot see any connection with the software as it does it without being connected to the computer and it also does it if I close the groups down via the virtual control. I feel it is more a bug in the 3500 itself

Perhaps its time to get in touch with Uniden to see if they have any solutions if I can find a support site

It is possible that the software is at fault. All radio programming
software should validate its payload before it will permit uploading. It
is possible with some radios for software to write a corrupt payload
which will render the radio completely useless, so much so that it
cannot even be reset and so has to be returned to the factory.

Perhaps you would like to upload your file to the files so we can look
at it.

Tone.

Hi Zack,

Just saw this thread and you are not the only person with the problem. I have the exact same issue. It is very annoying when you are scanning airband when travelling and suddenly lose everything. I am using the Butel software but I agree that it does not seem to be linked to that. If I shut out all the groups in a system I get the 'Nothing To Scan' message and the asterisks in the Group listing get replaced by hyphens. I agree also that the only way to recover is to connect to the computer and reload the profile. The fixes listed earlier in this thread did not work for me.

Is your serial-number close to mine - I have 74000250

I also have a BCT15. Just tried to replicate the issue on that and it has the same issue!!!

Regards

Adrian

Hi Francois,

I think that your second suggestion works for me.

Zack, try the following:

- Press and hold function key F and rotate scroll control knob
until that you see the □offending□ system

- At this stage, I see asterisks instead of hyphens in the Group
area

- WITHOUT releasing the function key, press the group numbers and
they may re-appear (If you release the function key, the hyphens return)

Thanks Francois, great stuff

Regards

Adrian

From: deefadog1
Topic: 118 Message: 118

Hi All

As a total newcomer to both scanning and the 3500 I am looking for a bit of help and information. I have set up 3 new systems all with quick keys, When the 3500 is scanning the 10 custom searches if I hold down the scan button and the quick key number button I was expecting it to jump to that particular system but it just carries on scanning the 10 custom searches, is this correct and is it just scanning my quick key search in the background till it finds a hit, or is my 3500 faulty. Any help or advise would be most appreciated.

120. Unblock 3500

Yahoo group: UBC3500XLT

From: Aubs
Topic: 120 Message: 120

Hi all,

On the main group page (http://groups.yahoo.com/group/UBC3500XLT/), it mentions "25-1300 MHZ UNBLOCKED"... Does this mean there is a way to unblock the certain frequency ranges that are currently blocked?

Thanks,

Aubs

If someone can translate this page, it may be useful...

http://www2.scanner.nu/forum/forum_posts.asp?TID=11626&PN=1&get=last

The subject is UBC3500 and the contents of one post is:

"Firmware version
Version 1.00.04"

.NU is the Country Code TLD for the South Pacific island-nation of
Niue, if that helps anyone?!
It may be in the language of one of these countries: Sweden, Denmark,
Norway, the Netherlands or Belgium (Swedish, Danish or Dutch)

It means that it is a genuin EU version of UBC3500 that does not have the gaps that I belive the AUS version has.

No one have found a way, to my knowledge, to change the firmware in the new upgradable Uniden scanners and even less so to change the frequency range which is even trickier to do.

Ubbe.

It is a swedish scanner discussion forum. This thread is about the UBC3500, it's pros and cons and comparison to the US version BR330T and other scanners.

It just says that the EU version has a firmware version of 1.00.04 and to this date there haven't been any updates for Unidens EU version of scanners.

The UBC3500 would benefit from the same change to the squelch and AGC that the BR330T got in it's latest firmware.

Why Uniden doesn't give all scanners the same features are a strange policy to me. The BR330T needs do-not-disturb and UBC3500 needs squelch and AGC upgrades. Both scanners needs temporary lockout.

Ubbe.

Hi Ubbe, thanks for your reply.

I see what you mean, but afaik, all the UK versions go from
25-1300MHz, but with gaps between 512-806MHz and 960-1240MHz so
technically still not unblocked for the complete range of 25-1300. OR
should those gaps be for the AUS market and the UK/EU market should be
the complete range, unblocked?

Thanks for this reply also, and your translation ;-)

Any ideas where Uniden would post firmware updates, even if they did
create any for the EU?

It is a strange policy of removing some features for one market than
another, but sadly Nokia do this with their mobile phones all the
time, even within the same country!

127. Fast frequency change

Yahoo group: UBC3500XLT
Date: 2007-07-04 16:14:22 UTC
From: dastardlish
Topic: 127 Message: 127

When I follow a plane across an air traffic control boundary I need to switch to the new frequency given to the pilot by the controller. The pilot can switch in a couple of seconds or
so and I need to, too. I don't need to record the old frequency.

Switching frequencies on the 3500 is a slow cumbersome business. Does anybody know a quick way of doing this? I have an old AoR 2002 where all I do is key the new frequency and hit Enter. That would be ideal.

Oddly enough last week whilst using the European version of the Butel 3500xlt Pro software a box came up and announced that it was looking for updates and took me to the US Uniden site and then flashed up "no new updates" or somthing similar. I find it very strange as it has never done it before.

Maybe it was just the software checking for updates not realising the version of scanner connected? Or if the software is set to periodically check and on this occasion sent you to the site because it hasn't been able to find an update for so long, and wanted you to look yourself? - Only a possibility, so sorry if it's wrong ;-)

Did you get the site it took you to? - uniden.com/downloads or similar?

It is a mystery. It could have been my 3500xlt looking for a firmware update as it was plugged in and running on virtual control at the time or the software itself. As it took me to the Uniden site I suspect the 3500xlt was searching, if it had been the software it would probably have took me to the Butel site, but who knows? I get the feeling there is a lot missing from the manual.

The only other thing was I registered my 3500xlt on the US website even though it is not listed there so there could be a possibility that they may have planted a cookie on my system to search for updates or something similar.

Checking my history it did take me to a downloads page:-

http://www.uniden.com/my/downloads.cfm

but there is no mention of a 3500xlt. Somewhere there is a lot more info on the 3500xlt to be revealed I believe.

133. UBC3500XLT - Operating Specification

Yahoo group: UBC3500XLT

From: Aubs
Topic: 133 Message: 133

I've been looking for a copy of the "Operating Specification" for the UBC3500XLT, I've got copies for other radios, but one is not to be found for the 3500... Any leads people?

This is NOT the user manual or the quick user guide, but basically the computer control codes that are used to communicate between a Computer and the Scanner.

I'm guessing the one for the 3500 will be very similar to the other ones, but would like to get my hands on the official document, if one exists!

Regards,

Aubrey

135. Selectivity?

Yahoo group: UBC3500XLT
Date: 2007-07-06 12:49:38 UTC
From: ballabeg2002
Topic: 135 Message: 135

I have had my 3500XLT a couple of months, and am Not Happy with the selectivity! At Manchester Airport, the approach and tower frequencies are quite close - 118.575 and 118.625 - my scanner picks up both frequencies at once. The same happens between 121.700 and 121.850. Has anyone else experienced this? I've returned the radio to W&S for investigation. I have several other receivers and none of them have this problem...

Simple description is...

Duplex means BASE transmits on one frequency and listens on another (the handheld frequency is the other way round) so both people can transmit and recieve at the same time... As in a normal telephone conversation.

Yes you will have to program both frequencies into your scanners' memories in order to hear both sides of the conversation.
Then you have to flick between both frequencies to hear the full conversation unless you have a DUAL receive scanner similar to the ICOM R20 or The Icom IC-E91 radio which has literally two scanners in the same radio unit. (you can then listen to both sides of conversation at same time on one radio.)

Hope this is understandable when read??

regards Scott

The aerial for the control room will be higher than that of the ambulance so that may be the reason. The control room can hear the mobiles but you may not, for example if you are at the other end of the county to which the ambulance is, or if the ambulance is in a ditch.

Similar to airports. The plane is high in the sky so can be heard over a long distance. The Air Traffic Control is low down and there may be obstacles between you and it.

Duplex is also another reason.

Speaking for the ambulance service here in Scotland YES they operate duplex around 166Mhz with I think it's an upward shift of 4.5Mhz for the corresponding duplex freq (around 170.500mhz).
Also you will only hear the ambulance side of things if your scanner is close enough to pick it up.

Thanks, Dudley, but yes, I've tried every combination of the attenuator and the squelch to try and resolve the issue. (In fact it is not as sensitive as my DJ-G5 dual band transceiver, which also covers the civil airband). The Maycom 108 works fine, as does my old Icom IC-R100. I wanted the 3500 for it's coverage and the close call facility, with a view to disposing of some of the others. I can't believe that it's as bad as it seems, especially having been influenced by the good press it's received!

Its 4.8MHz split.

Heres a better explanation of "Duplex":

"Duplex" means 2 of a kind at the same time.

IE 2X channels, or frequencies.

You don't need to have both sides of the 'conversation' or
frequencies programmed in your reciever or scanner IF the base
station is on "talkthrough" all the time, like 99% are now.

This is called a 'repeater'. This is basicaly 2 radios where one
recieves on one frequency, and another transmits on a different
frequency what it hears on the first.

By this I mean, the base station instantly upon recieving the
handhelds or mobile signals (frequency or channel) 'relays'
or 'repeats' the same signal (audio) on the 'output' channel or
frequency.

Taxis never used to be able to use 'talkthrough', ie all cabs hear
and talk to the other cabs, but that seems to have changed as they
can now all tell each other about speed traps etc...

I hope that clears up a few points..

N.

144. USB Cable

Yahoo group: UBC3500XLT
Date: 2007-07-12 12:22:48 UTC
From: Aubs
Topic: 144 Message: 144

Hi,

Just wondering what people's opinions are about the USB cable available?

Where can I get one from, for the cheapest price? - Are the USB cables for all unidens the same? One serial cable fits both USC230 and UBC3500XLT so would it be adequate to say that it will fit?

Many thanks,

Aubrey

I bought the USB cable from Butel which wasn't cheap. Was in a hurry to buy the software and cable as my 3500XLT was on the way. I bought a BCT15 afterwards and the same USB cable worked on that

Hi Adrian,

Can I ask how much you paid for it?

I've seen it available at scannermaster (http://tinyurl.com/2g64dh)
and costs $29.95 and if you add P&P (or Shipping & Handling, as they
prefer to call it!) it comes to $47.95. Using the post office'
exchange rate this works out as £25.86

Butel are doing them (http://tinyurl.com/yoso76
) for €39.95 or £27.57 (don't know if this is a guide price as with
the PO exchange rate, it works out at £28.47) + P&P (€7.95) totalling
€47.90 (£34.13)

so getting it from the US works out to be £8.27 cheaper! Not a huge
amount, but based on the total price, a 25% reduction!

Anyone better it?

From: Scott
Topic: 150 Message: 150

Hi All,

decided to sell my Icom IC-E91 handheld. Anyone want to buy it before I put it on ebay?

http://www.icomuk.co.uk/categoryRender.asp?categoryID=3510&cCID=6155

It's 2 -3 months old boxed as new with optional leather protective case included. It's been used as a scanner with very light use.. maybe 6 hours use at most. Only charged it up 3 times in the whole time I've had it.

Cost me ?239 plus the ?20 for the case.

selling for ?200 on ebay.

anyone interested contact me off list at gw536@... before sunday.
I accept Paypal payment

cheers Scott

From: Aubs
Topic: 154 Message: 154

Hello all,

Has anyone bought anything from grove-ent.com ?

I'm looking to get a USB cable from them (
http://www.grove-ent.com/unidenusbcable.html). It says it is compatible
with the SC230 and according to butel (
http://www.webbedingen.com/uniden/USB_PC_cable_for_Uniden_USC230__UBC3500XLT__E_art_30.html)
the cable for the SC230 is compatible with UBC3500XLT.

Works out at $49.95 (?25.77) whereas butel's one comes in at ?45.90
(?32.51). - Not a huge saving, ?6.74, but every little helps!

I think they are either involved with or responsible for the magazine
'Monitoring Times'.

Would be grateful for any responses, the sooner the better as I would like
to order it before I go home tonight!!

Thanks,

Aubrey

Hi,

Thanks for that. The site shows it as

Uniden cordon 3500 USB [3500-PC-USB] 39,00?

which is a similar price to the one from butel (?45), but that also has
Shipping on top.

Regards,

Aubs

Hi Everyone

I've just joined the forum and look forward to participating in discussions. I don't actually have my 3500XLT yet - but will getting delivery early next week and I'm keen to get going.

Being a dab hand with a soldering iron etc and being averse to getting ripped off (aren't we all) - I would like to make my own computer cable. I know I saw a schematic on the web somewhere yesterday - but I cannot find it again despite much searching. Would someone here please be able to help with some pointers.

Many thanks,

Steve

The plug on the scanner side of the cable is tiny even if you could get a plug that small yourself you'd need a needle to solder it... good luck if you do decide to make one. I'm talking almost FIREWIRE Sized plug.

I have definitely seen one where someone explained that a cable with the right plug on the end can be bought with something for a couple of pounds and then do something with it, but I can't for the life of me remember where...

Will have a scan around and see if I can find it.

I made my own from a power lead which was supplied with one of those
commonly found MP3 transmitters. You can buy the lead with a free FM
transmitter for around ?8. The interface does not involve any voltage
translation so all you need to do is solder a D plug to the cable.

Thanks everyone - and Tony in particular. That was indeed the site that
I had previously seen:
http://homepage.ntlworld.com/tony.ling/radio/reviews/ubc3500xlt/3500interface.html

I'll let you know how I get on.

169. Tone coded squelch

Yahoo group: UBC3500XLT
Date: 2007-08-14 08:19:01 UTC
From: kens_spaniel
Topic: 169 Message: 169

Can someone please enlighten me a bit please with a bit of advice on the ctcss . My question is - is that if i enter the correct ctcss code for the channal for example 67.0 for cha.1 on pmr 446 as here: http://www.delboys446.co.uk/ on my 3600xlt it then blocks this channal out if i then enter the ctcss codes for all 8 channals on pmr446 it blocks them all out. If i switch ctcss OFF on the scanner then the scanner will listen to all of them or have i got the wrong end of the stick as i am new to this squelch system. Tnx for a reply.

From what I understand:

If you set the tone 67.0 on a channel, you will only receive transmissions that have that same tone transmitted with the voice transmission. If you do not have any tone, then you will receive all transmissions on that channel.

this site:

http://homepage.ntlworld.com/tony.ling/radio/begin/ctcss.htm

may clarify it for you.

but... I would also like someone to clarify this for me, as I don't want to program a freq with a tone, only to find out that I will not be able to receive any other transmissions because of the tone!

Yes,engaging CTCSS on a channel blocks out all transmissions which don't use the tone in question. That's exactly what it's meant to do. With the UBC3500XLT and others, you can select 'Serach' and it will allow you to hear the traffic and decode the tone and display it. You can also lock out a subtone so it will receive all traffic except the one you have selected.

Tone.

Hi
I've tried this with mine. If you're too close to the 3500 the 446
transmitter blocks the receiver and it can't hear the tone.

I found getting someone else to transmit from further away, the squelch
opened ok.

Weird!
Richard

Menu --> Program System --> Select the system --> Edit Group --> Select the Group --> Edit Channel --> Select Channel --> Set CTCSS/DCS -->

make sure it is either "OFF" or "CTCSS" or "DCS" - Definitely NOT "Set Lockout".

From Tone's last message, I can't see any way of blocking (or accepting) multiple tones though, if that is possible. I suggest not.

The only way thats possible Aubs, is to have multiple channels on
the same freq but on different tones I'm afraid.

Would be nice to have multiple tones with different alpha tags on
the same channel.
Shame butel or uniden isn't as responsive as Rob on the 'tool group!

Neil.

Hi all

I just ordered my UBC3500XLT online it's now Friday afternoon (17/08/2007) I hope to take delivery on Monday morning!!

I've been out of scanning for around 10 years now and am looking forwards to getting back in!

I live fairly close to Leeds & Bradford in the UK and Manchester so I'll be listening into these on a regular basis.

Does anyone have any hints or tips on this scanner? Is it as good as they say it is?

Any frequencies for my area or web links also appreciated.

Thanks for reading and bye for now.

Hi all, hi Michael I've ordered my 3500XLT yesterday!!!! I live in ITALY near Milan and I'm a radio ham and a technician for the ITALIAN RED CROSS comm dep.!!! The UBC3500XLT seems a vy nice radio! I have some other scanners and so I'll try to compare them!
happy listening!!

Hi

My wife and I spend a lot of time in Venice, we were there a couple
of weeks ago. We both love Italy, it's the most beautiful country in
the world, the food is fantastic too!!

Good luck with the new scanner!

Hi Tom

try this link....

http://myweb.cableone.net/marksscanners/3500/3500.html

i had no trouble setting mine up its quite easy once you know how..
This seems to be a very good guide for people just starting out on this scanner.

Hope it helps you.
Have fun

Mark

You shouldn't be disappointed with the 3500. I've not had a huge chance to play with mine but I'm still loving it!

One of the best things I could advise is NOT to buy any software for it as yet because there's a great guy in the middle of developing one that looks like it's going to be a great FREE asset! www.bcTool.org is the site. It's only at Beta stage, but a general release shouldn't be too far in the coming!

This is a very useful easy to navigate manual:

http://myweb.cableone.net/marksscanners/3500/3500.html

Also a good review of the scanner, with some good tips can be found at:

http://www.ukmidlandscanner.co.uk/uni3500.htm

Hope everything goes well.

Hi guys
I have recently retired to the UK from South Africa and have always
been interested in scanning. I have Icom 8500,AOR 3000A and to day a
new Uniden UBC3500XLT.Can someone advise me how to set it up for the
first time (read the manual will be the reply) but I have problem
getting to the toilet with out my GPS HI HI,or were to look for
advice
Regards to all
Tom

Hi Tom,
welcome to the land of humidity. You've got some good kit there, you
should have a lot of fun with it. Melvyn's got a good site on the
Unidens <http://www.ukmidlandscanner.co.uk/reviews.htm>
I've scribbled a few notes in the global village here
<http://homepage.ntlworld.com/tony.ling/radio/reviews/ubc3500xlt/ubc3500xlt.html>
The Unidens are a little different to what you might be used to but
after a while you wonder why so many others didn't think of it before.

Give us an instance Tom, what are you trying to acheive

Best regards and the occasional springbock
Tony

Howzit Tom!

This is the place to head for:

http://myweb.cableone.net/marksscanners/3500/3500.html
(http://myweb.cableone.net/marksscanners/3500/3500.html)

Much easier to follow than the handbook.

Enjoy.
Richard

Ken,

There's another piece of software that controls the majority of Unidens DRM scanners...

It is absolutely wicked! - Does (or will when it's complete) everything you will ever need it to do!!

www.bcTool.org

Hi Steve,

If you can download the programming information from your icom into a CSV file, then you may be able to upload to uniden scanners using bcTool (http://www.bctool.org).

Tony (another member of the group) has written this site which may help with the cable:

http://homepage.ntlworld.com/tony.ling/radio/reviews/ubc3500xlt/3500interface.html

All the best,

Aubs

I suggest you make a standard RS232 serial cable for those devices you wish to use. Then you buy a generic single USB-to-serial adpater that then can be used with all PC's and all RS232 cables.

Original RS232 cables for scanners are cheap to buy and most of them have pin-outs that can be found on the internet. If the generic USB adapter breaks down you only buy a new one for something like □20 $25 or £7. If you make your own USB cable and it breaks down you'll have to resolder the cable to the USB, if you can find the exact same type again, which seems to be a problem after one year.

Ubbe.

From: Peter
Topic: 199 Message: 199

I'm all ready to buy one of these radio's to go with my Icom R5. There are just a few questions I would like answered first.

1.Is it possible to change to any mode, any step on any frequency?
2.How long do the batteries last?
3.What's the cheapest place to get one
4.What's the cheapest place to get the programming cable?
5.Is there any good free software?
6.Am I sounding like a tight a...?

Any answers most appreciated!

Peter

1) Yes
2) about 6 hours in my experience.
3) try ebay, the cheapest i have seen recently new is £143.00
4) as above, i paid about £15.00 for mine.
5)yes, BCTool, which i still in Beta stage at the moment but very near to
completion and allegedly a lot better than the Butel software.
6) no.

206. Getting started

Yahoo group: UBC3500XLT
Date: 2007-09-27 15:14:53 UTC
From: Peter
Topic: 206 Message: 206

I know I need to spend time with my new 3500 to get used to it but my first impressions are `Wow, forget everything you knew before!'

One thing I would like to know is how do I simply type in the frequency I want? I.e. 133.6000? I also noted that as it is (straight out the box) it seems to scan by default with the user having to stop it when necessary, which is upside down to how my djx10 and R-5 works! I have a cable coming tomorrow and I'm going to try bctool to help me set things up!

BTW I got my first CC hit as well. It was from a NRN transmitter about half a mile away.

Peter

Hi,

To directly enter a frequency, press hold to stop it scanning, enter the frequency and then press hold.

This site might be useful, yes its for the 330T and 396 but ignore the sections on Trunking and its the same as the 3500.

<http://myweb.cableone.net/marksscanners/330/330test.html>

Hey all!

Aubs from Chesterfield/Sheffield here!

Alan, a couple of weeks is a long time to wait... Have you already ordered it or are you waiting for pay day? - I'd have thought (as has been mentioned on another group) you would be able to order with next day delivery?!

Don't forget your PC connection cable too... Then take a look at www.bcTool.org - Excellent piece of control/logging/programming/recording software for many Uniden DMA (Dynamic Memory Architecture) scanners in development.

All the best,

Aubs

Couldn't tell you, Alan, I've not got an external aerial... That may be my well be next purchase!! ;-)

I would imagine the higher the better!

Good luck and I know the feeling of excitement when I went to pick mine up from a local shop!

Hi Peter :-)

http://myweb.cableone.net/marksscanners/3500/3500.html#search%20close%20call

Look at the "Set Step" option.

Additionally, make sure you have band plan 3 set. When you turn your radio
on, it should say "Band 3" on the screen.

If it doesn't, turn it off again, press and hold number 3 then turn it on.

This will set the default steps which should mostly be relevant to the UK.

From: Peter
Topic: 222 Message: 222

Hi all

I have a taxi firm on 164.6875 in the Qck Save Grp and I'm wondering how to find the CTCSS tone. I get a little C with the tone under the frequency under the close call frequencies but nothing here. I am *guessing* it does have a tone!

Peter

guessing it does have a tone!

Hi Peter, if you hold on to the frequency then click on yes, then scroll
down to set ctcss/dcs click yes again, then you can either enter the tone if
known or click on search and then click on hold again to take you back to the
frequency in the qck save grp. The next time there is a signal on the frequency
the tone will flash under the frequency so you can then go back and enter
it. Hope i have explained this easily for you.

Topic: 224 Message: 225

If you have it set up as different systems for each, so Civils are one system, Mil another, and PMR another, then assign quick keys to each of the systems then, you can press the number on the keypad to turn each system on and off.

If they are groups within one system, so the system is AIR and within that, the groups are Civils and Mil, then add a quick key to the groups. When the system is active and scanning, pressing Fn + QK number turns the group on and off.

There's a very good 'Easier to Read UBC3500XLT Scanner Manual' here:

(http://myweb.cableone.net/marksscanners/3500/3500.html)

Top right of the contents links to quick keys

Hope this helps.

Shout if you need any more.

Thanks for the reply Aubs

I have (for example) Airband as a system and Civil, Mil Air and
Tactical as groups. Do I need to have a quick key for the system
(Airband) and for the groups?

Thanks

P.S. I'm useing bcTool to programme it!

227. Re: [UBC3500XLT] Re: Scanning a group

Yahoo group: UBC3500XLT
Date: 2007-10-01 15:13:33 UTC
From: Aubs
Topic: 224 Message: 227

Set quick keys for each of the systems and groups:

[1] Airband
|- [1] Civil
|- [2] Mil Air
|- [3] Tactical

[2] General
|- [1] PMR
|- [2] CB

Something like that.

Then, when Airband is being scanned, 1 will flash on the top row.
Press 1 to turn the Airband system on and off. This controls all the groups
below it
When airband is scanning, press and hold Fn then press either 1, 2 or 3 to
dis-/en-able each of the sub 'groups'

Similarly for General.

This way, you can decide if you want to listen to Airband at all or just the
rest

HtH!

Topic: 224 Message: 228

Hi Peter,

The quick keys for Systems and Groups are independant.

For example, lets say you have the following systems/groups (name quickkey:number)

Airband Q:1
--Civil Q:1
--Mil Air Q:2
Domestic Q:2
--CB Q:1
--PMR 446 Q:2

So above we have 2 systems and each system has 2 groups.

During a scan you can press 1 to lock Airband out which locks out all groups contained within (Civil and Mil Air) same again with pressing 2 to lock Domestic. You press the number again on the keypad to unlock the system. However, lets say you wish to lock out Mil Air group but want to continue listening to Civil.. like Aubs' said, you press Func + 2 to lock out a group (assuming that Airband system is active on the display, else you need to turn the Dial knob to the system, then press the number (quick key) to lock out the group required.

Hope that helps clear things up.. you will grasp everything eventually, it took me 2 weeks to get my head round all the functionality this scanner has to offer... give the manual a few reads and experiment.. it'll all click into place.

Good luck.

PeterW

233. Stub antenna

Yahoo group: UBC3500XLT
Date: 2007-10-09 19:36:33 UTC
From: Peter
Topic: 233 Message: 233

Has anyone ever used a really small (2-3inch) antenna on their 3500 to help keep it hidden? Even with the supplied antenna I find it difficult to bend over or move about without it sticking out. While we are on the subject what are people's experiences with different antennae? I have a SuperGainer which is about three times the length of the supplied antenna; A telescopic antenna which is about 5-6 foot long; A small whip from a Alinco DJX10 and another SMA antenna from my Icom R-5 which I guess might be a bit better for VHF as it's a inch or two longer.

Plus my really good (In my opinion!) 125 and 300Mhz Dipole I made.

Peter

I got a small MALDOL antenna from Melv (cost about £16) it's about 3 inches tall. VERY flexible even though it's as thick as your finger. It works great and fits the 3500 perfectly. It's an SMA connection. It would allow you to fit your scanner with the antenna in an inside pocket without sticking up through the top and being visible.

Ask Melvyn if he has any left (he bought a whole bunch of them at one point to sell on to all that had 3500 scanners)

details : MH-255
VHF/UHF Handheld Antenna
2:1 or less SWR: 153-157/460-470MHz
Wide range receive: 118-960MHz
Max Power: 5 watts
Length: 3 inches
Connector: SMA-male

contact him through his website at info@...

website: www.ukmidlandscanner.co.uk

hope this helps you.

Hi Peter
I'm scared of breaking the SMA connector which apparently sometimes happens when you use the belt clip and you sit on it! Melv was selling some stubby ones I believe. The 3500 seems to cope with a wide variety and my discone works just fine unlike the MVT-7100 which gets completely overloaded.

Hi Paul!

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=110179151006
There's one for you. Don't think you'll find them much cheaper than that
(not saying you will not though!).

What ever you do, do not buy the Butel software! - Take a look at
www.bcTool.org and if you join the Yahoo group someone has uploaded the most
recent drivers to the files section.

bcTool is a FREE programming software for Uniden scanners including the
3500XLT. Read the site (above) for more info.

Good luck and happy scanning :-)

Yes, it goes in just above the power plug. The interface lead is device
specific and Craplin don't sell such a thing.

244. New scanners (GRE) with "Spectrum Sweeper"

Yahoo group: UBC3500XLT
Date: 2007-10-21 16:53:47 UTC
From: radiotechscan
Topic: 244 Message: 244

.

There´s a few new scanners out...made by GRE
They include digital (APCO)decoding
and a feature called "Spectrum Sweeper"
wich might be similar to Uniden´s "Close Call"

After reading a user-manual i was not able to
fully understand the workings of "Spectrum Sweeper"
and could not determine if it is any good or worse
or maybe even better then "Close call"
At first hand it seems to do only a predetermined
1 Mhz piece of band...but i am not shure of that.

No idea yet if they are out in Europe

GRE-USA :

http://www.greamerica.com/scanners.html

Portable model PSR-500:

http://www.greamerica.com/PSR-500.html

User-Manual PSR-500:

http://www.greamerica.com/download/manuals/PSR-500V1.9_Manual.pdf

If any one knows more on GRE´s "Spectrum Sweeper"
specially compared with "Close Call" let me know.

Thanks !

Radiotechscan (moderator)

.

Found a little more info on "Spectrum Sweeper"

http://wiki.radioreference.com/index.php/Spectrum_Sweeper

And indeed it seems to do only a 1 mHz band at the time,
After it finds "energy" in that 1 mhz wide band it will then
fine-tune (scan) that band and then let you hear the audio
...it seems to me that that procedure will take up some time
and therefore the whole thing might be kind of slow (compared to
close-call).

Also the fact that it does only a small 1 mhz band
does not mean that it it is more sensitive then
close-call...since it still uses 1 of the much wider
front-ends (bandfilters)...wich are about the same as in
any other scanner.
It would be much more sensitive if the bandwidth of the front-end
would also be only 1 Mhz...but i dont think that is the case
..since that would need hundred´s bandfilters.

So at first sight without any practical experience
"Spectrum Sweeper" is by far not the same as "Close Call"
And probably not very usefull as a general tool for finding
completely unknown frequencies.
...allthough it might be usefull if the specific 1 mhz wide band
is already known...but in that case you could just as well use
a normal scanner (with max sensitivity) since oldfashioned-scanning a
1 Mhz wide band would take no more then a few seconds anyway.

Above is all from reading and not based on user-experience.

Since i dont know how exactly the scanner "finds energy" in that
1 Mhz band i cant really tell how good that will work until i have
seen the schematic...but again any type of "nearfield" finding
seems to me of not much practical use since you better use a fast
scanner and have it scan that 1 mhz band in less then 2 ~ 3 seconds.

Some scanners have tunable filters, like the BC780 that have varicap tuned filters for 108-137Mhz and 137-174Mhz. So I wouldn't rule out that more narrow filters can be used to make Spectrum Sweep more efficient.

Ubbe.

I'm going purely from the name here and the brief description given. Is this not the same as the spectrum offered on the Alincos and some Icoms such as the R-20? in which case it's low sweep rate is not able to provide any functionality in the way that you would hope from a spectrum analyser, and not in any ways comparable with Uniden's Close Call function.
I should click on the links now :P

Hi
I am new to scanning and purchased the UBC3500XLT off e-bay, trouble is I don't know how to work it! Tried reading lots of literature and manual to no avail......it's like foreign language! One thing I did was to initialize the scanners memory to start fresh but have I gone too far with this move as now all it says is "nothing to scan". Is there anyone who can talk me through setting it up? Would be grateful if some one could help! With a phone number I would phone you from my end (UK only!!!!)
Dave

Hi

I have just got the scanner on Wednesday of this week.

And like you are find it hard to use, I have been using scanners for a lot of years.

But found this web site a great help today.

http:///myweb.cableone.net/marksscanners/3500/3500.html

Hope the web site helps you, if I can be any help send me a email.

Dave

Hi Dave

first thing first, the scanner you have brought is a very nice piece of kit but it will take a bit of getting used to. I've had mine for almost a month now!

if you have 'nothing to scan' that would suggest that there are no frequencies within the memory. I'm afraid I cant tell you how to enter frequencies via the radio as I use a free (beta) programme called BCTool which makes life a LOT easier.

I can give a rough explanation of how the memory works which is one thing that gets people stuck:

The memories are divided into 'systems' (for example, Airband) and 'Groups' (e.g. VHF Comms, UHF comms, tactical)
every system has a 'quick key' (e.g. 1, 2, 3 etc) which will turn that system on or off. On means it will scan that system and off means it will not scan that system. Each group within the system can be turned on and off by pressing the func (top, left) button and a relevant button. So if I want to just scan the tactical frequencies (in my case) I would press the func button and 1 & 2 so the scanner will only scan the tactical channels.

On my scanner I have the following systems:
Airband
Fire & Ambo
Marine
PMR
Railway

I can select which system I want to scan (say, railway & PMR) and the scanner will scan through all those frequencies. Within the PMR system, if I don't want to scan the UHF and 446 frequencies I can turn those groups off, just letting it scan the VHF frequencies.

The BIG advantage of this is that with other scanners you have memory banks with a fixed number of frequencies you can put in and often can only scan one bank at a time. Not good if you have 56 frequencies and only 50 channels!

How other people set their systems and groups up will vary, I have done mine in a way that I believe is logical.

I hope that goes some way to getting your head around your new toy! My pill is kicking in so I'm off to bed! Don't be afraid to ask anything!

Peter

Peter

Many thanks for the email.

Yes a very nice scanner

I think I am getting on very well with it.know.

Hope to get it connect to the computer in a few weeks when I get a cable.

All the best and thanks for your help.

From: paul
Topic: 252 Message: 252

hi all can someone tell me or show me a step by step guide to sending data to my scanner from the pc

Iv made my groups up for what i want just now need to send them to the scanner.. it saves on doing them by hand

do i have to make a profile or a systerm or group or something..

Many Thanks
Paul

I have one system's folder with one groups folder with all the airport freqs on (southen airports) now i want to add a group folder so i have two of one system folder so i can add all the london tcc freqs (willo/avant etc) then when am done i just press SEND DATA then a box cums up but there is nothing in it to send..

I can read from the scanner no probs..

Hope this helps lol

many thanx

What software have you created the systems/groups/frequencies with?

If it's bcTool (see http://www.bcTool.org) it should be self explanatory...

Ahh, no idea then, sorry!

May be worth you trying it with bcTool...

Very simple to use, plenty of support and is being written by a very
enthusiastic person etc.

Oh and it's free :-)

259. Using scanner and pc with "extended" cable link ?

Yahoo group: UBC3500XLT
Date: 2007-10-31 08:43:22 UTC
From: vlieghe2000
Topic: 259 Message: 259

Hello all,

I wonder if some of have tried to modify the original cable lenght
linking the scanner to the pc. I bought mine in the BuTel kit (serial
plug).
I would like to drive my scanner in the attic, from my pc located
two level below. It would be approximatively 8-10 meters (20-30 feets).
This would suits me best !!! Short coax cable, no pc interefence
close to the scanner and antennas ...

So, what about cutting and extending the original cable ?
Or, put a USB-Serial adapter, then plug an USB extension cable ?

Of course, any experiences regarding this would help me a lot !

Thanks,

L@urent

You just need a serial extension lead, although 10m is getting near the
boundary of the maximum workable length for RS232. You should have no
problems at lower baud rates.

.

If you use USB cables then the official max length is stated 2 meters
this is true in practice ..i once tried 3 meters to a printer and
it wouldn´t work.

Now these days you can get USB-repeaters wich extend the max length,
do a Google search for "USB-repeater" and see what length is possible.

It seems OK to use several USB-repeaters in series to get even longer
lengths.

USB-repeaters are usually integrated inside the connector of such a
special cable.

265. 3500XLT systems and groups

Yahoo group: UBC3500XLT
Date: 2007-11-10 16:51:44 UTC
From: Dave
Topic: 265 Message: 265

Could someone show an example of how they have setup there systems and groups just to get me started. This is all new to me as I am used to using banks.

266. Re: [UBC3500XLT] 3500XLT systems and groups

Yahoo group: UBC3500XLT
Date: 2007-11-10 17:29:52 UTC
From: Aubs
Topic: 265 Message: 266

As an example:

```
[1] Airband
|- [1] Civil
| |-Freq01
| |-Freq02
| |-Freq03
|- [2] Mil Air
| |-Freq04
| |-Freq05
| |-Freq06
|- [3] Tactical
| |-Freq07
| |-Freq08
| |-Freq09
[2] General
|- [1] PMR
| |-Freq10
| |-Freq11
| |-Freq12
|- [2] CB
|-Freq13
|-Freq14
|-Freq15
```

The numbers before the "Airband" or "General" are the System Quick Key numbers and
The numbers before the "Civil" or "PMR" etc are the Group Quick Key numbers.

Note the numbers are there purely to demonstrate the setting up of quick keys and not used in the system/group names.

Hope that helps a bit!!

268. Scan/search

Yahoo group: UBC3500XLT
Date: 2007-11-24 10:25:48 UTC
From: donefor2001
Topic: 268 Message: 268

Hello all,
I have been able to 'scan' and 'search' quite indepentedly but
now when I want to scan my systems and groups only, on pressing 'scan'
the receiver goes through all the 'custom searches' and the 'systems' I
am not able to stop the 'custom searches'. Please anybody any ideas??

Thanks,

Roger

Turn custom searches off.

This is an 'easier to read' manual for the 3500:
http://myweb.cableone.net/marksscanners/3500/3500.html

in scan mode Press and hold Func then press Scan/Srch.
At 'Quick Search?' press E/Yes.
You'll note the bottom line has 1234567890 (for the 10 custom searches)
press 1234567890
That should turn them all off.
Now press Scan/Srch.
Hopefully they'll not be used.

I've not used my scanner for a while, so not 100% sure if the above is
right.

I'm sure someone else will post if I've made a mistake!

271. System hold time setting

Yahoo group: UBC3500XLT
Date: 2007-11-25 13:06:46 UTC
From: g_a_white
Topic: 271 Message: 271

I just wondered what other people set for the system hold time? do you leave it on the defualt 2 seconds, or change it? i've changed mine to 0 thinking it'll give me the fastest scan time, but is there a possibility im missing anything? or does it still scan everything in the system?

Opinions?

272. Re: [UBC3500XLT] System hold time setting

Hi

I've changed mine to 0 hold time. It will scan all the groups in the system
and move straight on to the next system. If yopu have a hold time it will
return to that system and scan it again for the duration of the hold time
before moving to the next system.

Regards
Richard

I think I have mine set to 0 also.

From the easy to read manual (
http://myweb.cableone.net/marksscanners/3500/3500.html#set%20system%20hold%20time
):

Set Hold Time sets (in seconds) the amount of time the scanner will scan
the system before moving on to the next (unlocked) system. If you select 0,
the scanner stays on the system for at least 1 second. For conventional
systems, all unlocked channels will be scanned at least once regardless of
this setting. The scanner moves to the next system after the hold time
expires, any current transmission ends, and the channel delay time expires.
The default setting is 2 seconds for each system.

So each unlocked channel will be scanned at least once regardless.

This way, it scans each channel once then continues to the next system -
Just like how it worked with banks on older scanners, if you're familiar
with them.

275. Another hold time question

Yahoo group: UBC3500XLT
Date: 2007-11-26 16:05:31 UTC
From: g_a_white
Topic: 275 Message: 275

Another probably stupid question.

I've only got 4 systems stored at the moment, not many channels in each. All system hold times set to 0.

While it's scanning, the system names usually jump from one to another pretty quick, but sometimes if i use the quick key to turn for example system 1 off, the names seem to stop moving so quick, is that normal? it looks as if it's staying on each system longer than usual? i dont think it really is, but appears to be.

276. Re: Another hold time question

Yahoo group: UBC3500XLT
Date: 2007-11-26 16:39:44 UTC
From: Ubbe .
Topic: 275 Message: 276

It is the slow update of the display that makes it look as if scanning is slower.

I think the display only update it's information twice a second or something and as it scans with 100ch/sec it will scan several banks between display updates. You will probably see that the system/group numbers doesn't seem to be scanned in sequence or perhaps not scanned at all and are a result of the slow display update.

Ubbe.

Get the cheap Uniden standard RS232 comport cable for you 3500.

Buy a generic USB-RS232 adapter cable that have supported drivers in Vista. Then you can use that USB-RS232 cable with all devices that need serial RS232 connections to your PC.

Ubbe.

HI Rich,

Take a look at this link:

http://myweb.cableone.net/marksscanners/3500/3500.html

It's an easier to read user guide for the 3500.

The specific bit you are after is probably the first one in the list:
http://myweb.cableone.net/marksscanners/3500/3500.html#Main_Features

QUOTE:
Scan and Search Operation- Lets you include selected service searches and
custom search ranges during normal scan operation.

The search "banks" are a global feature.

You individually tell each search bank if it should be included with scan. It then always do the search, one or several ranges of your choice, regardless of which systems are scanned.

Topic: 279 Message: 291

Go to the menu.
Select "Search for..."
"Edit Custom"

Select one of the search ranges you have programmed and push Enter key.
One of the options there will say "Search with Scan" which will let you do "Set Lockout"
and if set to "Unlocked" will include that search range together with your normal channel
scanning.

There is unfourtunatly no quick key settings for search ranges that will enable or disable
them depending of the different systems you scan. It will always search until you change
the "Set Lockout" again.

Ubbe.

293. Conventional & non-conventional systems

Yahoo group: UBC3500XLT
Date: 2007-12-06 14:18:06 UTC
From: topfuelbob
Topic: 293 Message: 293

I'm trying to find out a bit about non-conventional system types.
The official manual doesn't go in to much detail but in the "Easier
to Read UBC3500XLT Scanner Manual" it says:
> To Create a new Conventional system, press Menu.
> At 'Program System' press E/Yes.
> At 'Select System' scroll to 'New System' and press E/Yes.
> At 'Select Sys Type' scroll to 'Conventional' and press E/Yes.
> At 'Confirm?' press E/Yes.
But I don't have a 'Select Sys Type' option, or at least I can't see
one ;-)

I'm assuming, trunking systems apart, that a conventional system is a
simplex channel and there will be an option for duplex, especially
as 'Func .No' lets you listen on input etc.

If I use bctool to create a new system, I get options for:
Conventional
Motorola Type 1
Motorola Type 2
EDACS Narrow/Wide
EDACS SCAT
LTR
So can anyone point me to more reading regarding these systems as
they
apply to the UBC3500XLT and to the UK?

Thanks, Bob.

Topic: 293 Message: 294

The UBC3500XLT is only a conventional scanner, no trunking. BCTOOL supports a lot of other trunking scanners and the choises of trunked systems in the program will then be valid.

Duplex in the scanner is not as in an Icom where you can program it yourself but are fixed and adjusted for the German market and perhaps some others. It probably depends of bandplan, which you choose at startup.

Hello Tom,

Point your browser to:

http://myweb.cableone.net/marksscanners/3500/3500.html

and you'll find the "Easier to Read UBC3500XLT Manual".

That should help you on your merry way... it's very well written and quite indepth.

A lot of people do find the 3500 a pain to use at first.. but stick with it.. it's a fantastic scanner.. once you get used to how these Uniden's work you'll never look back.. you can always ask specific questions here if anything in unclear.

Cheers,

Peter

Hi Tom,

In addition to the sound advice from Peter, take a look at
http://www.bctool.org Free (and very good, but still under development -
don't let that put you off though!) PC control software for Uniden scanners.

Thank you very much Peter and Aubs, I have had a quick look at the sites you linked to, looks just what I am after. I shall post on here if I need more help.
Thanks again,

Tom.

Slowly the mist is clearing.
This is how I think it works, if I am wrong perhaps someone can correct me.
You cannot program a group to scan between two frequencies, say the top and bottom limit of the Marine band but you can set this up in a custom search. This search will enable you to capture active frequencies and transfer them to your particular group.
Perhaps using bcTool you can paste in the entire marine or air band into a group as channels.

You can do a service search which only seems to use the air band from the band plan.

It seems that you cannot assign Quick Keys to a custom or service search.

When using the Quick Keys you still have to lock out the searches that you don't want otherwise it will still scan them ☐ so why bother having Quick keys.
With luck I'll just about get the hang of it by the start of the air show season.

Hi Richard,

I thought you can use quick keys to turn custom searches on and off...

This is from memory, so sorry if anything is wrong!

Press Func+Search
Asks you if you want to do a quick search? - say yes.

Now press 1-0 quick keys to turn each custom search range on and off.

Hope that helps.

Hi Richard

Don't confuse Quick Keys with Custom Search band numbers 1-10

Quick Keys select systems, and groups within systems, set up with your
programmed channels whilst the Search keys turn each custom search band on or off
so you can select searches between the lower and upper frequencies of
selected ranges. The Service Search doesn't have any Quick Key assigned to it.
Hope this helps.

Hi Richard

Yes bcTool allows you to create a block of frequencies within a group and
gives them sequential Channel numbers. You can if you want assign suitable tags
to identify these. I have imported the Marine Band channels from here
http://groups.yahoo.com/group/Uniden-Close-Call-Euro/files/Mem%20files/
(http://groups.yahoo.com/group/Uniden-Close-Call-Euro/files/Mem%20files/)
Best of luck

Thanks everyone for your help. I think I understand how to get the freq's into the scanner and I have got most of what I want. I have also assigned quick keys. However my next question is how do you recall a specific quick key to search. The owners manual on page 50 simply states "a groups quick key must be activated to be scanned". The easy read manual goes into more detail so I will persevere for a while. If I cant sort it out I will ask again in a new thread.
Cheers
Richard

Hi Richard, to activate/deactivate the quick keys for systems press the
corresponding number on the key pad. To activate/de-activate the quick keys
assigned to groups within a system, whilst scanning press function and the
corresponding quick number on the key pad. I hope this is helpful to you.

Yep

Use a cable with 2 stereo jack plugs either end. Also a mag mounted aerial
will give you good reception.

Which Alinco??.. TBH, I would try and sell it elsewhere unless theres cash coming your way as well. The 3500 is only @ £150, its an awful lot to lose. If trading it in was the option you were going for, I would try to sell it privately first and trade it in as an absolute last resort. I reckon your dealer would have the Alinco for sale at £250. You want to be getting nearly that yourself :).

Happy Scanning, m0mol (Gareth)

315. Importing CSV to 3500XLT

Yahoo group: UBC3500XLT
Date: 2008-01-03 08:56:19 UTC
From: Shack
Topic: 315 Message: 315

Hi

Very new to this type of scanner and the groups, just trying to import a .CSV file (from an XLS spreadsheet) into my scanner. I've created the CSV showing only the freqs but when I import it the Freq appears in the CHANNEL not FREQ box.
Any help on importing freqs, tags, settings would be appreciated, maybe an example (of group) of a typical CSV file
Thanks
Regards,

Steve

Hi all.

For those of you looking for cheap earphones for your scanner / handie, Tesco's have "in ear" type earphones for 97p. If thats not a bargain I dont know what is lol. They also have some others that hang on the ears, but my tesco had none of those in, and there was no price. They have a 3.5 mil stereo plug on the end and about 1 metre of wire. They were a bit of a slack fit on me, but I'm sure will suit some of you a treat :).

Happy listening Gareth.

Funny you should say that Tone, in Boscombe near Bournmouth, when the 99p shop opened up oppisite the £1 shop, the latter almost went out of buisness! The 99p shop was so full you couldn't move in there, yet the £ shop was dead.
Shows you how tight people really are!
Neil.

Hi Tom,

when you are in the middle of a custom search, you may see that there are numbers at the bottom of the screen, one at a time will flash.

Just like quick keys, if you press the corresponding key on the keypad, it will skip that particular custom search.

When you use the lockout feature, all that does it stop the search being carried out while scanning (i.e. scanning your programmed systems/groups/frequencies).

You may also find the 'Easier to read' manual for the 3500XLT useful.

http://myweb.cableone.net/marksscanners/3500/3500.html

Hope this helps.

Hi
I followed your instructions, but am still left with one Custom
Search number flashing and searching.
If Custom Searches 4 5 6 and 7 are active and I press 4 5 6 and 7 to
turn them ALL off so that no numbers are flashing and no searches
active, it still displays a flashing and therefore active search
number if 4,5, and 6 turn off, then when I press 7 to turn it off it
does not go, but remains flashing, Seems you always have to have at
least one Custom Search flashing/active no matter what search number
it is, it won't let them all be turned off.

Tom.

Tom,

I'm abit bamboozled why you wish to turn off ALL the custom searches.. why search custom in the first place?

The quick keys (0 to 9) allow you to enable/disable each of the 10 custom searches during custom searching... you must have one enabled, it defeats the purpose of searching! The scanner would be sat doing nothing otherwise... bad software design... so it must search atleast 1.

The Lock Out's of each of the custom searches tell the scanner NOT to search through during scanning.

By default, all 10 custom searches are L/O'd. If you for example unlocked 1 of them.. it'd be searched through after a scan of your systems/groups is complete... it'd repeat this cycle until you locked the search out again. If you dont wish any custom searches to be done during scanning, lock them all out again.

PeterW

Sorry Peter,
I thought that as with the scanning of Systems you could lock out
all the searches and the scanner would display "Nothing to Search"
similar to the "Nothng to Scan" when all the Systems are locked out.
I thought there was something wrong with my scanner.
I could not see in the instructions anything saying you had to have
one Custom Search enabled atleast. Just me reading things wrong I
guess :-))
Thanks for explaining things Peter, appreciated.

Tom.

326. Scanning vs searching

Yahoo group: UBC3500XLT
Date: 2008-01-08 09:33:07 UTC
From: topfuelbob
Topic: 326 Message: 326

The difference between "scanning" and "searching" was something that caught me out when I first bought this scanner, but once the penny dropped it all made sense.

So in case it helps any other new owners, this is how I understand it, please feel free to correct, amend or discuss:
"Scanning" steps through channels you have already stored in the systems.
"Searching" steps through all channels between two points whether or not you have ever stored them.

The scanner can be in one of two modes, either "Scanning" or "Searching", i.e. stepping through channels you already know about and have stored, or looking for activity in places of interest based on a portion of the airwaves that you choose.
"Scanning" is started by the "Scan" button.
"Searching" is started by the "Func + Scan" button.

But, those nice people at Uniden have given us the option to sneak in a quick custom "Search" or more, at the end of each "Scan" cycle. To do this you just unlock each custom search you want to use, under the "Search with Scan" option.

Obviously I've simplified this to keep it short.
For example, "Scanning" takes into account systems and groups being locked out etc.
Channels "Searched" will depend on step size, frequency lockouts etc
There is also the option to stop a "scan" and then "Quick Search" from there, which I believe will continue searching all bands.

So, lets have a few more simple and short "layman's guides", each in a new thread to aid searching maybe? You can never have too many hints and tips.

Thanks for the explanations and help,
This 3500XLT takes a bit of getting used to when you've been used to the older style scanners such as my AOR2002 and Realistic PRO-2042 all of which are getting on a bit now. I have the bcTool software which is a help though that too can be a bit confusing when you are not used to controlling a scanner via the pc.
And although there is the easy read manual for the 3500XLT which I have looked at and is good help, it still could do with some simple to follow examples for us "slow learners" a real break down of what is what and how.

Tom.

328. FAQ: Switching between Alpha Tag & Frequency while Scanning

Yahoo group: UBC3500XLT
Date: 2008-01-08 12:39:10 UTC
From: Aubs
Topic: 328 Message: 328

When you are scanning pre-programmed systems/groups/freqs and the radio stops on a transmission, normally, only the alpha tag is displayed.

To switch between the alpha tag and the frequency (and vice verca):

Press the 'Hold' button (I can't remember if this step is required. Try it without and then with!)
Press and hold the 'Function' (on the side) button
Press button '5'
Let go of the 'Function' button.

Repeat as necessary to switch between alpha and freq.

330. CTCSS & DCS

Yahoo group: UBC3500XLT
Date: 2008-01-09 21:25:41 UTC
From: scan2rx
Topic: 330 Message: 330

How does the scanner deal with a frequency that has several users but each user has a different CTCSS/DCS tone?
If you are doing a Search and Store between limits will it show/log a duplicate frequency but with different tones. I am using the scanner with the bcTool software as well a just the keypad on the set.

I know of several users on a UHF frequency, each user uses a different CTCSS or DCS tone. How will the scanner deal with them, will it save the same frequency several times but with the different tones.

Thanks,

Tom.

331. Re: [UBC3500XLT] CTCSS & DCS

Topic: 330 Message: 331

Hi Tom,

Give it a try and see, especially if you know what frequency they are using.

bcTool should correctly identify and log in it's logging the different
tones.

see www.bcTool.org for more info (if you're not already on it)

If you program the frequency with tone into the scanner, you will only hear
that particular user.
If you program the frequency with tone set to "search", you will hear every
user and their tone will be displayed.

Topic: 330 Message: 332

Basically each individual 'user' will need to be saved with its individual 'tone' on that frequency. You can then alphatag each user with its name and the scanner will only stop on the channel with the correct tone then. It will scan the freq then the tone to determine which channel or user to stop on.
If that makes sense!

EG:

CH61 453.675 Tone 71.9 "Rubbish collectors."
CH62 453.675 Tone 88.5 "Parks and gardens."
CH63 453.675 Tone 107.2 "Traffic wardens."

I guess thats how dynamic memory units work, ie rather than save all the data each time, just the freq then (as above) a seperate channel allocation with the differance, in this case the tone.

Hi,

You may find the 'Easier to read' manual for the 3500XLT useful.

http://myweb.cableone.net/marksscanners/3500/3500.html

and as you have a programming cable, www.bcTool.org will come in useful.

For standard UK frequencies, and ones for certain areas, take a look at this
group:
http://groups.yahoo.com/group/3500ukmemfiles/
...compatible with bcTool too!

Hope this helps.

338. Close Call at airshows

Yahoo group: UBC3500XLT
Date: 2008-01-13 14:54:16 UTC
From: richard8469
Topic: 338 Message: 338

OK I'm nearly there. I've used bcTool to create my Systems and groups
and loaded them into the radio which was fun. But I'm still not sure
why we have quick keys and the ability to lock systems and groups out
when a quick key will only work when its system or group is unlocked,
but never mind I can live with it. My main question is this:
I intend to use the scanner at airshows in order to find out what
freq's the aircraft and marshallers are using. My plan is to SCAN the
freq's that I know are in use and do a close call SEARCH in the
background to find the rest. My problem is I don't know what range
the marshallers will be using or where these hits will be stored. I
understand I can tell it where I want them stored and the easy read
manual mentions a group named 'Found Channels' in a (created) system
called 'Close Call' □ presumably I must create this, There is
the `Qck Save Cnv Sys' and Qck Save Gp' so are the freq.'s
automaticaly stored in this.

I'm sure that there must be other group members who will be planning
to do much the same thing so perhaps they can post their set ups and
suggestions.

Thanks
Richard

It's a bit difficult to say. The obstructive bastards won't let you download the instruction manual or drivers without a log on so it's impossible to say what chipset these things use. I get good results with my FTDI based device. Others swear by Prolific derived devices. Mileage may vary with lesser chipsets.

348. Problems uploading freqs to 3500, memory full !?

Yahoo group: UBC3500XLT
Date: 2008-01-19 10:31:40 UTC
From: vlieghe2000
Topic: 348 Message: 348

Hello all !

I made some upload of new mem files to my 3500 and got a problem.
I cannot go further 71% of the memory (settings/scanner info), 1500
freqs when uploading ended with a problem ...
I tried to erase systems and retry upload, also clear memory with
"2", "9", "Hold" when turning on the scanner and upload again ... i
still have the same limit/error.
I tried with BCTool, and Butel ...
Also, manually adding a freq gives a message about "out of memory" ...
Does anybody have the same problem ?

I wondeded if the "Systen" info written in the scanner memory can be
large (larger than storing a freq for instance) ... Maybe same for
"Group" storing info !? This can explain the theorically remaining
memory for freqs is filled with system/groups infos !?
I have about 22 systems stored, each containing 4-5 Groups ...

Any clues very welcomed,

L@urent

Yes, that is the way of it monsieur,
a certain amount of memory seems to be kept in reserve for other
functions. In other words, not all of the100% of memory available is
used for stored systems.

Thanks to bcTool, all I use mine manually now is close-call storing
and scanning/searching channels programmed by said program.
There is a release now available on the group or the website,
totally free of course!
Neil.

Neil's right,
There are few scanners which are easy to use straight away, first off, you need to know where to look for active channels. Then you need to know about modes, although that's easy really, narrow FM for most things, and AM for airband plus most fire services.

There are many reasons why the UBC3500XLT is the ultimate scanner in the UK marketplace, and yes it is actually not that easy to approach from the keyboard but, bcTool allows you to program and control just about any Uniden dynamic memory scanner from your computer.
The software is free, a lead might cost you ten pounds. Jeff will testify, it puts the whole thing in perspective.

You'll regret getting rid of it. If you throw the baby out with the bathwater, you will lose
Close Call
2500 memory channels
Near instant CTCSS / DCS decode
Dynamic memory allocation
It's really cheap
And above all, bcTool, he best scanner application ever conceived, bar none.

The choice is yours, but I hope you make the choice that is right for you. Have you tried the simplified manual btw?

Hi Jeff, something to bear in mind:
You might have to remove one connector to bring the cable into the house.
Also make sure there are no tight kinks which might put a strain the centre
conductor. Oh, and wait till the wind drops before climbing up the ladder! Good
luck.

From: druitt25
Topic: 363 Message: 363

I am a new 3500 userstill trying to understand the interaction between closecall and what is stored in the radio already.
If a freq is already programmed into a memory location will that freq not come up as a close call freq?

Is there anyway that can be programmed to allow any freq to show up in close call?

Am I correct in thinking that the Broadcast bands are used to set bands that the radio will ignore in close call such as Band 2 broadcast and local pager transmissions?

Is there an easy way of changing mode from AM to FM when listening to a freq?

Thanks in advance for your help.
Steve

Hi Steve,
Firstly, make sure the radio is set to Band 3.If you have a freq in the memory and close-call gets a hit on it,it will show up.Why do you want to change between AM and FM?

Brian.

Close call is independent of any stored frequencies. It will lock on to any
signal within Close Call search band so long as it's strong enough.

Broadcast screens prevent close call hitting on user -selected ranges as you
say FM broadcast or pagers.

No way of switching directly from AM to FM unfortunately.

Regards
Richard

366. Scanning Systems

Yahoo group: UBC3500XLT
Date: 2008-02-08 21:05:40 UTC
From: alt57m
Topic: 366 Message: 366

Hi
Ok this is newby question but I am having trouble scanning a system.
I have saved emegency services on a system with fire, ambulance,
coastguard on groups.
Now the question is how am I able to only scan these channels?
At the momment I can only scan for 255 seconds untill it jumps back to
general scanning.

thanks
Steve (Norfolk)

Hi Steve

More easily read manual here:

http://myweb.cableone.net/marksscanners/3500/3500.html
(http://myweb.cableone.net/marksscanners/3500/3500.html)

Menu > Search for ... > Edit Custom > (Select custom) > Search with Scan >
Set Lockout

do this for each Search Range and when you press Scan it will just scan the
groups within your system(s).

Hope this helps
Regards
Richard

Thanks for the replies, I stopped near a local airfield and wasn't getting a close call hit, thought it might be becuase the freq was already stored.

I neede to change mode when I was serching around 400Mhz, radio stopped in WFM mode, wanted to change to NFM. Have now got bctool and changed the mode from automatic to NFM for that search band.
Thanks,
Stephen

370. Close Call Feature

Yahoo group: UBC3500XLT
Date: 2008-02-10 14:45:13 UTC
From: nsmyth30
Topic: 370 Message: 370

Hi All

I started scanning many years ago with a Bearcat UBC3000XLT which I thought was a great unit. I then changed to an Alinco 2000 - mainly as I was interested in their equivilent to the close call feature. I haven't been impressed with this unit - especially their version of the close call feature which is incredibly poor and so have decided to come back to Bearcat.

I have been looking at 2 models and was hoping to get some advice from the group. Again, my main interest is the close call feature so I have been looking at the UBC72 model and the UBC3500 model. I like the extra features on the UBC3500 model but I have heard that the UBC72 model is best when it comes to the close call feature. I'm curious if anyone has had experience of these 2 units and what your thoughts are.

Many Thanks

Neil

Hi Paul,
As a starting point, Nevada do the programming lead for GBP25
<http://www.nevadaradio.co.uk/acatalog/uniden-accessories.html>
which is a bit pricey. You can save yourself a tenner by buying one
through eBay
<http://cgi.ebay.co.uk/Uniden-Bearcat-UBC3500XLT-USC230-PC-Cable_W0QQitemZ110168501865QQih
Z001QQcategoryZ40979QQrdZ1QQssPageNameZWD1VQQ_trksidZp1638.m118.l1247QQcmdZViewItem>

USB to RS232 adaptors are a mixed bunch. Essentially, not all are fully
USB compliant and/or fully RS232 compliant. On top of that, some drivers
are better than others. bcTool has been developed with, and widely
tested on adaptors with a Prolific chipset with good results. I
personally use an FTDI based device which never gives any problems.
Unfortunately, sellers have all the blurb, but usually miss out vital
details such as what chip it is built around. I could not find one UK
seller on eBay who stated that their adaptor was based on a Prolific
chipset.
Another factor to consider is EMC. Some users have experienced issues
from interference being radiated from USB leads and adaptors. You'd be
advised to avoid any products which don't feature a ferrite bead on the
lead. This appears as a bulge attached around the cable. A CE approval
is also a good sign.
The eBay catagory for these devices is Computing> Cables/Connectors> USB
Cables

HTH

To activate/de-activate groups, whilst the system is currently scanning,
hold down the function key. Then enter the number of the group in
question. You'll see it on the bottom row. An asterisk means it's disabled.

Hi maybe you guys can help me im wondering if the scanner side connection where you plug the data cable into the scanner are the same on these models br330t-ubc3500xlt i need the pcb mounted mini usb socket if that is what you call it i have looked everywhere an i cannot locate this i see some have made there own data cables and used the ends from fm transmitter cables i could unsoulder the socket from one of these but cannot find them any help on where to find the socket or a device i can take it out of would be of great help thank you

386. Advice on ease of use with 3500xlt for new user

Yahoo group: UBC3500XLT
Date: 2008-02-28 10:30:32 UTC
From: trailite
Topic: 386 Message: 386

Hi all
I am new to scanning and have not yet purchased my scanner.
As far as I can tell from reading reviews etc for this model, this is a fantastic piece of equipment for the price.
My question is this...as a novice is this scanner fairly easy to get the hang of, given some time and effort, or is it likely to make me wish that I had bought something really basic to start with. I have downloaded `bctool` as apparently this can help but I am not even quite sure exactly what this will do for me.
I would be pleased to hear thaughts from anyone who has mastered this scanner as a `first scanner`.
Any advice would be very much appreciated.
Thanks in anticipation

Hi,

I had a scanner about 12 years ago so knew (or I thought!!) what to expect when I bought my 3500. The basis is there, but the way it works is completely different. Far better in fact!

It is not a hugely difficult radio to pick up, but if you've not had any scanning background you may find it trying at times. Certainly with a bit of perseverance and using bcTool you will pick it up and be glad you bought it!

Basically, bcTool simplifies programming frequencies to the radio. But, it also allows logging (lists what frequencies the scanner has stopped on) and also records what has been heard, amongst other things. You will need a cable to connect your PC to radio though.

It is a cracking radio and the software is equally as great.

If you look in the links section of this group (http://groups.yahoo.com/group/UBC3500XLT/links), you will see a link to an 'Easier to Read UBC3500XLT Manual' which is very very useful.

Good luck!

Aubs

388. Computer lead for bcTool

Yahoo group: UBC3500XLT
Date: 2008-03-02 15:57:32 UTC
From: Roger
Topic: 388 Message: 388

Hello all,
Which lead from 3500 to computer using bctool should I use. There seems to be two leads available, one 3500 to USB with what appears to be some electronic lumps in the lead and one other from 3500 to a port of some description.
Help would be most welcome.

Roger

389. Uniden 785 FS

Yahoo group: UBC3500XLT
Date: 2008-03-03 10:15:02 UTC
From: Scott
Topic: 389 Message: 389

Uniden UBC785XLT, boxed as new. Light use as I prefer handheld scanners. No scratches, dings or marks. Everything is there from when it was bought and nothing missing. It's virtually brand new. I'm not a smoker so it's not stinking of fag reek!

Reason for sale - buying an Icom R20.

Anyone wanting to buy it send a message directly to my email address before it goes up for sale on ebay?

going on EBAY for £120 plus postage of £8.

I accept paypal

regards Scott

Hi Roger,
I got a serial lead from here (a little cheaper off ebay
maybe):
http://www.wsplc.com/acatalog/Uniden_Accessories.html

I just plugged it in and fired bctool up.
So, so, easy with bctool - you won't look back.

John.

Hi Roger,

My UBC3500XLT arrives shortly but I do not have a com port on my PC
so will have to get the USB type cable, can you let me have a link
where you saw one as I cant find it.

Does anyone know if the USB cable is ok for use with BCtool?

Many thanks

Matt.

From: Aubs
Topic: 388 Message: 395

Hi Roger/all,

There are two types of cable and three options of connecting a 3500XLT to a PC.

Serial Cable
~~~~~~~~~
If your computer has a serial port, you can connect the serial cable
directly to the computer without the need for any additional drivers
or setup.

example: http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=110168501865

USB Cable
~~~~~~~~
Most comptuers have USB slots. plug the cable from radio to PC via a
USB port. I bought mine from the US because they weren't available in
the UK and I got it for less than the developers of ARC software were
selling it for! They do come on ebay now and again, can't find one
right now, so here's the one I bought:
example: http://www.scannermaster.com/USB_Cable_p/01-551038.htm

Serial Cable with USB Adaptor
~~~~~~~~~~~~~~~~~~~~~
Serial cables are the cheapest option, USB are the most useful if i)
you do not have a serial port or ii) you intend moving the radio
between computers frequently or iii) you use a laptop and don't want
to unscrew the thread screws each time you want to disconnect.
Using a USB adaptor/converter is possibly the most resourceful way
because you can use the adaptor for other applications (if you got
another Uniden radio, or to update your FreeView box as examples). Rob
(the developer of bcTool) has said in the past that you should make
sure the adaptor has a chipset called 'prolific' (or something like
that!) to make sure it is definitely compatible with bcTool

example:
http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=110168501865
with probably any of these:
http://search-desc.ebay.co.uk/search/search.dll?satitle=USB+serial+prolific&fts=2

I bought the USB version for simplicity, but in hindsight, I may have
been better with the adaptor as I want to use something else too.
Never mind!

Anyway, hope the above helps someone/anyone!

Aubs

Press hold, then enter the frequency then yes then yes again, then repeat
the process for all frequencies. These will then store into the Quick Frequency
Group.

Have you tried the free BCTool program for this scanner, it makes life a lot
easier.

Rob

398. Turning Groups on/Off within a System

Yahoo group: UBC3500XLT
Date: 2008-03-12 16:56:39 UTC
From: scan2rx
Topic: 398 Message: 398

When using the UBC3500XLT and the bcTool software, if you are scanning just one System, which is allocated Quick Key 11, and within this System there is one Group which has the Quick Key 1 allocated to it.
If you then press FunH button and turn of the Group Quick Key 1, so there are no Groups to scan within the System.
The scanner displays 'Nothing to Scan'.

How do you get back into/access the System (Allocated to Quick Key 11) to turn the Group Quick Key (Allocated to Quick Key 1) back on again.

If I press 1, I get System Quick Key 1 which starts scanning all its Groups, whereas what I am after is getting back into System Quick Key 11 to turn on its Group Key 1.

I don't want it to start scanning another Systems Groups, only the original one Group under System Key 11, where there is a single Group allocated to the number 1 Quick Key.

I haven't locked out any Systems/Groups only turned off the Keys.

Thanks,

Tom.

Hi Rob,
I tried that but no luck, I did wonder how you would get back into a double digit System to turn its Group key/keys back on.

It is ok if you just press a Single digit key for a System, say 1 2 or 3, then it goes off scanning thoughs Systems. But if you have all the single digit Quick Key Systems all turned off, and are only using double digit System keys it won't allow you to select 11 or 12 or 13 etc..
It shows this in the display S0:***4
GRP 123

For A single digit System, say 4 it shows the above and its Groups.

What I wanted was S1:1
GRP 1
For System Key 11 which has a single active Group in it alocated to Quick Key 1

But a cannot seem to get back inot System 11 to tuen on the Group Key 1.

Topic: 402 Message: 402

Hi all.
Just bought a 3500 today. Thought I was going to really like this scanner, but I'm almost ready to stamp on it :(

Just how difficult can a scanner be to use??
I've own pretty much every scanner on the market over the years, but this one is CRAZY!!

So if anyone could possibly help. Oh and I've tried to read the manual. That might as well be written in invisible ink.....
Why can't I just enter a frequency, and search from that freq?
Why can't I change the mode, and step size etc?

I WILL try the manual once more, but I don't think it'll help.

Basically, I'd like to be able to input 451.000 (for example) into it, change the step size and mode, and search from there.

Can this be done?
Am I just getting old??!!

Thanks in advance, Andy

Subject: [UBC3500XLT] New member, might not be here for long!

Hi all.
Just bought a 3500 today. Thought I was going to really like this scanner, but I'm almost ready to stamp on it :(

Just how difficult can a scanner be to use??
I've own pretty much every scanner on the market over the years, but this one is CRAZY!!

So if anyone could possibly help. Oh and I've tried to read the manual. That might as well be written in invisible ink.....
Why can't I just enter a frequency, and search from that freq?
Why can't I change the mode, and step size etc?

I WILL try the manual once more, but I don't think it'll help.

Basically, I'd like to be able to input 451.000 (for example) into it, change the step size and mode, and search from there.

Can this be done?
Am I just getting old??!!

Thanks in advance, Andy

Hi

Next Question. Press menu button and rotate control to Srch/CloCall Opt. Press Y. Rotate to set Modulation. Press Y. Rotate as required press Y. Press scan.

Step size is similar.

Recommend Modulation set to Auto and Step size to 6.25.

Regards

Dudley Baker

Why can't I change the mode, and step size etc?

You my friend are a STAR!!!

Thankyou very much indeed :)

NOW I'm starting to like this scanner lol!!

Andy, I am not very good with this scanner but I mostly lurk on here and I have picked up a great deal of info' about this scanner. It can be infuriating to begin with because it is so different, but when you understand the method it saves a lot of wasted space compared to the old bank system. There is also a website with a greatly simpified manual @ http://myweb.cableone.net/marksscanners/3500/3500.html
Hope this helps.

Jim.

Hi Ricky

Some radio transceivers use tone squelch. This means that the squelch doesn't open until it receives a certain sub audible tone. Anyone transmitting on the same frequency without that tone or with a different tone will not be heard.

The scanner will search for any tones transmitted and display them on the screen so it helps to identify the user.

Hope this helps
Regards
Richard

Hiya Jim.
You are quite right mate.
Now I can do what I wanted to do I'm starting to like the baby allot.
Hopefully should have the PC lead today, so that will help program her.

Thanks for the link - looks GREAT!

Andy

If you're looking for cracking software to use to program the radio,
take a look at http://www.bcTool.org

413. Monitoring Monthly Offer - 3500 - 'Discontinued Product'??

Yahoo group: UBC3500XLT
Date: 2008-03-13 09:03:26 UTC
From: Aubs
Topic: 413 Message: 413

On the MM page where they are selling the 3500
(http://www.monitoringmonthly.co.uk/article/specialoffer)

...why do they say:

"Don't miss this exceptional deal and order now to avoid
disappointment! Please note that as this is a discounted product and
so no additional subscriber reduction applies."

Specifically the "... this is a discontinued product..."

Is there a newer UK handheld out there or coming soon? or is it just
they are not selling it onces stocks are depleted?

If I'm not mistaken (and from memory), if you are scanning one system
and have only one group in the system and you turn that group off, you
are indeed taken to "nothing to scan".

Try:
Hold
Fn+7
Scroll to the system
Enter
Scroll to the group
Enter

Something like that should do it right, I think... hmmm maybe not! lol

Will have a quick search and get back to you if I find the answer.

Thanks for all your help chaps so far!

Still a bit confused by the memory system on the scanner, but what I've done so far, for example, is create 3 systems. [1] Airband [2] Marine and [3] UHF. (If this is right there'll be more!!)

Within the systems I have [1] Airports and [2] Airband General.
Withing Marine I have [3] General Marine and UHF I have [4] Security.

Is this the correct way of using the memories?

Sorry to sound like a complete thicko!!!!!

Andy

Sounds good to me, but you dont have to do consecutive numbers on the
systems within the groups. IE you have within the Marine 3 and and UHF 4, you can
renumber them both to one. I hope this explains it okay for you.

Cheers Rob :)
But to program how you suggested, but there's another problem :(

The scanner said nothing to scan, and my groups disappeared, and the
systems were still there, but empty........

OK thanks Rob and Aubs,

I think I am getting there, slowly, this scanner can be bit complicated, though the bcTool which is a great help does make it a easier, but I think I can see how to do it.

Tom. :-)

423. EXT SPEAKERS

Yahoo group: UBC3500XLT
Date: 2008-03-14 14:02:58 UTC
From: btjdennis
Topic: 423 Message: 423

Hi
Is it ok to connect a spare pair of pc speakers to my scanner they
are pluged in to the mains

thanks

Brian

Hi Brian,

Yes, will be fine.

A previous discussion (subject "Deal of the moment!") on this group (and Proma) spoke about headphones of different impedance, but same should apply to speakers. Consider connecting your radio to your line-in on a setero or computer - same basis of a powered system.

General consensus from the previous discussion was (as best explained by mike-g7bnf):
~~~~~~~~~~
You will not damage anything!

The diff in impendence [ohms]just simply means they will be louder or quieter than other.

Higher the ohms the quieter lower the ohms the louder.

Mike
~~~~~~~~~~

425. Re: Turning Groups on/Off within a System

Yahoo group: UBC3500XLT
Date: 2008-03-14 20:30:19 UTC
From: zacklaws84
Topic: 398 Message: 425

Hi

I queried this problem a while back in this forum and the solution is:-

1. Press down the function button on the side to get the scanner to hold

2. Whilst holding the function button, use the scroll knob to scroll to the system you want.

3. You will see the asterix's have reappeared again in the system, and whilst still holding the function button in just press the numerical buttons on the keyboard to open the groups up again.

In reality when you do this, what appears to happen is everything that is open appears blank and everything you closed down suddenly appears with asterix's so just fill in the asterix's to restore everything but you only have to do one group and then all the asterix's will apear as normal after you let go of the function button

Hope this helps

Agreed,
Powered speakers should be of a relatively high impedance (circa 15K Ohms) so no risk of damaging anything here. You even get audio in both channels on the 3500 whereas a lot of other scanners will only give out audio in one channel.
Tone.

Ok Thanks for that,
Have noted it down. I suppse once you get used to operating the
scanner it all become clearer.
Tom.

Andy,

The belt clip (metal bit sticking out of the back of the radio) is the same as a CB microphone holder, so if you find something suitable to hold a CB microphone, it should work for the 3500!

430. Frequency Display

Yahoo group: UBC3500XLT
Date: 2008-03-17 17:09:53 UTC
From: Jim Collins
Topic: 430 Message: 430

Please can you help. I am trying to copy and paste frequencies using Butel Software. The problem I have is, when the information is installed in the scanner it does not display the frequencies. It just keeps scanning until Hold is pressed, then, displays the name of the airbase, but not what frequencey, i.e approach, radar. tower etc; it's locked onto, so I have no idea what I'm listening to. Please would somone tell me should the frequencey be displayed on the screen (which I feel sure it should) and if so, where am I going wrong?
Many thank's...Kindest..Jim...

I am afraid that it is a lacking feature in the UBC3500.

The mobile BCT15 can be configured to display the frequency where the mode text (FM NFM..) are normally seen on the display, but for some reason there is no such function in the UBC3500.

Ubbe.

Jim, Can I suggest you take a look at www.bcTool.org - it's free and a
lot of people are raving about it :)

Ubbe, What Robin Milner said is true. with the 3500, you can either
have Alpha Text OR frequency, but as you rightly said, there's no way
of having both on at the same time.

From: AWOL
Topic: 430 Message: 435

You can try and get around this by including the frequency in the title on the display. I live in Ireland so I have Irish, UK and French (just Brest) aeronautical frequencies entered in my 3500. I have the airband frequencies all on system 1 but I would have the UK "high" frequencies in different groups but with the same quick-key. This means that the control centre appears in the top line, i.e. London, Manchester or Scottish. I then build the frequency into the description, e.g. 132.95 Lands End, 125.95 North Upp, 124.825 Galloway etc. It's crude but it works for me

Hi Jeff.
I've used a discone on the side of my house for some 4 or 5 years now,
and it's never had a problem with wind (LOL)
Just lately, as I'm sure you're aware, we've had some very high winds.
And she's still there, receiving away!!

I'm sure that as long as it's mounted properly, there shouldn't be a
problem.

Andy

Don't forget... There's no need to write the name of the airport out
in full, you could abbreviate with their codes...

MAN = Manchester
EMA = East Mids Airport
BHX = Birmingham
etc

I would assume most airports have these abbreviations but not certain
for military etc.

457. MM deal still on?

Yahoo group: UBC3500XLT
Date: 2008-03-23 15:15:32 UTC
From: John
Topic: 457 Message: 457

Hi,
I could do with another 3500 as mine is tied up on my desk most of
the time running through bctool.
Is the MM deal still on as i might order one (cracking deal btw) - i
like to take the radio out and about ie: MAN airport mainly.

http://www.monitoringmonthly.co.uk/article/specialoffer

John.

hi john. i too have a 3500 and want to ask if as i live in rhyl do you
think i would be able to get traffic control at man airport with a
discone about 15' from the guttering on my house i get them on the
approach from the aircraft only
thanks jeff. ps you can tell i am new to scanning

Hi Jeff,
I think you are getting as good as you can get and pretty much
what i get.
The 3500 is as good on sensitivity as any other i've had but all boils
down to your position.
I'm about 40 miles away (N derbyshire) and get approach and radar
(Airband outside aerial too).
On another note too why not log some of the overflights on to your
scanner - plenty of action and interesting too with the heavies etc,
should be perfect for your location.
John.

hi all i,m new to the 3500 but not to scanning i live in the hills
above wrexham but not high enough to get manchester ground or
liverpool tower reguarly i lived in rhyl for two years and i had a
icom r2 the best i had with a indoor home brew antenna was caernarfon
tower with snowdon in the way i couldn't get manchester ground or
liverpool tower because the high ground of the wirral was in the
way,i wish i was still there now i have a pc and access to

Hello to everyone I am new here.
I've had my 3500XLT for 2 days, I have had some fun with it so far
however I have come across a problem, I hope somebody can help me?
First off, my close call feature doesn't seem to be working correctly.
I have gone over the manual and looked on the web for solutions to
this but have not had any luck. I live right under a major flight path
but close call won't pick up any transmissions, it shows that it is
scanning
but it doesn't alert. I have set it up to light-beep. I took a walk
tonight straight past 4 fire engines that were out on an emergency
call out and close call had nothing to say?
My 3500 is brand new straight out the box.

Also can anyone tell me how to reset my 3500, I read somewhere that
you have to press 2 & 9 on the numeric pad whilst turning the unit on,
I have tried this but nothing happens...
And I can not find anything in the manual or on the web to help me
achieve a factory reset....please help before I go completely mad.

many thanks

Hi I can't help with your close call probs; but initializing the
memory is on page 40 of the manual. With scanner off, press 2,9 and
hold buttons and then turn the scanner on while keeping buttons
depressed..Wait until all memory clear message is
displayed..Kindest..Jim..

471. Ariels

Yahoo group: UBC3500XLT
Date: 2008-03-30 15:38:06 UTC
From: Jim Collins
Topic: 471 Message: 471

Hi All, Seeking advice on what would be the best ariel to buy for my 3500. Unfortunately I'm fairly low down in the Severn valley (About 300ft). With a 20" ariel I pick up London control quite clear on 130.6ooo + Swannick S.W, but most military bands are a struggle, unless I travel to Clee Hill or some other very high ground. I'm only interested in Air band and Military ranges. I've been looking at the Discone and wondered if this would improve things, or is there somthing that would be better? My knowledge of radio is poor, so I really don't know what I'm looking for, so any advise will be most greatfully recieved..Many thank's..Kindest..Jim..

472. Useful link to anyone interested in Marine/Coastal listening

Yahoo group: UBC3500XLT

.

Here´s a website with instructions on how to
make a discriminator-tap on your scanner
most scanners are listed:

http://www.discriminator.nl/index-en.html

Here´s the specific page for the 3500xlt:

http://www.discriminator.nl/ubc3500xlt/index-en.html

My advice...dont use this scanner for that purpose since:

1) You may easely damage it..unless you are highly experienced.
2) Serious pager use will block it to use for other things.

Unless you have a special reason i would get myself a lowcost/used
scanner...the only special reason i could think of is that the 3500xlt
can do something otheres can´t (related to pager-reception)

From: camel_face69
Topic: 479 Message: 479

I'm fairly new to all this scanning malarkey but am really enjoying it and really appreciate all the help from people in the group.

I am looking to upgrade the antenna supplied with the 3500 to either a Watson 881 or 889, which I understand are highly rated. Does anyone know if these would improve upon the standard 3500 antenna and which would be better the 881 or 889? I tend to listen across most frequency ranges so wouldnt be looking at any one particular band.

Thanks

hi . i am also fairly new to this and having had a mrw100 antenna
which is high gain i saw a bit of improvement, so i brought a
scanmaster d1300 and put it in the garden on 2 steel poles at a
height (just for now)at about 13' before i pay someone to put it on
the roof and what a differece it makes,i now get lots more aircraft
and a.t.c.and i live 50 miles from man airport i get lots of
different frequencies now so give a discone a try i am going to get
mine put on the roof now . so let me know how you get on
all the best jeff

481. RE: [UBC3500XLT] Re: Antenna

From: AWOL
Topic: 479 Message: 481

I recommend that you buy both a Watson antenna and a discone!! As you are new, the easiest route for improvement is to buy a replacement for the rubber-duck antenna and I have both the W881 and W889. In fact I have gathered about six or seven replacements for rubber duck antennae over the years but I almost exclusively use the W889 when on the move. There are two reasons for this. Firstly it is telescopic so I can adjust the length to optimize the incoming signal if necessary and, secondly, it is on a knuckle joint so if I am wearing it inside a coat on my belt it will bend with my movements. The only downside that I see is that the screw on the knuckle joint sometimes comes loose so I may have to re-tighten this occasionally (perhaps once or twice a year only).

This will bring you a big improvement over the antenna that came with the 3500XLT. After that you should look at mounting a discone or similar antenna at home. Get this as high as possible and use a good quality cable to come down to your set and you will see a further large improvement. You should be aware that you might see an overload on some strong signals but will be able to attenuate these

I hope this helps

Regards

Adrian

hi . i am also fairly new to this and having had a mrw100 antenna
which is high gain i saw a bit of improvement, so i brought a
scanmaster d1300 and put it in the garden on 2 steel poles at a
height (just for now)at about 13' before i pay someone to put it on
the roof and what a differece it makes,i now get lots more aircraft
and a.t.c.and i live 50 miles from man airport i get lots of
different frequencies now so give a discone a try i am going to get
mine put on the roof now . so let me know how you get on
all the best jeff

No problem at all. You have taken a good first step and I don't think that you will regret it. Don't forget stage two where you start to think about how you mount a discone on your roof and how you get the cable from there to your indoor radio. Nice plan for the summer..

From: jeffw1950
Topic: 484 Message: 484

hi. i would like a bit of advice about putting up a discone at the moment i have tried clamping it to 2 steel line posts in my back garden at a approx height of 16' and the reception isnt too bad, i get more than i did with the rubber duck. i am about 50miles from man airport and getting reception but qiute a bit of interference so i would like to know if putting it on a 10' pole under the guttering or would it be better at the gable end on a short pole of say 3' which would put it about level with the chimney and i dont want to spend £70 or more for nothing so please someone give me some advice
thanks jeff

Topic: 484 Message: 485

On the topic of interference you could enhance your airband signals by inserting an airband filter inline with your coax that would almost block out the signals either side of 108 and 136Mhz. I think AOR still do an airband filter. As I was searching for the airband filter I had in mind there is actually one up for auction right now on EBAY >>

http://cgi.ebay.co.uk/AOR-Airband-Filter_W0QQitemZ330226734386QQihZ014QQcategoryZ40979QQssPageNameZWDVWQQrdZ1QQcmdZViewItem

item Number 330226734386

If you can get your discone clear of any obstructions that is about as best as you can hope for. I'd do the Cable end pole if it were me.

regards Scott

Sounds like a plan, I'll not tell the missus about the discone just yet tho!!

Have received the W889 today and it has made more difference than i could have imagined!! Picking up much much more now and a lot clearer aswell.

Got the antenna from Waters & Stanton online and they gave a great service. Just need to get everything logged now and post it on Proma.

Once again, many thanks!!

Regards,

Matt.

490. Selling my 3500 due to lack of use.....

Yahoo group: UBC3500XLT
Date: 2008-04-21 15:33:03 UTC
From: Andy
Topic: 490 Message: 490

Sadly, I need the money for other things.
But really haven't used it much at all since I got it, so it's MINT condition, with all usual accessories, and the PC programming lead.
Bought new from Nevada in March.

For more info, please e-mail me direct at

a.foster69[AT]ntlworld.com

Looking for £130 + postage.

Thanks for looking, Andy

491. [UBC3500XLT] Copy & Paste

Yahoo group: UBC3500XLT
Date: 2008-04-27 09:32:06 UTC
From: Michael Mannion
Topic: 491 Message: 491

Hi All,
Ive just collated some old frequencies in a Microsoft Works Spreadsheet. Having done this I tried copy and pasting this list into a new folder in the BCTOOL which copied over fine. When writing the list to the scanner all appears fine in the process but the list sent returned to its default 25.000 listing and my pasted contents were deleted.
(25mhz as upon opening a new folder and adding channels this is the default listing prior to pasting over)
Can any tell me why or guide me through what Im doing wrong.
Many thanks in advance
Mike

493. scanner help

Yahoo group: UBC3500XLT
Date: 2008-05-02 13:19:27 UTC
From: grayuknow
Topic: 493 Message: 493

Hi,
I wonder if anyone can help me. I have just bought this scanner a couple of days ago but I am struggling with the instructions. I have been scanning for a number of years and prior to this I had an Icom IC-R2, which is now poorly. I have always been used to channels and banks so my biggest problem I am having is programming this scanner. I dont know if I am doing this correctly but I found an example on the web about calling 'System 1' a name, so I called it 'Action' and gave it a fast key number 1. Then went to edit groups and I put 'Marine' in the title and it asked for a fast key number also..confusing! I inputed my marine frequencies in the group and off it went happily scanning. Anyway Later I went to our local garden centre (Yes exciting isn't it) and tried the 'Close call' and soon found the frequency that they are using so I was pleased with that feature and put that frequency in. Then later went to do an airband search but now I cant get it to scan. I have struggled with the instructions but cant seem to make the scanner stop searching through the airband and start to scan the original 'marine' frequencies that I put in the scanner. I wonder if anyone has any easy instructions to make the scanner just go. I can mess about with all the other fancy features on the scanner later. All I want to do is get it up and running first.
Thanks for any help on this
Best regards
Graham

Subject: [UBC3500XLT] scanner help

Hi,
I wonder if anyone can help me. I have just bought this scanner a couple of days ago but I am struggling with the instructions. I have been scanning for a number of years and prior to this I had an Icom IC-R2, which is now poorly. I have always been used to channels and banks so my biggest problem I am having is programming this scanner. I dont know if I am doing this correctly but I found an example on the web about calling 'System 1' a name, so I called it 'Action' and gave it a fast key number 1. Then went to edit groups and I put 'Marine' in the title and it asked for a fast key number also..confusing! I inputed my marine frequencies in the group and off it went happily scanning. Anyway Later I went to our local garden centre (Yes exciting isn't it) and tried the 'Close call' and soon found the frequency that they are using so I was pleased with that feature and put that frequency in. Then later went to do an airband search but now I cant get it to scan. Hi Graham,

Try reading the "Easier to Read UBC3500XLT Scanner Manual"

http://myweb.cableone.net/marksscanners/3500/3500.html

The bit that may be of interest is:

http://myweb.cableone.net/marksscanners/3500/3500.html#scanning

Also, I posted on another group a brief principle of setting up systems/groups. You may need to join the group first then come back and click this link:
http://groups.yahoo.com/group/Uniden-Close-Call-Euro/message/3393

From: peterparrot
Topic: 498 Message: 498

I have been using scanners for many years but programming the 3500 has had me scratching my head. I use my scanner for military aircraft only so almost everything is AM but sometimes ground units use FM in the 400 Mhz range and helicopters talk to the ships on the FM marine band etc. No problem until now but this scanner offers me FM NFM and AUTO. So what is the difference between FM and NFM and can I just use AUTO for everything anyway ?

499. Do these batteries ever charge ?

Hi Peter,
I have found this too. They took 26 hours last week for mine. If you look further to the posts made over the last few weeks you will see references to the batts in question and charging times which appears to be a problem.
Perhaps problem is incorrect, inconvienient would be more appropriate, nobody wants to wait this long for a re-charge.
One answer is fairly obvious which is to have a seperate charger on whilst using the others reducing downtime as well as a set of alkaline batts. Bear in mind that you will need a couple of sets, they chew alkaline batts up for fun. (dont forget to flick the switch over!).
regards
Mike

Well mine finally completed the charge but the 3500 is totally useless
as a battery charger!! And why three batteries ? What a pain to
recharge in sets of three - dont these designers have any experience
of using the kit they impose on us?

From posts on another group, it takes something like 6hrs to fully complete the charge.

What you should know though is that the the 3500 charges the batteries based on a timer, which is something like 14hrs. The batteries will be charged long before that, but the timer is, I guess, a safeguard that you don't over charge them!

Just buy a separate charger that allows you to charge 1-4 batteries at any one time. This way, you don't have to charge pairs at once and can do just 3 at a time.

Hi all.

Has anyone else noted that by using say 2500 NIMH instead of the 2300 that come with it, that they get a voltage error. It seems that for some reason if i use more than the 2300's it says voltage error. I also bought a car charger supposed to be for the 3500. It doesn't work. Same problem, Voltage error.

Cheers
Tony

I also bought a car charger/power adaptor lead for my 3500 and had the same error as you "voltage error" (it was putting out a fixed 9 volts instead of the 6 volts required) and I promptly sent it back to the place I bought it from and it was replaced with an identical one which did work. The place I bought it from had several returned to him with the same error and said it was a bad batch. I've now got a working one. I am pretty sure the company was xovereign electronics and they were very apologetic about the faulty lead

I see from their new advert that they don't include the 3500 in the listing for the lead now

http://cgi.ebay.co.uk/UNIDEN-CAR-CHARGER-FOR-UBC-72-92-69-2XLT-USC-230_W0QQitemZ120208939876QQihZ002QQcategoryZ40979QQrdZ1QQssPageNameZWD1VQQcmdZViewItemQQ_trksidZp1638Q2em118Q2el1247

I've stuck with the 2300 batteries and not changed so I can't comment on that side of things.

try sending your charger lead back for a replacement.

Hi Ian,

Have you tried the 'Easier to Read UBC3500XLT Manual' which can be
found in the group links section:

http://groups.yahoo.com/group/UBC3500XLT/links

Also in there is a link to the excellent bcTool which you may find
will ease you in to programming/setting up the radio as most functions
are accessible through it.

Thanks Aubs for that info. Yes I have the easier to read manual but would have preffered a one to one meet with some one who has this scanner as i think it is much easier to learn off some one rather than a manual. so if there is anyone out there who is in the york area up to say 40 miles who would be willing to help I would be grateful.

Thanks
Ian

517. "Rev" function??

Yahoo group: UBC3500XLT
Date: 2008-07-04 09:22:29 UTC
From: topfuelbob
Topic: 517 Message: 517

I know that Func+(.)no/rev monitors the currently-tuned frequency's reverse frequency but how does the scanner know what shifts are applicable? Is it in each Band Plan (1,2 or 3), and if so is it documented anywhere?

There's hardly a mention in the manual; is it user programmable? They went to a lot of trouble to print "Rev" on the case, so I'm hoping this can be used.

I know BCTool has it's splits.csv but that's not a lot of good when out and about.

518. RE: [UBC3500XLT] "Rev" function??

Hi

My understanding is that is set for the USA and not programmable.

Regards

Dudley Baker

Thanks Dudley, that's a shame but not unexpected ;-)
So for those special frequencies that I like to have a "listen on input" I am programming the adjacent channel with the input. Then when on hold, I can just click the knob up and down.

525. USC 230 Help

Yahoo group: UBC3500XLT
Date: 2008-07-15 08:25:21 UTC
From: Robin
Topic: 525 Message: 525

I have just bought a secondhand USC230 to compliment my UBC3500 and wondered if anyone on this group also owned one. I want to know if you can change the display from the alpatag to show the frequency. I have tried doing the hold function+five but this dont work on the USC230.

Is there also anyway of seeing the DCS/CTSS tone on the display when stopped on a frequency in scan mode rather in search mode.

Rob

526. band plan 3

Yahoo group: UBC3500XLT
Date: 2008-07-19 15:31:46 UTC
From: martin
Topic: 526 Message: 526

Is band plan 3 in in the UBC3500XLT to be used for searching, as their is no direct guidance for this, this could be an obviouse question so I aplogise in advance.

I'm not that technically knowledgeable but many on this and other groups say the radio should be set to band plan 3 for the UK. I believe this is the nearest band plan to that of the UK (all be it not exact if I understand what has been said previously).

Thanks for the reply Aubs....I hear what you say and to put my question another way.....if I do a search,say 135.0000 to 138.0000 would I put the freqs listed in band plan 3 together with the step size in custom 2 (for example) and search that area.

Cheers.

Hi All,

I have just ordered my 3500 and am looking forward to getting going. I am sure that I will learn a lot from this forum.
I do own another scanner, a Bearcat 100XL which I got going again a few days ago, probably good when it was new but seems so limited compared to the modern kit available. I never used it much outside of the aircraft band, I am hopeful the features of the 3500 will make the whole scanning experience a lot more rewarding.
Thank you all in advance for any assistance I receive from the forum.

Patrick.

Welcome.
Before you get totally confused and lost, grab yourself a copy of
bcTool (and a data lead if you don't have one) and make your
experiance a much more pleasureable one!
Its free and works well with good support.

Hello Rob,
I'm the other way round, had my 230 now have on order a 3500, I use
the computer with butel software, the disc which came with the scanner.
When the system is up in the window the frequency is in the 1st column
and you can type in the name for that freq in the second column.

I don't have problems programming the UBC230, but what I wanted to know was can you actually change the display on the radio to show the frequency rather than the alpha tag/name if you have put one in. On the 3500 you can toggle between the two by pressing hold and then function+five, I have not found out if you can do this with the 230. I also wanted to know if the 230 can show the ctss/dcs tone on the display instead of just the alpha tag, It appears it only shows the tone if the frequency has the ctss/dcs in search mode.

Have you tried the Bctool software, which works with all of the Uniden Dynamic Memory scanners including the 3500 and 230. I understand its a lot better than the Butel software, which I have not got or want, and the two best things about it is its free and the support is superb and is constantly being updated. I would be completely lost without my copy. It can be downloaded free from http://www.bctool.org/index.php?s=beta, it would also be worth joining the Bctool Yahoo list too.

Rob

Simple resolution... I think!! - The USC230 uses a baud rate of 56000. You need to set this in bcTool if doing the manual detect.

I think the auto detect should ask you if you are using a 230 so should detect it ok.

bcTool is a work in progress and new additions are added regularly, including increased support for the more 'different' radios.

The scanner turned up and I have been having fun learning how to use it. There is no doubt that bcTool is a fantastic application and along with the 'Easier to Read' manual has made it all so much easier. I am not able to pick up as much in the house as I expected. I have the scanner set to band plan 3 and I am using a desktop Scanmaster antenna, the air band has been the most successful, however little else other than noise has turned up on the other bands. I am getting a lot of practise with broadcast screens and lockouts.

545. good battery charger

Yahoo group: UBC3500XLT
Date: 2008-08-11 21:30:15 UTC
From: John
Topic: 545 Message: 545

Hi,
I don't like charging the batteries in the scanner and think long term dosen't do the scanner any good - due the heat build up so have decided to get a seperate charger.
I don't mind paying a little more for a good quality one as there are other appliances i have which might benefit too.
Any one with a recommendation?

John.

I use the MAHA power ex MH-C808M see it at www.pureley gadgets.co.uk. It might pay to search elsewhere to find it cheaper. I find it an excelent charger with individual readout for each battery from AAA to D in any cofiguration.

I was going to suggest the MH-C9000 but in any case, an excellent range of chargers. The only issue I have with mine is the audible noise it makes which can be a bit irritating in a quiet room.

550. Intro / Replacement rubber duck

Yahoo group: UBC3500XLT
Date: 2008-08-12 18:21:49 UTC
From: Guy Rossler
Topic: 550 Message: 550

Hi All

I've been on the group for a month or so now having bought my 3500 in May. I think this is my first post so just wanted to introduce myself.

And of course ask a question.

Being a forgetful old soul, and having a number of spare antennae so I'm often swapping them, I've managed to misplace the standard rubber duck that comes with the radio. This is the one thing I don't have an equivalent of and would appreciate any recommendations of something I can replace it with.

Key requirements are:
* SMA connector
* Roughly same length as original (I use it when I want to be discreet so this is important)
* Obtainable in the UK

Do you have any recommendations please?

Many thanks
Guy

Hi Guy

When I'm out and about I use the Watson W-889 Tele-Gainer, wideband 25MHz - 1900 MHz. Closed it's much the same length as the rubber duck supplied, but extends to about 41 cm in total with 7 sections. It has either fit (specify when you order) and rotates and pivots at the bottom section.. Very discrete in use. I get much better reception in west Kent than with the original. Can't remember where I bought it but Google knows all.

Good hunting

Robin

Thankyou guys,
It seems the Maha range is the business.
I'll have a look around for some prices and order one suitable for my
needs.
Mainly AA battery's, so i've also looked up the Maha PowerEx MH-
C401FS as well.

John.

Hi,
Interesting to see that the US version (BCD396T) has a blue backlit screen, which looks really good i think.

In saying that the reviewer (below) didn't take to it having found it difficult to view in certain conditions:

I wanted to introduce myself, having joined today and having just bought a UBC3500 yesterday as a replacement for an ICOM R20 that died.

I have bought this scanner mainly for airband, and find the reception and audio outstanding! I'm lucky enough to be able to pick up Gatwick, Heathrow and Redhill with ease!

One question for other owners: I seem to have some "play" in the volume/squelch knob: It seems slightly wobbly. Are they usually like this? In all fairness, despite this, the scanner operates perfectly!

Can't get much with the Close Call: Either I'm doing it incorrectly, or there is not much to hear locally!

Simon

Hi

The play in the volume knob is a characteristic of the switch having a push function as well as rotary. When you refer to Redhill is this the same as transmitters at Reigate or is there more than one.

Regards

Dudley Baker

Many thanks for your comments: I just wanted to confirm that it was not something to be concerned about!

When I referred to Redhill, I meant Redhill Aerodrome.

I believe that many of the airband signals are transmitted from the transmitter on Reigate Hill, so chances are, we are all listening to it (Am I correct?)

Regards

Simon

> just bought a UBC3500 yesterday as a replacement for an ICOM R20
> that died.

I've had a UBC3500 a few weeks now and love it, it does need BC tool and a cable for programming - I'm surprised the cable isn't supplied - would only add a couple of quid to the overall cost.

Once I'd categorised my exisitng frequencies by group/system it all started to fall into place. I did stuff like:

Sys: Emergency Grp: (Ambo, Fire)
Sys: Transport Grp: (NRN, Buses, CSR)
Sys: PMR/CB Grp: (446, UK Gen, CB)
etc

I also have a "Location" system and groups for each place I might go (i.e. London W12, London W1, South Herts) so I can easily go to local channels. These are likely duplicates of the stuff in the other groups so you can go straight to anything at a location. BC Tool makes this a breeze.

I love close call (it's why I bought it) and it's revealed a few finds I didn't know about. It's almost possible to scan based on close call rather than what you have stored.

Niggle wise there's quite a bit for me - all of it could be easily sorted (if you could find someone to listen!). I have a Yaesu VX-2E which has probably spoilt me operation wise.

The F button should toggle so you don't have to hold it down in combination with something else to achieve a function, or better still, rip it out and just make those functions happen when you hold the un-shifted button in (i.e. RCL, CC etc). You could then use the F button as a squelch defeat! There should be band plans for each country and properly put the step sizes, splits and service seraches or at least allow us to edit them. The backlight I would like to come on for 10 seconds when the squelch opens or when I press a key, but it's one or the other. Seeing as the part of the screen where the battery voltage appears is blank most of the time why not leave it there! Close call hits should just display on screen not require a button push and why can only use "rcl" from a scan hold?

Cheers,
Dave

No It's not in any of the manuals. I got the info from the Scanproma newsgroup ages ago when people first got their 3500 scanners

Hi All,
This option I can confirm does work. However, the scanning range is limited on mine. Is there a way to adjust the Freq Counter and the range in each bands?
Cheers
Mike

Hi Mike

The UBC72XLT also works with this key combination, and using a grid dip oscillator as a signal generator, I was able to see the exact range of the close call search - quite eye-opening - it searches ranges outside the scanning ranges. I haven't tried this on the 3500 as I hadn't realised the combination was the same to show the frequency counter. By various key presses you can change the range on the UBC72 so it may be the same on the 3500. I'll give it a go sometime.
It looks like it's scanning one range because it tends to latch onto a local strong signal (ie FM local broadcasting, pagers etc) until it's triggered by a stronger one.

Hope this helps.

Regards
Richard

Hi Richard,
Thank you for your interesting reply. It would be nice if you posted your findings here for us all to read. Can you please elaborate more on your Dip Osc Sig Gen and the range you found the 72 went outside its normal scanning range?
Plus any other unknown key combinations for unknown features that may be of some use to me and others on the group.
Many thanks again....
Mike

Why didn't I think of your site Tone? I look there for everything else usually.

I found a handheld radio in the attick and couldn't remember what freq it was on, that's why I needed to know. The proper freq counter is in storage alongside most of my other gear, so as I had the 3500 to hand, it was easier to use that.

579. FM Filter Bandwidths

Yahoo group: UBC3500XLT
Date: 2008-08-30 23:53:20 UTC
From: robinksg
Topic: 579 Message: 579

Hi Folks,

Am enjoying my new 3500XLT... have had a AOR AR2000 and Icom IC-R5 before and the memory management/speed/sensitivity on this really beats them both.

One thing I'm curious about though is the FM modulation selections.

1, Narrowband FM
2, FM
3, Wideband FM
4, Wideband (broadcast) FM.

On previous scanners, NFM has usually been around 5 or 8kHz. Wideband FM would be 130 to 180kHz. Usually there were only those two, one for Comms traffic and one for 'Broadcast' listening.

Question is: what are the FM filter bandwidths of these 4 different FM choices on the 3500XLT ?
Does anyone know? Theyre not described in the manual.
Would appreciate any info.

cheers
Rob

This is my educated guess on this Rob, although I've got little, as you have found, in the literature to back it up.
NFM is for nearly all modern commercial comms systems which use 12.5kHz channel separation
FM is for legacy systems which need a whole 25kHz, such as maritime VHF, the old H.O. analogue stuff, amateur radio etc
WFM is for 75kHz broadcast quality links with 50?S de-emphasis
FMB is for 75kHz broadcast transmissions with 75?S de-emphasis

You'll note that the American market Unidens don't have the FMB mode so my guess is that they added it for the European market.

Hi all!

Just a quick mail to introduce myself. My name is Ton, i live in Barcelona in Spain and i'm the founder and administrator of www.escanerfrecuencias.es
I've been out of the scanning scene for more than a year, but the virus doesn't want to go away. So i decided to buy a modern scanner again and my choice was this one, the UBC3500XLT.

I don't know anything about Dynamic Memory, Fire Tone-Out or Close Call, so expect some dumb questions from my end. I used to have a UBC780XLT, so i do know about the relatively new Unidens.

But don't worry, i will be lurking and searching for a while before i ask questions. And yes, i do read manuals. ;-)

Un saludo,

Ton.

Hi Ton,
Welcome to the group.
The 3500 along with the newer breed of Uniden DMA scanners are just awesome. They have four features which, each on their own, would be a good reason to buy one.
Close call is amazing, it really makes you feel involved in what is going on around you.
They have near instant CTCSS/DCS decoding. It lays all the others to waste.
Enough memory channels for even the keenest user, and configured in a uniquely manageable way.
Above all, they are realistically priced.
Regards,
Tony (short for Anthony) on the South coast of England.

Tried it on a 72XLT, wasn't too impressed about it, but i guess on a
3500 it's better.

> They have near instant CTCSS/DCS decoding. It lays all the others to waste.

The 780XLT also already had that, didn't it?

> Enough memory channels for even the keenest user, and configured in a
> uniquely manageable way.

I'm reading. I'm reading. I'm an old-school bank-and-channel scanner
user, so this will take me some adaption, i guess. But i'll manage.

> Above all, they are realistically priced.

I payed 139 euros on eBay for the EU model, which i think is dead
cheap for a scanner with these specs.

Cheers,

Ton.

.

Since we dont have a service-manual or schematic the "IF" is unknown
best would be to try and get such service-manual from your local
supplier or importer...now these days that is usually a pdf-file on a
cd...so you could easely post that to the files-section here...once i
can have a look at it..i could give you the IF(s) in a few minutes.

Remarks:

Chances are that same IF's are used as in previous models (72/92XLT)
There might be more then just 1 IF (depending on the current band)

You can figure it out yourself too...using another/additional scanner.

Put the 3500xlt on a frequency/band of interest...on a certain empty
channel...dont let it scan...connect a small whip antenna to it.

Take another scanner (with no gaps) hold it as close as possible to
the 3500xlt (antennas in parallel) or taped together.

The second scanner should do a full band-scan...it should be able to
receive at least from 10 mhz ...you will see that it will pick-up the
oscillator-frequencies from the 3500XLT.

From those oscillator-frequencies you can calculate the IF that is
used for that current band,
Usually that is current RX-freq [-] or [+] osc-freq (LO)

Try first the wellknown and most used IF-frequencies such as
10,7 Mhz 21,4 Mhz..tune the second scanner a little around those
freqs to find posible variations.

Have a look at the circuits for the 92 or 72 XLT
avialable in the file-section of this group...see if there's some
other LO-freqs and try those too..if no results do a fullband-scan.

As said there might be more then just one LO/IF specially above
512 Mhz there might be a second LO
(different from that used below 512)

Once you found the IF's you could verify it in practice by tuning to
the strongest signal you can find (should be 9+++)...then retune it
to a frequency wich is exactly [Freq]- or +[LO] (lower or higher) you
should get a weak reception of that same signal (mirror).
(use best-available or outside antenna for that...open sq !)

That's it.

Let us know what you found.

Greetz

Hi all.

I haven't had my 3500 long but i do enjoy the CLOSE CALL feature. I need to ask a question if i may.

Is it possible to capture the scan frequency and CTCSS code at the same time? If so how.
THANKS
Tony

it not too difficult to program it. But maybe that's because i'm a
Uniden guy. ;-)
Received my programming cable today and have a long weekend ahead, so
i'm going to have some fun the upcoming days.

Great stuff, Uniden!!

Ton.

590. Searching skipping programmed frequencies

Yahoo group: UBC3500XLT
Date: 2008-09-11 11:18:01 UTC
From: fabeltjeskrant2001
Topic: 590 Message: 590

Hi all!

I remember reading somewhere that the 3500XLT was able to search and
skip frequencies that are already programmed in the scanner.
I cannot find this anywhere in the manual.

Am i overlooking something?

Ton.

591. UK Charger Problem ?

Yahoo group: UBC3500XLT
Date: 2008-09-14 09:46:18 UTC
From: peterparrot
Topic: 591 Message: 591

My charger stopped working a couple of weeks ago after being used three times. I assume it is the thermal cut out but these things are well sealed and impossible to repair.
Last night I found someone where the same thing had happened and he had returned it for replacement but is there a problem with these chargers. Has anyone else had a problem ?

The only problem I have had with the 3500 charger is that because its in two parts if it comes apart slightly it wont work, so make sure they are fully together.

From: Neil
Topic: 591 Message: 593

My origional charger went wrong after a couple of charges and kept displaying "illegal voltage" or similar, I contacted John at Nevada's where I bought it and they replaced it in the post the next day.

The new one is a good old transformer job, I think the old one was a switch-mode (much lighter in weight) type.

I never bothered to open up the old one, so don't know what went wrong.

As a lot of people will say, never leave it plugged into the scanner, and, if possible, always charge the batteries externaly.

Neil.

596. Close Call Question Please

Yahoo group: UBC3500XLT
Date: 2008-09-22 09:14:12 UTC
From: violetbroadcast
Topic: 596 Message: 596

Hello All,

Could someone who has a little more experience help me please.

How close is close (distance from transmitting radio) for close call ?

I have sat on the outskirts of my local airport in Coventry with close call switched on expecting the radio to bleep at me quite alot and it seems very quiet and not taking hits.

I have the set/known frequencies programmed and the radio scans those fine, it is just the close call.

I know that it will depand on the signal strength of the radio beind used as to the range of the RF but i am looking to understand the distance for a typical motorola type company radio.

I believe my close call to be working as I have taken hits on it but the distance from the source has not been known by me.

Also as anyone ever detected theatre radio mics from outside of the theatre building before ?

Thanks for any help

It's a 'bit of string' answer really, but you can safely say that you
won't get a CC hit unless it is full signal strength. I've had hits from
mobiles and repeaters kilometre away, handhelds 150m and low flying
light aircraft too.
What it comes down to, as well as field strength, is the noise floor
across the scanner's whole bandwidth.
You'd have to be within a few metres for theatre mics, they are only a
few milliwatts. Don't forget to set for WFM too.
Tone.

Hi
Malc,

I
purchased one from here over the internet:
http://www.webbedingen.com/uniden/E_frame.html?http://www.webbedingen.com/uniden/

It was delivered next day (or the day after) - either way, very good service.

Hope
that helps.

Alex

Hi all
I am an old hand at scanning but the grey hairs havnt improved by the recent aquisition of a 3500xlt. This has excersised the grey matter.
I am now looking for a quick way to download airband and other frequencies onto the scanner using bcTool but I need some files from somewhere in scv format to cut and paste. Can I get these from lists and just paste them in. Where can these be obtained???
Am I barking up the wrong tree or just "barking".

HELP would be much appreciated.

Thanks

With bcTool you don't need to use csv files (though you can if you
wish). You can use other peoples .bct files and add them to your own
system in your scanner. You can then delete any groups that you don't
need. Look here in the files section.

Hi all
Here's a tip for anyone whos got a car radio that conects to thier mp3 player. Use the lead to conect to the scanner.Two benifits,first much better sound/volume levels.Second set the radios volume much lower for better battery life,just turn up the car radio volume.
hope this helps

Maplin & Tescos do a similar device thats like a dummy audio cassette
tape for those older car stereos.

Also if you want to turn the volume down in the vehicle its much
easier to turn the stereo down or off than adjusting the scanner..

Hi Mke

The iPOD connection FM transmitters can also be used to good effect.
Tune to an unused frequency between 87 and 108MHz and then select that
freq on your car radio. Or when out and about I switch on the radio on
my mobile phone to the same freq - it gives enough power to listen to
the scanner in the car when I pop into the shop.

regards
Richard

I recently purchased one of these scanners and the manual made no sense to me at all. My fingers got knotted up and my head hurt trying to make sense of it. That was until I came across the link below to a simpler manual.
http://marksscanners.com/3500/3500.html
The difference is amazing, plus there are other postings on this site with lots of usefull information.
I can now understand the original manual and can programme with ease.

To all of you, thankyou for educating an old duffer.

The auto-power down feature was done at the insistence of Ofcom although
not all units suffer from it. I've reviewed a few different types on my
website, including a couple of mods to defeat the auto shut down.

Hello.
I have made a RS232 cable for the scanner.

This is the pinut of the USB cable i was using.

Pin# color
1 RED
2 WHITE
3 GREEN
4 BLACK

The scanner is using pin 1,3 and 4.
I have made a picture of the cable.(see Photos)

hold, enter freq, hold, hold (I think from memory - don't have the scanner to hand to try it)

This should let you enter a freq then scan directly from that freq (also gives you the option to quick save I think)

660. seems to be broken

Yahoo group: UBC3500XLT
Date: 2009-02-07 17:33:47 UTC
From: jibowa
Topic: 660 Message: 660

got a used 3500 recently.
seems to be broken. worked thru a lot of advices given here,
but it seems the scanner behaves not normal.
best example would be a fm radio station. its definitely there,
but sometimes it gets it, more often it doesnt.
with direct entry, it does not get anything.
there is nothing locked.
i have taken it to the airport. there is lots of traffic, but it really
only picks up very few transmissions if at all.
could it be a battery issue?
anybody has a thought on a general test procedure?
it will be much appreciated.
that thing drives me nuts...

Hi

Could be broken. Front end damage.

Try another antenna. If out of warranty open it up and check the
antenna connection

Regards

Dudley Baker

From: Mike
Topic: 663 Message: 663

hi folks!

i still confused with the manual :(

i like to make a full reset of the scanner, to clean up all L/Os and Memorys.

the 2+9 (Turn on) doesn't work here.

Any idea the hot keys to make a full cleanup of the 3500 XLT?

thx

mike

Hi Mike,

Put the scanner off
Push 2 + 9 + HOLD and put the scanner onn
The display now shows ALL CLEAR
This should works

If you just want to reset all the L/Os, you can just hold the L/O key
while the scanner is switched on and in Hold mode (i.e. not scanning)

670. followup on 660 "seems to be broken"

Yahoo group: UBC3500XLT
Date: 2009-02-20 11:40:00 UTC
From: jibowa
Topic: 670 Message: 670

first of all thanks for the replies.

its not a battery issue - same on external power
its not an antenna issue - checked the connector

if i turn the thing on in scan mode it just scans and scans....without hitting anything.
then i punch in the local atis freq and hold...nothing. i open the squelch..just noise.
then i turn it off

when i turn it back on again, suddenly there it is.

if i want to get anything, i have to turn it on with a frequency in hold (2 out of 3 times).
as soon as it gets a transmission, i hit scan and it works
when i then want to add a group,

it just scans and scans....

any suggestions?

671. bcTool is not talking

Hi All,
I'm very new to radio and scanning but have plunged in at the deep end with a 3500. However I can't get it to talk to the bctool program. Have tried all the baud and pole settings to no avial. I'm using a serial lead from Navada and an USB adaptor with drivers installed. The scanner isn't recognised nor does it show on 'my computer' as a device.Tried my pc and laptop and various ports
Apart from switching it on to hold or scan are the any settings on the scanner I need to make? I'd be grateful for any advice.
Thanks
Charlie

Hi,

The radio won't show up in 'my computer' as a device, have a look in device manager to see if the serial port shows up when you plug it in. If you have any other serial devices or serial ports then try some other combination. Also try other software, perhaps run hyperterminal or putty or similar to see whether you can use the serial port manually.

Also double check that all the settings on the computer and radio are correct and that you've not made any silly mistakes. It may be that one of the cables is broken, or that drivers aren't correctly installed.

Not detecting the radio is a known issue in Wine under Linux when using a usb serial port, but it should work fine in Windows. Sometimes if it doesn't detect the radio then I have to switch it off and on again, but this is quite rare.

Hi Alice, Thanks for your very helpful suggestions which I tried over the weekend. Putty and Hyperterminal were a bit beyond my skills, however I concluded it must be a cable fault. I changed the adaptor today and it now connects OK! However the 3500 keypad locks when connected and it makes some strange sounds. I need to explore this further, but many thanks once again for your guidance.

Charlie

Topic: 678 Message: 678

It's been a while since I did any scanning but I have recently been bitten by the bug again. I bought a UBC3500XLT from many good reviews I read, but boy is it confusing compared to my old realistic pro 39 (now knackered). I have a few questions, at the top of my scanner its says DSKP what is it and should it be there? Also the are 2 lines under the frequency
SO 123456 etc
GRP 123456 etc
I guess grp is group but SO?
Well and truley out of my depth but I will eb spending plenty of time messing with it. This morning I got a serial cable and after installing the driver it worked first time bctools looks like a very handy program but again slightly confusing. I live in the Northwest near Lancaster if possible could someone please send me some frequencies (anything and everything)that I may be able to input using bctools. Thanks in advance hope not to ask too many questions and annoy everyone.

Regards Ray

Go to the files section and download some of the bct files there and load them into bctool. On screen all becomes much clearer. You will soon pick up how this thing is made up of systems and groups. My file has Blackpool and Warton which you might hear from your location.

DSKP stands for data skip, and means that when scanning/searching and the radio comes across a carrier wave it will carry on searching/scanning after two seconds.

> under the frequency SO 123456 etc GRP 123456 etc I guess grp is group
> but SO? Well and truley out of my depth but I will eb spending plenty

SO is system number, a group is a set of frequencies, a system is a set of groups.

http://marksscanners.com/3500/3500.html is a much easier to understand manual than the official one.

> near Lancaster if possible could someone please send me some
> frequencies (anything and everything)that I may be able to input

<http://spectruminfo.ofcom.org.uk/spectrumInfo/licences> is the Ofcom list of tradable frequencies which you can search by area and will have all the taxis, shopwatch systems, etc you could want. You'll have to manually enter them though.

If I recall correctly there is a file the group files section with lots of interesting military aviation frequencies for the uk in bct format. Might be another group, let me know if you can't find it and I'll share it.

Finally, nothing beats good old searching.

681. Re: Adjust error

Yahoo group: UBC3500XLT
Date: 2009-03-26 14:37:43 UTC
From: Robin
Topic: 492 Message: 681

I now have two UBC 3500 showing this error message. As my second scanner is still in warranty I contacted Nevada who had not heard of this error before, despite selling thousands of these scanners.

I had contact from someone in Holland who also had the problem and his was solved by his dealer resetting the scanner back to the factory software setting. He was told it was something to do with the WFM settings in the software which could only be done by the dealer.

I explained this to Nevada and they have now asked me to send them both scanners and they are going to attempt to reset them after taking advice from Uniden.

I will let the group know if this solves the problem or not.

Rob

689. Firmware version

Yahoo group: UBC3500XLT
Date: 2009-03-29 11:06:10 UTC
From: Clemens Ostergaard
Topic: 689 Message: 689

Hi group,

I am a new member in Denmark.Recently got the scanner secondhand, and now I am wondering how far the firmware versions have got. I have a version 1.00.04 (s/n 74001728) and I would like to hear if there is any reason to change that.

Also, since I plan to use bctool, what is the cheapest offer one can find for a serial cable?

Finally, are there several versions of the 3500 with different frequency coverage, within the 25-1300 Mhz?

Best,

Clemens S.Ostergaard

(no previous experience w. scanners, only HF)

Hi, when inputting a frequency is there a quick way using tctools to put the base and handset in. When I try to import using .txt file it moves everything along one so puts the handset into the frequency colum if that makes sense. Or do I have to put base & handset as their own entry? thanks in advance Ray

You'll need to put the base and mobile frequencies in separately. In theory the scanner knows what the mobile frequency is if you enter the base frequency, in practise it doesn't often get it correct.

Most of the time you will only need the base frequency as everything tends to be repeated on the base frequency. However if you're confirming inputs or are listening to taxis where you only hear the base station you'll want to enter the mobile as well. At any range, the base station (or repeater) will be the easiest to receive as it will be the most powerful, but there may be times when taxis are within range but the base isn't and so that's another time you'd want to listen to the mobile frequency.

1.6420 is not covered by the 3500xlt, coverage starts at 25 Mhz.

703. Adjust Error on 3500 XLT

Yahoo group: UBC3500XLT
Date: 2009-04-08 10:19:20 UTC
From: Robin
Topic: 703 Message: 703

I thought I would just let people know that last year I posted on this forum and others that I had an "Adjust Error" appear on start up on my Uniden 3500 XLT but nobody else had seen or heard of this error messag before.

As I believed my scanner was out of warranty and there was no other obvious signs that was any other problems with it I did nothing about it. However when I had the oppurtunity to purchase another I took it as I was concerned something else may happen and it would become useless.

Two weeks ago my new 3500 XLT also started to show the adjust error and as it was aslo still in Warranty I contacted Nevada. I had also recieved some contact from someone in the Netherlands saying he had also had the problem and had it cured by his dealer. He was told this problem was due to a fault in the WFM part of the software and it could only be reset by the dealer back to the software settings.

I informed Mark the engineer at Nevada of what the contact in the Netherlands had told me and he said he would make enquiries with Uniden about the problem as they had never heard of this problem despite being the UK's biggest supplier of this scanner.

He contacted me the next day and asked me to send him both scanners as he now knew had to correct the error message, which he done both free of charge for me.

On the repair invoice it states that the repair was " Alignment of WFM Center Voltage"

So if anyone else is getting this problem I would suggest you contact Nevada and they will be able to sort this out for you.

Rob

Hi Peter

Software is available free from here.....
http://www.bctool.org/
As for the lead, I use a serial lead plus a serial/USB converter. It worked out cheaper for me. Check them out on ebay.

Hi all

Could anybody recommend a cost effective upgrade for the supplied antenna and what sort of improvement could I expect.

The other recommendation I would like is for a base antenna, again to be used with the UBC3500XLT.There seems to a huge variety of types and cost, again I would prefer am inexpensive recommendation. Irealise that a base antenna should give an immediate advantage if placed high.

My main areas of interest are VHF/UHF air.

Thank in advance

Phil

For a cheap basic antenna, there's nothing better than making your own!

My first one was just two pieces of copper wire in a 4-way electrical chock block that I had lying around. Cut two 50cm lengths of copper wire, insert one into each end of the chock block and screw reasonably tight. Then put the coax braid in one side and the inner core in the other and put a connector on the scanner end of the coax.

I was surprised what I got for something that took 15mins to make!

Here's the absolute cheapest way Peter. Since I wrote that, there have
appeared on the marketplace many similar devices which although they
look similar, differ in terms of their power interface.

Have added a basic choc-block antenna DIY pic in the pictures section of the group. A 1/4 wave is about 89/centre freq. (IE 89 divided by say 300 MHz is 29cm.)

Regards,

Neil.

Hi Rob,

I nearly grabed one at the Blackpool Rally from the moonraker stand but the guys there did not know what each whip was cut to so I passed.....£15 was a good deal I thought but not if its unsutiable for pulling in what I need.

Do you know the freq of each?

regards
Mike

I use the Moonraker sky scan desk top aerial in doors, this was also purchased from Maplins for around £20.00, I also have the discone version from Maplins which cost about £50.00 but I rate the sky scan better.

Hello Phil,

I have to say I recently bought the minimagmount from Maplins for about £20 I think it was for my mobile set up and all of a sudden my radio has come to life (hearing things that it was just not picking up before). Its plenty good enough for me. Not to big either.

Hi all

Could anybody recommend a cost effective upgrade for the supplied antenna and what sort of improvement could I expect.

The other recommendation I would like is for a base antenna, again to be used with the UBC3500XLT.There seems to a huge variety of types and cost, again I would prefer am inexpensive recommendation. Irealise that a base antenna should give an immediate advantage if placed high.

My main areas of interest are VHF/UHF air.

Thank in advance

Phil

Sorry Mike I don't, have a look on the Moonraker website there may be more details on there: www.moonrakerukltd.com. They have several different aerials.

It's just the way it is Hans, we are dealing with an Asian manufacturer
dealing with a mostly North American market.
Europe is just a small although increasing segment in their sales structure.
There are, however, compatibility challenges. This makes it difficult
for Uniden to market to Europe
This is not unique to Uniden. Look at Yaesu/Vertex for instance.
There are type ratings , bandplan, legislatory, cultural, technological
and many other differences.
I hope Uniden will move towards a better presence in Europe, if they
have any sense, they do so.

I have two 3500 xlt's and they both have different firmware versions (1.01.00 and 1.00.04). I just had to have them both reset by Nevada as they had "Adjust error" on start up and I thought they would have come back with different firmware versions but they still have there original versions installed.

Try to steer away from european models and import a BR330T which is the same scanner but includes a wider frequency range, even shortwave, and supports several different types of trunked system, to a cost lower than UBC3500. The BR330T receives regulary updates.

Or get the new BC346XT with even more options and features and will certainly be supported by upgrades from Uniden.

Unfortunatelly the 346 has limited UHF Air coverage (lacks 225-400MHz) and has more holes in the 806-960MHz band. And almost none of the supported trunking systems are used in Europe.

The 330 is much more compatible with thenEuropean environment (but discontinued).

I can't see that the 346 should be much different than other non-digital Uniden scanners.

The trunked systems include Motorolas Smartnet families and also have Ericssons EDACS system, both that exists in europe. I monitor three Motorola system and one EDACS system here in stockholm with my 346 and it works brilliant.

Trunked scanning is brought to new levels when using the individual volume adjustment per talkgroup and the new priority talkgroup feature lets you monitor chitchat talkgroups, that you earlier had to lock-out, while waiting for the important ones to go active without missing any conversations.

The selection of information to display is as advanced as BCT-15 as you can choose between three different ways to show TG number, trunked channelnumbers, and in both conventional mode as trunked to show channel frequency, without having to settle for either frequency or name tags as with UBC3500.

Anf if there is a selfquiting frequency you could alter the IF frequency with a push of a button. The CloseCall sems to be refined as I get the feeling it is more sensitive. The 346 is a terrific scanner and in my opinion is a much better buy than a non-trunked UBC3500 or the feature less BR330T.

1.
This group is for a UK/Europe only scanner.

2.
Nothing distributed by Uniden in Europe can or ever will (to my knowledge!) 'decode' scrambled signals.

3.
I am sure you mean DIGITAL, not scrambled. If it is simple 'voice inversion', google just that and download free software. If its digital, then I'm sorry, we can't help you!

4.
We cannot legally listen to anything except broadcast stations and CB over here. Mention police and expect to have your collar felt!

Thanks,

Neil.

.

They are probably on the new APCO25 system
it's not really scrambled..but it is Digital
on top of being Digital only...that Digital
could also be "Encrypted" in addition.

Apco sounds like you descibed...buzz,noise and tones.

So you probably need a APCO-capable scanner.

This 3500xlt is also on the market in the US
under a different name...also by Uniden and there
it includes a built-in APCO digital decoder.

Incase that is additionally encrypted the APCO decoder
cant decode it...but such AOCO scanner will be the best
that you can do...it wil certainly bring in more then your
"old" analog scanner..since APCO is standardized and used
nationwide in the US...check Uniden.com or your local scannershop.

Hi Guys
This is my first post. I have had a scanner in the past about 7 years ago and seemed to pick everything up from Police to CB radios however I have decided to get back into it again as I'm disabled and need a hobbie and thought this would be best for me as I enjoyed it before... Problem is I bought the UBC3500XLT a few days ago and been getting to know it. I have learned quite a bit about it by reading up on it so don't seem to have too many prob there. My main problem is that it don't seem to pick much up! I have most of the frequency's used here (Barrhead Glasgow UK)by the taxi's, council, police, etc but all I get is just noise. The scanner stops on the frequency and the signal is brilliant (bought a skyscan mobile & an extendable arial) but again its just a noise that is coming through most of the time. I do get the occational CB radio or sometimes the AIRPORT but it's very frustrating and was wondering if you guys can help me out with any suggestions as to what the problem might be? Thank you very much in anticipation of your answer.....

Tommy

Hi all,

If all goes to plan, a nice new UBC3500XLT will be arriving in the 'shack' tomorrow.

I already have several other receivers, both scanners and dedicated HF.

I'm into computer control and am looking forward to settting up the '3500XLT with BCTool. There's just the matter of a cable sort out...

I have little doubt that I'm going to run into a snag or two so I'm hoping for some help if I need it. I have some years of experience with scanners so it won't be all one-way!

Cheers,

Perry

Hi
You could always use my ''MIKES MODS'' file on this site.Its all aviation but if thats not your bag you can use it by deleating my freqs and incerting your own. This will show how I compile my lists.If I can help any more drop me a line. Im no computer wis kid but any help I can give I will.

Thanks, Mike.

That will be a very useful starting point for me. Scanners have come a long way since I bought my AOR AR-3000A quite a lot of years ago! I have a feeling it's going to be a steep learning curve.

Hi Perry,
When the radio arrives the first thing to do is read the manual and then throw it away.Everything you know or thought you knew about scanners will not help you with this radio.To make sure you don't give up get the software and everything will slot into place.I got the 246T and spent a week or so locked in my house until I worked it out,so when the 3500 came along life was super.Hope I haven:t put you off,its a super radio.

Hi Brian,

The radio arrived safely this afternoon. :-)

I tend to believe that anything; hardware or software, that I can use pretty much straight out of the box without needing to 'RTFM' is good.

I found the UBC3500XLT to be in this league. I had it programmed with a few frequencies and scanning like a good'un within a very short space of time.

Of course there are still a lot more features to explore/learn about, but so far I'm very impressed. So much so that I'm ordering a serial cable tonight.

I'm really looking forward to trying this receiver out in the field. It's compact, light to carry and easy to use. So far, so good!

Regards,

Perry

736. Internal speaker problem - very distorted

Yahoo group: UBC3500XLT
Date: 2009-06-06 21:27:59 UTC
From: ed.evans75@btinternet.com
Topic: 736 Message: 736

Hi all, just found this group.

I've had a look through and can't find any threads about internal speaker problems - apologies if I have missed one.

At anything above volume level 6, the output is very distorted and can't be understood.(I use it manily at airshows so it needs to be turned up fairly loud) It works fine on an external speaker or on earphones. Does anyone have any idea where a replacement speaker can be bought - I've sent it off to a company for repair and they are struggling to find a replacement.

I am lead to believe this is a faily common problem, any help would be apprecited. - unfotunately its well outside its gurantee period.

Many thanks
Ed.

Try Nevada in Portsmouth. I've bought spares for Uniden scanners from
them and they were prompt and easy to business with.

I'm now up and running including using software which will make the set-up much more flexible and powerful.

This has to be the easiest scanner to use that I have ever owned - and I've owned several over the years.

Excellent!

Perry

I can't find this information in the user manual or on the net. Can anyone tell me what the display element "SO" stands for in the scan mode. I understand that "GRP" relates to the group but it has me stumped. A simple answer I am sure.

Thanks in advance.

The S0 row indicates the first digit of the system quick key. The next
part of the row (:0..9) is the second digit.

So: S0:---4------ indicates syteem quick key 04 is present. If blinking:
scanned.

745. USB1 PC Interface Cable issues

Yahoo group: UBC3500XLT
Date: 2009-06-25 20:56:02 UTC
From: gazza_7575
Topic: 745 Message: 745

I got a cable from http://www.unidenshop.com/ that is a USB to USB connector.

I am getting errors after installing the driver (windows XP) and plugging in the cable, saying its not a recognised device.

Its as if it doesnt know there is a driver there even though i clearly installed it.

I am in IT so this shouldn't be too difficult to install :)

Any one else had this issue?

Hi Gazza,
Not all USB to USB Cables are fully wired to do 2 way com's, and yes i had same problem. Cured prob by using a 2 x way cable, and found with XP the drivers are not required for the cable i used.
Best of luck,
73 Steve.

748. Antenea testing

Yahoo group: UBC3500XLT
Date: 2009-07-17 15:08:20 UTC
From: currie.ewan
Topic: 748 Message: 748

Hi,
I am looking for some suggestions on how I can easily test that an external antenea is working correctly.
I have a uniden 3500xlt scanner and have just been content with the "rubber duck" type aerial.
Recently I installed a discone type antenea outside my house.
Maybe my expectations were a little high but it does not appear to be making a huge differnence in what I can hear.

I did join up the cable / connectors myself but used a multimeter to make sure there were no shorts.
The only way I have tested it so far is to tune into a local radio station via the rubber duck aerial.
I then Swapped onto the external antenea. I could see that the signal strength icon on the 3500 did increase.
From that I think it is working...
However I do find that it has not made much of a difference to picking up airband traffic - maybe I am just too far away from my local airport (Prestwick) ?

Any ideas ??

I assume the discone is much higher too?
On getting my 3500 I could hear very little in side with the rubber antenna but switching to a discone outside above the eves brought in a whole new world of signals.
I'd be temped to check the cable from plug in the house to the discone itself (i.e. inner to discone horizontals and outer to the radials) as well as between inner and outer of the coax (I started with rg58 and now use rg213 - with minimal noticeable improvement)

Topic: 745 Message: 753

Hi,

The data connection on the side of a the UBC3500XLT is a serial port, despite it's similarity to some USB connectors! The USB1 cable from unidenshop is a USB to serial converter. I'm not sure why your computer isn't recognising the device. I presume you downloaded the driver from the unidenshop site. The converter appears to be based on the PL-2303 chip from Prolific which is quite widely used, so if XP doesn't already have a driver for this, it may be possible to try a driver from other sources e.g. http://www.prolific.com.tw/eng/downloads.asp?ID=31

If you have a proper serial port on your PC it might be better to use this. The data levels on some USB to serial converters are sometimes insufficient for the bits to be recognised by the serial port on the radio, whilst hardware serial ports are generally closer to the RS-323 specification. You will need to try a different cable (article code 1_cable_ser_3500 on the unidenshop site) for this.

You will also need to set the COM port number in the software you're using to talk to the UBC3500XLT so that it corresponds to that of the port you're using. Hardware COM ports will generally be COM1 or COM2, whilst USB to serial converters will usually map to a port number higher than this.

Regards

Voi

PS - don't forget to set the baud rate on the radio (menu | settings | PC Control) to match that of the controlling software. If the highest speed of 115200 baud is not reliable, try one of the slower speeds.

755. USB to Serial adapter (a working one)

Yahoo group: UBC3500XLT
Date: 2009-07-21 16:22:41 UTC
From: John
Topic: 755 Message: 755

Hi,
You may have seen some of the posts on this - some work some don't.
A trip to AOR in Matlock today found they have no issues with there latest adapter.

Although they now sell Uniden as well as AOR they assured me it would work for the Uniden as well it does on the AOR's - it says powered by FTDI chip on the packaging.

I bought it anyway and just installed - comes with AOR driver disk and also look's to be a quality made adapter.

Works great - cost is £20 btw

John.

756. Antenna adaptor

Yahoo group: UBC3500XLT
Date: 2009-07-24 06:20:53 UTC
From: tosh1948@btinternet.com
Topic: 756 Message: 756

Is the antenna adaptor supplied with the UBC3500XLT readily available as a spare part at reasonable cost?

I'm constantly finding I've misplaced the one supplied with the receiver or have left it at home! Having a couple of spares would be really useful.

758. USB to UBC3500xlt cable for TrunkView

Yahoo group: UBC3500XLT
Date: 2009-08-10 12:35:57 UTC
From: scott.radio
Topic: 758 Message: 758

Is it possible to use a USB cable (eg http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&Item=190322284409) to interface with TrunkView so that the PC auto-tunes the scanner from the control channel to the voice etc. I already know that the software supports it and the scanner but I am unsure to whether the USB cables facilitate tuning the radio to freqs as well as entering memories and programming it.

Thanks for reading,
Scott.

Should be OK, all the USB to serial does is emulate a serial port (albeit a FAST one) and translates to the faster USB and everything 'to and fro'.

Neil.

766. FTDI Drivers under Windows 7

Yahoo group: UBC3500XLT
Date: 2009-10-22 19:18:39 UTC
From: Barry
Topic: 766 Message: 766

Hi Folks,

It seems that 'Windows 7' has the FTDI drivers already built in, so, anyone thinking about upgrading and not being able to use their USB to Serial port adaptor can stop worrying about non-compatability.

Has anyone used bcTool on Windows 7 yet?

So far, I only have a friends '7' PC to test stuff on, but I am hoping that will change soon.
So, I cannot say if the prolific drivers are already in there yet too.

Thanks,

Neil.

PS: Very soon AIS (boats) DSC (maritime assistance system) NOAA (meteorological satellite) and far astray imagination!

769. CH341SER Serial lead for UBC3500XLT and Windows 7

Yahoo group: UBC3500XLT
Date: 2009-11-02 19:34:09 UTC
From: driver.des@btinternet.com
Topic: 769 Message: 769

I'm currently using BcTool to program my UBC3500XLT which is a fantastic little program. However, I cannot get the serial lead to work on my computer which is running Windows 7(x64). I have the latest driver for it (CH341SER) but when installing it, it just says 'Installation Error' I've searched and searched the internet and tried all sorts of drivers, but still cannot find one that works at all.
BcTool works fine with Win 7, so I can still arrange my frequencies on my computer. Then I have to put the files on a flash drive and transfer them to my wife's laptop which is running on Windows Vista.
My serial lead works fine on her laptop but not mine.
Anyone got any ideas how to get it to work with Win 7, or do I just buy another serial lead?

Get in touch with microsoft, this isn't a group's problem, its somthing they need to sort out.
I doubt buying another serial lead will have any effect at all, most of the 'high st' sellers are well behind in technology!

Give em some stick.. (and anyone else suffering from a 'better' than before OS.)

778. SCANNING EQUIPMENT

Yahoo group: UBC3500XLT
Date: 2009-11-24 14:17:53 UTC
From: Tony D
Topic: 778 Message: 778

Hi all.

Tony from Rotherham here. Due to changes in my health i will no longer be able to enjoy my hobby of Milscan etc etc.

I am therefore selling all my equipment. I wanted to place an ad here first to let you guys n gals have the opportunity of buying it before i put the lot on a well known auction site.

I will put a brief list here and then you can contact me off list for any requirements.

Realistic PRO 2042 in excellent condition complete with original box, instruction book and antenna. I have not seen one in such as a condition as this for a very long time. £120 plus £15 P&P

Uniden UBC800XLT in near mint condition complete with original box, manual, programming Software & Cable. £230 plus £15 P&P.

Uniden UBC3500XLT in mint condition complete with original bits n bobs £140 plus £15 P&P

AOR AR2500 in good condition, no box and instructions on CD (pdf) SSB not working but all other modes are OK. £70 plus £10 P&P

ICOM IC-RX7 in immaculate condition complete with all original bits n bobs £170 plus £15 P&P

ICOM IC-R20 immaculate condition complete with original bits n bobs. £270 plus £15 P&P

ICOM IC-756 PRO III Imaculate condition complete with original bits n bobs £1,350 plus £35 P&P

AIRNAV SYSTEMS ANRB2009 Virtual Radar in mint condition complete with original box etc. £300 plus £10 P&P.

I think thats about it. I do have BUTEL software for the Uniden Scanners & Cables. I also have the programming software for the ICOM equipment.

Please email me off group to bigyun2000@...

THANKS
TONY

781. Problems with communication of my laptop/bctool with UBC3500XLT

Yahoo group: UBC3500XLT
Date: 2009-12-23 21:47:51 UTC
From: Ian Conn
Topic: 781 Message: 781

Hi all,

I've a new laptop with windows 7. I bought a new cable from Uniden
and downloaded the vista driver from the Uniden website.
BCtool found the scanner, but the communication between the laptop and
the scanner is slow. What I see on the laptop screen, when using radio control,
is delayed/slow compared to what the scanner is showing. I've tried changing
the baud rate and poll rate in bctool software

and also the settings in the driver

but it hasn't improved the communication between the laptop and bctool.

Has anyone got any ideas please ?

Thanks, Ian

looks like reducing the poll rate to 100 works fine ! sorted

Subject: Problems with communication of my laptop/bctool with UBC3500XLT

Hi all,

I've a new laptop with windows 7. I bought a new cable from Uniden
and downloaded the vista driver from the Uniden website.
BCtool found the scanner, but the communication between the laptop and
the scanner is slow. What I see on the laptop screen, when using radio control,
is delayed/slow compared to what the scanner is showing. I've tried changing
the baud rate and poll rate in bctool software

and also the settings in the driver

but it hasn't improved the communication between the laptop and bctool.

Has anyone got any ideas please ?

Thanks, Ian

Hi all

Just out experimenting with my new 3500 and logged 164.175 Mhz as I walked across an Asda carpark. On checking the freq it comes up as a tracker device frequency. Could this have been a stolen vehicle as I know they are not activated until reported stolen?

Quite possibly, yes. Especially if it was broadcasting fast data bursts which means the RF power has been increased to allow better triangulation.

From: Ben
Topic: 786 Message: 786

Hi all

Can anyone advise me which of the above aerials is best with this scanner. I listen to airband and live around 10 miles from my local airport.

I am mainly wanting to improve sound quality and extending the range. I have read many reveiws and both are mentioned, however I can only get one.

Thanks
Ben Leonard

One has the swivel joint as opposed to the other. Depends where you want to use the scanner really.

Nothing will out perform an outside (of the room) antenna of any kind really, even if its a simple dipole up in the loft.

If you want mobile/portable, the fixed one will give you less grief than the swivel joint one. (It will come loose.)

N.

790. 3500 charging circuit info please

Yahoo group: UBC3500XLT
Date: 2010-01-21 19:56:28 UTC
From: robert27622
Topic: 790 Message: 790

Hi, name here is Bob M1DMJ, in Bournemouth UK. I am trying to repair the charging circuit on my UBC3500 scanner after the protection diode blew, as it is out of warranty and to send for repair would not be fiscally tennable.

I am aware that there are constraints imposed upon Uniden USA forbidding their putting schems and service info on the web. This is to prevent scanners being modded to rx cellphone traffic.

Therefore , as a probable very long shot(!) I wonder if anybody out in ham land could give me any circuit info for this radio, which works ok if switched over to "Alkaline" batt supply. It is only the details of the charging circuit that I seek, have looked all over www and on mods dk etc etc without success.

I can also assure that I would not use any info other than for my own use.

Any info I would greatly appreciate, no matter how small.

Thank you all, 73 de Bob M1DMJ

Is it possible that the inverse polarity diode had simply gone short circuit Bob? That is after all the most common mode of failure for a diode.

I've not in the past been able to find a TSM for this radio unfortunately.

Tone.

Yes it has indeed, you are quite correct, after a lot of hassle getting through the black potting compound that is poured over that area I found a blown diode (VERY!), but given the nature of the board layout it is impossible to tell how it was soldered and which polarity, maybe "Arrow to gnd" as on some of the schematics that I have found re other unidens, but not being sure I don't want to blow anything else!

Thanks for your help Tone, finding the Holy Grail is probably easier than acquiring this circuit diagram hihi!!

Hi Dudley, thanks for the reply, thats most interesting, so if you switch to Alkaline batt supply, does it isolate your mod leads ? or do you just have to remember not to plug in the dc adaptor ?

Got to be away from keyboard for a little while now, but I will have a go with that, much appreciated!!

Your best bet is probably removing the original short circuited diode
and soldering an IN4001 in across the input path.
A reverse polarity diode is reverse biased in normal use so being centre
positive, it's cathode to centre and anode to outer. The anode should be
marked on the component with a ring.

Tone.

A better option for the unstable amoungst us could always solder a diode in line rather than accross the path, that way it cannot make a mess (as it always does) and it will save the circuit. Shame the volt drop might stop it from charging at all though.... (Use a +1V extra power supply maybe?)

Used to do this with CB radios from a certain fellow, in fact, I put a bridge rectifier in one rig he had, that stopped him bringing it back and the bleed over wasn't as bad from him either....

N.

Hi Steve
First thing I would say is forget ARC software I use bctool its easy and its free.Then go to the files section and down load one of the files there.They are mostly bct files so you would need the software.Once you have done that you will see how the programing is done you wil be programing the thing in no time.If you want it Ive done a program of all the UK MIL BASES, I believe its accurate but I havent tested it yet.
mike.p

ps. anyone else wants it drop me a pm with youre e-mail address so I can send it to you.

Hi

I now use it as a base/mobile station so no plans to use batteries. It is probably worth noting that I have set the power supply to 4.5 volts rather than 6. I bought another 3500 for portable use.

Regards

Dudley Baker

Hi

I now use it as a base/mobile station so no plans to use batteries. It
is probably worth noting that I have set the power supply to 4.5 volts
rather than 6. I bought another 3500 for portable use.

Regards

Dudley Baker

Hi Dudley, thanks for the reply, thats most interesting, so if you
switch to Alkaline batt supply, does it isolate your mod leads ? or do
you just have to remember not to plug in the dc adaptor ?

Got to be away from keyboard for a little while now, but I will have a
go with that, much appreciated!!

Greetings all

Although my 3500 has as yet not burnt out its charging diode, I thought I play on the safe side and charge at 4 volts rather than 6volts....its now showing on the screen that this is an " illegal voltage " at the end of the day it can only be a slower charge rate.....carn`t it ?.

Observations gratefully accepted

Martin

Just an update folks, Firstly thanks goes to Martin, Neil, Dudley and all for the input on this most appreciated here.

I am thinking of posting a photo of the board into the files upload to enable any interested parties to see more clearly the situation, with mods permission of course, so I will hang fire a while until I know its ok to post the pics.

Thanks again all so far, Regards Bob

I would recommend supplying the UBC3500XLT with the 6v which it is expecting from its recommended power supply.

NiCad and NiMH batteries are charged using current regulation rather than voltage regulation. The maximum voltage required per cell during the charge cycle (which significantly does not occur on completion of the charge cycle) is 1.55v per cell. So the internal charging circuitry will need 4.65v and in addition to this, it will need at least 0.6v and probably something in the region of 1v in order to maintain the forward voltage loss inherent in the current regulating circuitry.

What appears to be wrong with the UBC3500XLT is that it does not seem to use Delta - V intelligent charging, although this is difficult, if not impossible to implement whilst the battery is in use (ie, the scanner is switched on). Instead it relies on a timed charging principle which relies on the assumption that the battery is fully discharged, that it is of known capacity, and that power has not been interrupted during a previous charge attempt.

Before we get too downhearted about this, we have to remember that many scanners are not at all able to charge standard cells in situ.

The best strategy with the UBC3500XLT is to use high capacity cells >3500mAH and only apply external power when the internal cells are nearly exhausted. It will then enter an 11 hour (OTTOMH) cycle at 200mA (again IMMSMC). Of paramount importance is to not interrupt the charge cycle until it is complete.

Its a shame in this world, that unlike the mains plugs which are universally accepted to be either 110 or 240V, that the different size plugs and sockets cannot all be driven to do the same.
Like, the smaller barrel ones could be 3V, the small to medium ones 5V and so on etc. Thank god they have not used mini USB plugs for different voltages, just think of the amount of fried devices out there if they did!

Its not exactly difficult to implement, rather than 'one size fits all' and one size fries all. We have enough variations out there to cover most, if not all voltages. Most computer accessories I have are the larger barrel plug and are on the whole 12V. I try and make sure of it!

Neil.

I'd go further than that, it's not at all beyond the wit of mankind to develop a system, regardless of the physicality of a connector which, on connecting, negotiates with the device it is powering and then provides the correct voltage and even polarity.

Hi ALL,
Have owned a 3500 since they were first available, when at home it is permanetly plugged into the charger (Charger Turned On) and shows on display, Charge Complete when 3500 is turned off. When 3500 is turned on display shows normal and after I have finnished using it and turn off 3500 Display shows Charge Complete.
When I use the 3500 on internal batteries I always run them down before re-charging with PU. The batteries I am using are the ones that came with it and are 2300mA ones. Doing a test now to see how long they last scanning.
73 Steve. (SKYE).

Greetings fellow scanner`s...!!!!!!

Would anyone have a current freq list for CB usage in the UK please in bcTool format.

Thanks in antisipation.

M.

Might be able to help you there but which CB Frequencies do you want? CB 27/81 or CEPT or the illegal AM frequencies?

Chris

Hi cris

I have been trying to listen to any CB freq with no luck, I realise they are thin on the ground, but I live very close to a trucking stop and still nothing.

I have put all known cb freq into a search on the 3500 and still not good......in fact I looked on the net to get some freq`s and that site suggested that a 1.2 step should be used, but the 3500 stops at 5.0 ?????????.

In answer to your question.....give us what yer got !!!!!!!!!

Many thanks

M.

I think the step may have been 12.5 anyway, I've mailed you a .bct file with the 3 different system frequencies in, hope that helps.

Regards

Chris

Yeah do but just remember that the range on most CBs isn't great and since the advent of free texts on mobile phones there are way less users than there used to be which in my mind is a huge shame but will also mean you could be waiting a while before you get a hit on those frequencies. Also, meant to say, check them out when you import them into bcTool or wherever, I may well have clicked the 'lockout' on some frequencies for interference where I am located.

Good luck.

Chris

Also, if you're mobile, an external antenna will be needed for CB listening, since vehicle bodywork will block signals at CB frequencies fairly effectively. Even an amateur 2m/70cm dual band "Minimag" antenna on the vehicle roof will make a big difference to reception, and better still would be a decent CB antenna or a 1/4 wave vertical on a magmount on the vehicle roof. At home, an external 1/4 wave vertical antenna (approx 2.75m long, ideally with a 2.75m counterpoise, turning it into a vertical 1/2 wave dipole) would be better still. Firestik and Thunderpole antennas were very popular in the old CB days. These are longer still (over 6m). Try Googling Firestik or Thunderpole.

Voi

Did you notice the file I posted to the files section for the benefit of
not only yourself but also the wider group?
It's got CB/27/81 CB/934/81 and CEPT.

Tone

Hi there, I have just bought this scanner and although I've got the basics I really want to sort my groups using BCTool but I can't seem to find a usb cable anywhere. I've tried Maplin in Glasgow & East Kilbride but with no luck. Does anyone have a web site for the correct cable. Also, any hints and tips would be a bonus!

Cheers

Jim

Subject: [UBC3500XLT] USB Cable

Hi there, I have just bought this scanner and although I've got the basics I really want to sort my groups using BCTool but I can't seem to find a usb cable anywhere. I've tried Maplin in Glasgow & East Kilbride but with no luck. Does anyone have a web site for the correct cable. Also, any hints and tips would be a bonus!

Cheers

Jim

I got my UBC3500XLT talking to my PC now (Windows XP). Managed to download the driver as I have a serial cable going into a USB adaptor cable. Eventually got the scanner connected. I however have 2 questions!

1. I have a new laptop at home with Windows 7. Is bctool compatible and is there any setup issues?

2. What now? I had already programmed my scanner manually for AIR, Marine etc... I stay in the Glasgow area so is there any .bct files for me to download from here that will give me more than I already have to enjoy?

Regards

James

Hi
First thing before you download any freqs to youre radio ,open bctool and at the top left there are two arrows sellect the up one to upload what you have on the radio and keep it. You can then use it again at a future date.

Hi
A good place to look would be

http://proma.org.uk

you would have to join [but its free].There are many many freqs you may like.You can search by area and by freq range.One word of caution dont let the law catch you l with emergency freqs in youre scanner .They take a dim view of that.
Good listening.

From: ccmarco2004
Topic: 856 Message: 856

Hi to all,

i'm considering to buy the UBC3500XLT especially for Close Call function but after a lot of reading i still do not have understood one thing :

can in change, in any moment, freq. step and demodulation like ICOM IC-Rx, AOR 8200 and many others ?

For instance, if i want to monitor the 225-400 Mhz band portion both in AM & NFM mode (mil air & sat com), can i use the 3500 without re-program it by personal computer ?

Thanks in advance.

Marco.

Hi

You can set up to 10 custom searches. Set 1 to AM and one to FM both with 225 - 400.

Regards

Dudley Baker

Hi Dudley,

OK, so Bandplan modulation & freq step could be overwritten.

Can i do it also "on the fly", without set up specific custom search ?

I read something different on the web, but probably was referred to another Uniden scanner.

Thanks, Marco.

Marco

Sorry for late reply but I had hope someone with more experience may have an answer. You have 2 options. Default setting or particular mode. Example; with radio set to default put in frequency and press hold. Listen to frequency in the default mode for that band. Press hold and search in default mode. With FM set it will go to FM regardless of band. Not too easy to switch, quickly, between the two.

Regards

Dudley Baker

861. Scan & Save

Yahoo group: UBC3500XLT
Date: 2010-04-23 14:48:14 UTC
From: m2fvs
Topic: 861 Message: 861

Hi gang!

Looking through the manual again this week, and I see that you can set up the 3500 to scan an individual system, and have the active freqs found during that scan saved in to another system.

Just wondering if it would be limited to saving the info for the first hit on each freq (like using CC Search & Store), or would it save each hit?

Likewise, if I use BCTool to scan and save whilst I'm doing something else, what info will it save?

I would try i myself, but I don't live in a very busy radio traffic area!

Thanks
Roger

862. Re: [UBC3500XLT] Scan & Save

Using bctool it saves the freq. The time and date and the number of hits. If there is a tone on the signal then this is also listed as is the channel number if the freq is already in memory.

Thanks for that. I'll have to give it a go, when there is a bit more radio traffic in the area.

Hi Dudley,

now i'm a happy owner of one UBC3500XLT !

Being used to communication receiver, i have to admit that first impact is not easy, but after few hours of usage things changed positively.

Thanks to your replay i learned how to direct input a frequency :-)

Now i started to study user manual....

I self made serial data cable using a cheap photocamera cable (5 euro) found in a little electronic store and i'm using bcTool from some hours.

I'm simply amazed by this free software in conjuction with this radio.

Fast, effective & intuitive.

Performace wise i found the 3500 a bit less sensitive than my Icom R6 (that is also superior in squelch management thanks to its auto mode) especially in Civil & Mil Air ranges, but scanning functionality are very interesting and demodulated audio is good.

I did not yet found good bct files for Italy, so i manually entered some civil air freqs as well as some UHF satcom channels; now bcTool Alert Balloons are nicely popping while i'm typing.

If you have suggestions for other noteworthy control program, utilities or hint & tips, i will appreciate.

Thanks for your support,

Marco.

Hi
If you want civi/mil air freqs try the following site.He has just about any european air freq you could want,plus maps.

http://www.milscan.nl

Thanks Mike,

interesting site.

One of the mil airport described is near to my home.

The only "problem" is that the flight activity, after cold war, is drastically reduced, near to zero.

At least it seems so ....

Anyway, i find the Mil Air band still interesting due to sat activity.

Marco.

868. UBC3500xlt Clears Memory When Powered On

Yahoo group: UBC3500XLT
Date: 2010-05-05 13:00:48 UTC
From: truck_savage
Topic: 868 Message: 868

Hi all. My 3500XLT has recently developed an odd and annoying fault in that, every so often when I power the scanner on, it does an "All Memory Clear" as if I had pressed HOLD-2-9.

None of the keys are stuck or damaged and it only seems to happen if the scanner hasn't been used for a few days.

Just wondering if anyone else has encountered this and/or if anyone has any suggestions for a solution?

TIA

I had a simular fault but it only occured when I had my radio left on and the batteries went compleatly flat.I then [not knowing it had happened] turned on the radio and got the same message .But when I charged up the batteries and rem embered to turn it off all was well again.

872. software problem? firmware question?

Yahoo group: UBC3500XLT
Date: 2010-06-22 17:37:04 UTC
From: jibowa
Topic: 872 Message: 872

hi there,

stumbled over the 3500 looking for something else.

i had put it away when i did not find a solution to my problem last year. #660, 670.

a friend told me this problem sounds more related to software.

this time around i did all the resets and tests (despite knowing what they do) described on the net, and it seems it got partially better scanning ability on civil airband.

just wondering, would any of the tests produce a failure code if there was something wrong?

description of the problem. it scans, but it somehow looses reception ability (now in mil airband).

i discovered, it changes the tone. i.e. jumping thru group frequencies with an open squelch, after the 4th channel, it changes from the loud and normal open squelch tone to a low volume humming sound. after i turn it off then on it gets the normal tone for a couple channels....

anyone here who got a suggestion?

since there are no firmware upgrades for the 3500, could u use software for the 330 or the 396 instead?

any help is appreciated...

thanks

873. 3500XLT background hiss

Yahoo group: UBC3500XLT
Date: 2010-06-23 08:30:30 UTC
From: Keith
Topic: 873 Message: 873

I have had my 3500XLT for around six months and had a lot from it. My one criticism of it is the level of background hiss when receiving. This has nothing to do with signal strength or battery level and is very noticeable, especially when compared to my older Yupi MVT9000. Is this a 'feature' of this receiver or is it just mine?
Any hints or comments welcome.
KEITH

It's not something I've noticed on mine Keith.
Do you have your Settings>Audio AGC on or off?
Cheers,
Tony

Thanks for the two replies. Interestingly I have always had the AGC on as it seemed a good thing to do, but in fact turning it to off does seem to make make an improvement. Anyway it is a minor point that I can live with.
I am currently running the set on an external speaker as I do find the audio not nearly as good as the Yupi which is excellent.

878. Unlocking UBC3500XLT

Yahoo group: UBC3500XLT
Date: 2010-07-04 17:08:52 UTC
From: milcom_chaser
Topic: 878 Message: 878

Greetings!

Was considering purchasing UBC3500XLT. Is it possible to modify this radio so that it has no gaps above 550mhz? Make it truly continuous coverage receiver?

Looking for a radio that has continuous coverage with Close Call or Signal Stalk type feature.

Any suggestions welcome and thanks!

Hi
What drivers are you talking about?
If you have one of the supported radios [see bctool website] all you should need is the [free] bctool program.

883. Trunked Systems - London area

Yahoo group: UBC3500XLT
Date: 2010-07-22 16:27:26 UTC
From: truck_savage
Topic: 883 Message: 883

Hi. Just wondering if anyone has set up any trunked systems around the London area on their UBC3500. I've had the thing for years but never got around to trying any trunked systems. Could use any advice on how to set up (without PC connection) and any systems I can start listening to? London Buses Centrecomm maybe????

Thanks

884. Re: [UBC3500XLT] Trunked Systems - London area

From: Lance Star
Topic: 883 Message: 884

That radio does not trunk. Although you can do it in software:

"Although trunk tracking is not supported by the scanner itself, the radio is steerable by PC and Trunkview has been shown to work with the UBC3500XLT. This allows it to track MPT1327 trunked systems."

Here's trunkview's URL: http://www.linato.net/trunkview/

I think they have used bikes for a while in Merseyside for Fire Alarm calls etc. but this seems a good idea. What's the point in tying up 5 or 6 staff and a truck to put out a wheelie bin fire.

On a radio note, I didn't see one on the bike.

Rich,

I did look for an MTH800e or the alike but could not see one, nor an antenna. Not sure if the bike was a current one in use or a demo bike. I would have assumed though that one way or the other it would have had one.

Safety as a one man crew on a 'rough estate' would be a concern. Having said that a full crewed appliance get attacked quite regularly in some parts of the country.

If I was in the F&RS I would have some concerns about certain deployment/ shout areas :-0

I'll try not to wander off topic and keep it Scanner/Radio related, perhaps a personal Tetra issue radio would suffice.

regards
Mike

I imagine you are right about it being a demo. The old ones I believe had VHF > UHF cross band repeaters on board when they introduced them a few years ago, the officer could then pass a message to control when away from the bike.
I believe that Firelink is primarily an outdoor 'mobile service' and portable coverage was a cost option in the planning stages. I would imagine that not all Airwave sites are available for Firelink traffic, perhaps only those on the 'beefed up' duplicated microwave network?
Airwave are doing some software updates at the moment, as some radios seem to be going into single site trunking mode and loosing the network. There are also some updates to improve the cross band repeaters that some brigades have.

899. off topic ubc3500xlt for sale

Yahoo group: UBC3500XLT
Date: 2010-12-01 10:15:05 UTC
From: erik69uk
Topic: 899 Message: 899

Hi All,

Sorry if this is not the done thing, but I have decided to sale my UBC350r0xlt due to lack of time to use it.
If anybody is interested please let me know (with an offer).

Many thanks,

Eric

900. Heathrow Ground contractors

Yahoo group: UBC3500XLT
Date: 2010-12-15 16:51:07 UTC
From: mildenhalt
Topic: 900 Message: 900

Does anyone have any up to date ground frequencies for Heathrow ie airline services baggage buses or anything with ctcss codes as well, or even any good local services to heathrow with up to date frequencies again with the ctcss codes or DCS.
I have the UBC3500xlt but dont seem to be having any luck with any frequencies that i can get my hands to, that are up to date with ctcss codes or unless im not doing something right to access these codes.
any pointers would be helpful.
Trevor

901. Unable to record using BCTools

Yahoo group: UBC3500XLT
Date: 2011-01-09 23:29:42 UTC
From: mc_mcp
Topic: 901 Message: 901

i use a UBC3500XLT and have done the following:
1. Attached audio lead to "line in" on the PCs Sound card.
2. Enabled recording in BCTools
3. Set the "conventional" path to a local drive and folder for my scanner recordings.

The logging screen is reporting that the .wav file is recording when each hit is logged. I can hear the scanner audio output very clearly from my PC via headphones attached to the PCs sound card.

However, these recordings are not listed under the recordings tab in BCTools and nothing is being saved to my PC. I tried with "FreeSCAN" and that records fine.
BCTools recording, however, does not seem to want to play ball. I am loathed to pay for the pro version if this important function does not work.

Please help.

Thanks

MC

Hi
Ive got both radios as well though I dont see any diferance between the audios ,mind you I use a couple of old stereo speakers conected to them.Maybe thats a way to improve youre sound.

I dont know If you are but I would definatly recomend bc-tool+ to program the radio it works great [if you have the connecting lead]. For instance I keep about 6-7 programs for the radios on my pc and can wipe and install about 1500 freqs in about 3 mins with the free program.
gook listening

917. What have I done?

Yahoo group: UBC3500XLT
Date: 2011-03-02 22:33:11 UTC
From: blitznpieces
Topic: 917 Message: 917

I put the radio into Unlock all as I had locked so many channels and have moved house so therefore wanted to see if the locked out channels had anything on them.

I am using BC tool fro programming.

Now when I scan through my scanner, I see all the channels I have entered, Airband, CB radio. PMR, Fire etc then I see channels saying Custom 2 Custom 3 etc to Custom 10. They seem to be going through all the frequencies the scanner covers.

How do I get it back to just scanning what I have stored in BC tool PLEASE

it is driving me mad as it keeps stopping on radio stations lol

Thank Simon x

Thanks for the reply Dave. TBH I don't fully understand

How do i lock them out please?

When the radio has finished searching the ones I have put in there, air, police etc. It goes Custom 1 then searches 25-28.000 then Custom 2 28.999-45.000 etc etc

How do i stop it searching these custome ones. How do I lock thenm out. I am new to this dave and don't understand how to di it.

Thanks mate

Hi Dave

OK, found that and done it. BUT and here;s the thing

Now instead of scanning

Mil airband 1
2
3
4
5

It goes 1, 2, misses 3, then 4, 5, I dont have a clue why it is missing it. It is not locked. I have reset the scanner to factory settings and uploaded the bctool file to it and still it does it. Help

Simon

Hi guys
I have had my 3500XLT for some time but never used it.
I would like to now, so I have down loaded ubc+ but it did not work.
I was using avast which did not see the virus. So I changed to AVG but every time I download the programmed AVG finds it.
Were can I find a clean programmed and or which programmed should I use?
I have looked in the database and cannot find this info.
Thank for all or any replies
Tom

Hi Tom,
May I sujest bctool program from www.bctool.org
and join the bctool Yahoo Group.

Hi Steve
What is the difference of www.bctool.org and bctool+?
I am new to this so I have not seen the development of the programs and why is there a new programme?
What can you do in one that you cannot do in the other, or is one easer to use than the other?
Tom

Tom,

If you google bctool you can click on the web site www.bctool.org where you can download the control software for your scanner. The software is called bcTool+

Hope this helps

Pete

From: steve
Topic: 936 Message: 936

Thanks Peter for explaining to our new user Tom, I should have explained it better.

Tom the version + is still being developed for all Uniden Scanners and the version you initially download is what I would call a Lite version and when it is fully developed you can upgrade to the version that has far more facilitys at a small cost.

I have been using bcTool from the beginning and if you join the group you will get all the updates RE: progress and hints and tips on the way you program memories., and Files you can load into your UBC3500XLT.

937. Help I'm doing Something

Yahoo group: UBC3500XLT
Date: 2011-03-16 17:32:29 UTC
From: Ernie
Topic: 937 Message: 937

I spent 3 days trying to program my radio.

Set system called Airports
Set groups
Ema
Ltn
Lhr
Gat
Bhx
Man
Put all the frequencies in for them but I can't lockout any it scans them all.
If go to Luton it still scans LHR and try as I may I can't just scan Luton or just EMA I must be missing something

Any help Please

Ernie

Whilst my recording issues are being looked into I thought I would
mention another issue.

When using BCTool+ Func H button with the remote control I am unable to
use the Function key on the actual radio afterwards. In other words,
using the Func H button in the software renders the hardware Function
key dead, even after closing down BCTool+. When pressed all you get is a
bleep but no "F" icon on the screen and no functionality. This can only
be fixed by turning the radio off and then on again.

I have tested with two other software remote controls and Function key
works OK on the radio after using them.

MC

Hi Ernie.

Would make it easier to make airports separate systems 1 through 9. group1.
Then to select airport you just need to press the number you
wish to scan or not scan.

Just a thought. Cheers George

Hi Eenie,

It sounds to me like you have not set a quick key number for each airport group. Once a Quick key has been set then the Function + number (ie 1 to 6) will toggle that group on and off.

949. software/usb lead

Yahoo group: UBC3500XLT
Date: 2011-03-26 12:19:43 UTC
From: danair007
Topic: 949 Message: 949

hello all ,i have had a xlt 3500 for some time now and have got some 25% of the memory used but what i would like is sorftware and a usb lead where is the best place to get to get these items.
any help would be cool.
many thanks danair007

Hi
I'm not sure about the lead but the software is a no brainer go for Bctool+ .You wont need the pay for one if you don't intend to do serious recording and monitoring several radios at once.
If you do go for this option there are several files in the file section of this web site.If you want some more let me know as Ive made a few myself.But you would soon be making them you're self.

Hi.

Does anyone know where I might be able to get a reasonably priced replacement power supply for my UBC 3500XLT as mine has gone missing.

Chris

I have just bought one from this website -
http://www.webbedingen.com/uniden/E_frame.html?http://www.webbedingen.com/uniden/

It's not cheap but I couldn't find a USB cable any cheaper. Obviously there are serial calbes which you can get a lot cheaper but if it's a USB cable it looks like you have to pay £29.75 as far as I can see

From: Julian
Topic: 958 Message: 958

Hi

As a complete newbie, awaiting delivery of my UBC3500XLT I started reading through the maniual on-line and found reference to the 3 Band Plans available on the scanner.

Could someone explain why there are 3 plans and the underlying reason for having different band plans. Also which one is the best one to select in the UK. I'm mainly interested in the UK Airbands.

Thanks
Julian

From: gary
Topic: 964 Message: 964

Hi all,
i have a ubc3500 that didn't come with the mains power supply. I purchase a universal supply and when i set it to 6 volts the ubc says illegal voltage,so i have to set it to 4.5 volts. when i connect to the pc the audio gets very choppy, if i am running from batteries that doesn't happen but the batteries drain very quickly (when connected to pc) and the situation is even worse if i try to record audio. Any suggestions as to where the problem may be?

Hi Dudley,
thanks for the reply, just looked at the one i bought and it's 300mA, I assume it's being overloaded by the 3500 then. doesn't seem to explain the illegal voltage message when it's set to 6V though. Will have a look for a higher output supply.
Thanks again, Gary

, I assume it's being overloaded by the 3500 then. doesn't seem to explain the illegal voltage message when it's set to 6V though.

Yes, it will need more than 300mA when on charge cycle.
It sounds like you've got an unregulated PSU which could put out over 10V when set to 6V and on a light load.

Thanks Tony,
makes sense if supply is feeding more than 6v, and the low current output would explain the choppy audio. still seems strange that the drain on the batteries seems very high when connected to pc. Unless the data signal places extra drain. I'll check ebay for a regulated 800mA supply, thanks again for your help guys,
Regards, gary

972. Rotation of Scroll Control - Counter intuitive?

Yahoo group: UBC3500XLT
Date: 2011-04-12 07:12:28 UTC
From: Julian
Topic: 972 Message: 972

Hi Guys,

I have recently bought a UBC3500XLT which I am really enjoying, but one thing I find annoying is the fact that the scroll control seems counter-intuitive to me. As you turn it clockwise to increase volume/squelch and anti-clockwise to decrease it.

This seems odd as when looking at the screen, you are turning the knob in the opposite dirction to the way in which the display bar is moving across the screen. Also in the menus the up and down selection again appears to me to be the wrong way around.

This may just be me as I am left-handed and maybe my brain works differently to right-handed people's !

I was just wondering if anyone knows if there is any way of reversing this in the programming of the unit?

Thanks Julian

973. Re: [UBC3500XLT] Rotation of Scroll Control - Counter intuitive?

Yahoo group: UBC3500XLT

From: AV
Topic: 972 Message: 973

Hi Julian,

I don't know of any way to reverse the function of this knob, but you may
try viewing it from a different perspective.
If you think of it as viewed from the top, then the button works as a normal
volume or squelch button, increase clockwise and decrease counter-clockwise.
That's my way of dealing with it.

Best regards,
AV

995. Lost Band Plans

Yahoo group: UBC3500XLT
Date: 2011-05-25 23:52:48 UTC
From: Tim bs34
Topic: 995 Message: 995

OK I have a very strong feeling this will be me, but I have just reset my 3500, and all the band plans have vanished / gone on vacation / hidden themselves from me / what have you.

So a couple of questions:

1. Should this happen, as I thought from the manual these were pretty much hard wired in.

2. If they have been wiped how do you reload

3. If I have to reload, does anyone have a .bct file with them in.

Many thanks in advance

Tim,

I assume by band plan you mean 1, 2 & 3 (of which 3 seems to be the best choice for the uk) which determin the step and mode for a given programed frequency.
When you switch on do you get a band plan message after the welcome screen or (as you've done a reset) does it go straight from welcome to 'Nothing to scan'.
Can you decribe the reset procedure that you used.

I'm sorry I have not answered your queston, but I just want to make sure we are talking about the same things.

Pete

Hi Pete,

Many thanks for this, beleive me it is very much appreciated

The reset was the 2-9-Hold to go back to factory settings.

When I switch on it shows a band plan number (1, 2 or 3 dependent on what is selected on start up)

Then is goes to the ubiquitous "Nothing to Scan"

Kick oneself, sledge-hamming own fingers, sever self flagellation all come to mind, to get to moral of this is don't do a hard reset!

Hi tim,

What you have done there is initialize all programed data, so all your frequencies that were programmed into systems and groups have been erased.
The only way to get them back is if you had them saved to a computer using some software like BCtools+.
Do you have a programming lead and a computer, as Bctools+ is an excelent peice of software and makes programming so much easier. I bought my lead from Uniden in Holland, a bit expensive at £30.00 but is well worth the investment as it makes entering data so much easier/faster than doing it on the scanner.

Regards

Pete

From: Tim bs34
Topic: 995 Message: 1000

Hi Pete

I already use BCTools+ and have the USB lead that works well, unfortunately I uploaded all the additional freqs I needed, but didn't back up the old band plates. Year I know the word Pilloc comes to mind!

If you or anyone else has a copy of the band plans in .bct format, it would be very very much appreciated as I will need to re-upload them.

Then do a proper back up!

Cheers

Tim

I have the 800 XLT which is the same software as the 3500.

I have the lead that goes in the back to power the radio and I want to run the radio in the car. The lead has 3 wires coming from the plug end, a black one, a red one and a orange one. Now, on my car battery I have a lead coming off it that I used for another radio, it is red and black. What on earth do I do with the ORANGE lead coming from the radio end?

I hope you understand this. I am wanting to know how to wire this to work it in the car but the 3rd ORANGE wire is confusing me

Thanks SImon

You can get an adaptor from Maplin's to plug into you're cigar lighter [thats what I use].Get the one that allows you to change the voltage.When you first try it with you may get ''ilegal voltage' or some sutch ,just reduce the voltage by one setting and try again.Sorry I cant be more definate but mine is in my car and I cant get to it just yet.Another useful thing is if youre car radio has a MP3 input get a patch lead at the same time and plug it into the front of the 800 [not the back socket] and into the car radio the sound quality is great.
mike.p
ps pse let me know how you get on.

I emailed Martin Lynch and they said to send them the wire and they will fit a cigar lighter socket on the end for me. I am buying a antenna from them too, I am afraid I have a Volvo and only have a casette player, no MP3. I have, however an extention speaker that I can plug in to enhance the audio.

So with the lead wired to the cigar lighter socket I can then remove the radio as and when.

I will keep you posted and thanks for the advice it is much appreciated, I cannot see the socket you mention on Maplin site. Do you have the URL?

Thanks Simon

You could get a cassette adapter from radio shack online, and then run the audio from the scanner into your car stereo...

Works great!!!

Hi Mike

I use BC Tool. Couldn't work the radio without it to be honest. I also have lots of Mil Air frequencies for the UK. I am in the NW and I am lacking other frequencies for this particular area. Mil Air I have plenty of though so thanks so if you have others I would be interested.

Many thanks for the offer mate

Hi All
By way of introduction, I'm Mike. almost part of the older generation and tend to go on a bit at times!!

New 3500 received Saturday, BCTool downloaded, found I had a USB lead from an old external card reader with the correct mini USB for the scanner. The large USB connector was removed and replaced with a 9 Pin serial socket and hood (Maplin £3.50). Scanner detected Ok by BCTool, now just need to get the frequencies input.

Main interest Aviation, Civil and Mil, but hope to expand on this.
Previous scanners Yupiteru 225 and 7100.

Regards

Mike

Hi Mike
Thanks for the file info. Looks good and will certainly make use of it. It also serves as a visual representation of the file system.
I'm from the West Lancashire area, nearest civil airfields are Liverpool and Manchester, not much Mil up here although I do have family near RAF Waddington and a visit to them sometimes leads to a quick tour of the areas bases. Trips further afield will now make use of your file.

Regards
Mike

1038. Newbie Question

Yahoo group: UBC3500XLT
Date: 2011-08-12 21:57:20 UTC
From: peter.degnan1@btinternet.com
Topic: 1038 Message: 1038

I have just bought myself a UBC3500XLT, having decided to come back to scanning after many years. I am totally confused by the whole systems and groups configuration and hope someone can simplify it for me. My previous scanner (Bearcat circa mid '80s) was much simpler to say the least. The instruction book I find confusing at times.
I like to listen to Airband and was wondering if someone can advise how I go about setting up the systems/groups for listening to Airband and inputing my first frequencies for my local airport, East Midlands.
I have the frequencies, not sure where to put the tower, radar etc

I hope this makes sense

Pete

Think of the scanner as a harddrive for a computer.

Old scanners then had a harddrive that where preformatted with 1000 folders and each folder had a lot of default info like frequency 000.0000, channelname with 8 spaces, FM mode, no subtone and a 2 second delay.

Perhaps you only used 200 of these folders and the rest only occupied valuable space.

Now comes these new DMA scanner that is lika an empty harddrive that you can configure yourself and use the available space more efficient.

First you create a folder, that is the System, and within that folder you create several subfolders, that's the Groups. In those groups you enter the actual channels, or talkgroups if it is a trunked multichannel system.

Each system, groups and channels have their own settings and configurations. You can have a quickbutton assigned to a system, say button 1, and also to groups, say 11 for the first group and 12 for the next. Double digit quickbuttons are selected by first pressing the dot button.

If you name a system AIR and its groups to Tower, Ground, and so on you then can swith on and off the whole Air scanning "bank" by button 1 and turn on and off scanning of Tower with button 11 and Ground frequencies by button 12.

It is more complex to program a DMA scanner and not one scanner setup will look the same as another one as there is so much flexibility. There are configuration files that people have done that you could load and use but makes it very hard to understand whats going on. But use a free windows program to program the scanner using a computer. It makes it much easier to manage and move frequencies and groups between different systems.

/Ubbe

Hi

One thing you could do to help is to download one of the files I put in the ''files section'' My Mil would be a good one to start .Then you could see how it looks,and that may help you to visulaise what you can do.
Good listening

> I am totally confused by the whole systems and groups configuration
> and hope someone can simplify it for me.

I thought it was just me ;) I think it's a great concept but poorly implemented. I find it difficult to get to channels quickly or scan just the things I want, I have a Yaesu handheld and just order that alphabetically then into multiple groups by function or location.

I would set it up stored by function then location. So air band I would have a system "Air" then I would have groups "Stansted, Luton, Heathrow" and would put the frequencies for each location within the group. Then I'd have another group in that system with all the air frequencies that might be of interest so if you were somewhere else you could get the airband channels easily.

The 3500's greatest strength is the close call facility which I do use quite a lot, it almost removes the need to have any channels stored.

Cheers,
Dave

I thought it was just me ;) I think it's a great concept but poorly implemented. I find it difficult to get to channels quickly or scan just the things I want, I have a Yaesu handheld and just order that alphabetically then into multiple groups by function or location.

I would set it up stored by function then location. So air band I would have a system "Air" then I would have groups "Stansted, Luton, Heathrow" and would put the frequencies for each location within the group. Then I'd have another group in that system with all the air frequencies that might be of interest so if you were somewhere else you could get the airband channels easily.

The 3500's greatest strength is the close call facility which I do use quite a lot, it almost removes the need to have any channels stored.

Cheers,
Dave

Hi everyone, just joined. :)

Have just bought a UBC 3500XLT so am completely new to the scanner. Have used a couple of scanners in the past but not for a while.

My main interest is aircraft (mil/civ). I'm located down in Eastbourne on the south coast.

Other interests/hobbies are amateur radio - M3ENF (contesting, DX'ing, chatting, Echolink, IOTA, awards etc), NASCAR and music.

Been into SW radio for many years now (I'm only 28 but started listening aged about 8 or 9) and had my amateur callsign for 8 years now.

73s Tammie :)

Hi
The first thing you will need is the lead to conect to youre computer.It can be programed manualy but with the computer and the free Bc tool+ software its a dodle.When you have bctool on youre computer copy ''My Mil'' from this sites file section.I made this for my scanning . I live in London so many of the freqs will be ok for you and it will show you how you can program yure own stuff.If you get into probs contact me [of line] or any of the others in the group could probably help.
good listening

Had a look at Nevada, am I correct in that I must also purchase a serial connecter, as I cannot see a direct scanner to USB cable?

Nice to know my first post got such a supportive response.

Mike,
I have downloaded your MyMil file to my Mac but it wont open, or at least it cant identify an application to open it with. Does this have to be done on a Windows machine? I have a Windows laptop so will be downloading BC Tool on to that too.

Cheers
Pete

From: Robert
Topic: 1038 Message: 1053

I am a Mac user myself Pete. It wont recognise the file as it's a .bcd file which will be the format used by BC Tool. You should still be able to download it though. You would get similar message on a PC if you haven't installed BC Tool as the PC wouldn't recognise the file at that point either. You should still be able to download it on your Mac but as your probably using Safari you need ti uncheck Open safe files after downloading in the General tab of Safari's Preferences.

BC Tools only runs on a PC. You would need to run Windows in Parallels, Fusion or Boot Camp to use BC Tools on your Mac. Or like me use an old PC Laptop for the occasional Mac unfriendly program.

Rob

Hi Peter
Here's the reply I got from Rob [who wrote the program].
''Unfortunatly bctool+ is a windows - only application at the moment At some point in the future I'd love to offer Mac support too,but as I don't currently own a Mac this is quite a way off.
However you can easily run bctool+ inside a Windows virtual machine on the Mac using something like Parallels or Virtual Box''
Hope this saves some sweat trying other ways as this came straight from the horses mouth so to speak.
mike

Thanks for the reply Mike and for asking the Mac question.
Given there is no Mac version yet, I have downloaded the BCTools+ software onto my Windows laptop.
(I realise that Parallels etc can run Windows on a Mac but I don't want to risk "contaminating " it ;-)

Just waiting for my lead to arrive and I will be up and running.
I have opened the MyMil programme and its beginning to make sense....I think:-)
All part of the learning journey I suppose.

Thanks again

From: peter.degnan1@btinternet.com
Topic: 1063 Message: 1063

OK so I now have BCTools+ running on my laptop and have connected my 3500XLT to it using the cable I got from Uniden Shop. Before connecting I downloaded the Vista driver from the website, to enable it to recognise the USB to serial input connector.
When I start up BCTools+ and select connect to scanner, I get a pop up that says "No Scanner Units have been configred, would you like to configure one now?"
I say YES and another window pops up. I name Unit 1 "Pete's Scanner" and click OK.

The software still cant find a scanner. My scanner is still as out the box, no frequencies in it yet, just some mucking about with Close Call settings. Windows can see the cable on COM4 and the driver details look OK in device manager
What am I doing wrong?

Pete

I think I may have found the problem. As previously mentioned, I am a Mac user and rarely use my Windows laptop. I just noticed that I dont have Vista, I have Windows 7 and there is no driver for that on the store website !!
Looks like I have just wasted 39 Euros unless I can find a driver.
GGgrrrrr

Pete

1065. Getting connected, next steps #3

(At least I am doing my bit in getting posting rates up :-)

I found a Windows 7 driver for the same cable on Scannermaster.com and downloaded it. I am now up and running, BCTools can see my scanner.
(Now I remember why I detest Windows so much)

Now ready to input something. I recall the suggestion for putting MyMil into the scanner to start with.
Can someone walk me through that?
I suppose once its in and I can see the System, Groups structure I can modify?

Cheers
Pete

Hi
If you open bctools then go to programing [at the top left] click on it -go to ''open''- may documents- you should find My Mil in there click on it and it should open ok.
Another thing you can do is create youre own programs.Heres how .Open bctool and you will see a blank page on the right [with 4 box's in it ignore these for now]and an empty collum on the left.Right click in this empty collum and open the menu click on this bring up amenu select new system. Go to the dialog box where you name the program and give it a number[1 for the first],click on ok.You should now see that name in the collum on the left.Now highlight it and right click again and select new group.Now in the right hand window select group properties and name the group and select its number [its number 1 as its the first in the system].Now click on the other tag and you can see where to put youre freqs and freq names.Enter the freq first in the first box followed by acouple of spaces then the freq name. Next box just enter the freq
Do this till you have all the freqs for this group , you can then goback and highlight the system again and create another group this time it will be number 2.
You will now be hooked on this process and how easy it is.
When you have finished and go to close down you will get a dialog box where you MUST put the systems name in .I just over right the bct thats alredy there.
next time you want it it should be in that drop down box from programing.

Next thing you will want to do is load it to youre radio .So connect youre radio turn it on then click on the top left sighn it looks like two connectors.The programm will then confirm it sees it.Now to load the system select it from ''programing'' then you get another dialog box first thing is to tick delete previouse then select what you want on the radio.Then click on the button at the top with an arrow pointing at the radio and click on ok and it should load ok.Any probs drop me an e-mail and I will see what I can tell you.
Good luck
Mike.p

Hi
Mobile you cant beat a good mag mount.The external antenna will see more than one in the car as the car acts as a faraday cage [cuts the signal] thats why they say in a thunderstorm stay in the car but dont touch the metal.That aside on the roof the roof acts as agroundplane antenna and helps a lot.
Out of the car I tend to be at an airfield so reception strength isnt a problem, so Iuseanyold rubberduck antenna.
mike.p
ps for the magmount the antenna should be [ball park figures] 10'' for uhf and 18'' for vhf but one will still recieve the other.Mine is 10''long and I find that works ok.You can buy ones with several vertical elements and some rave over them .The same thing applies to home use the radio sees in line of sight so a lot depends on where you are.

Topic: 1063 Message: 1075

Hi Pete and All.

My first posting, please be patient with me!

I have just returned to scanning after a 10 year break, and am slowly trying to get my head around the 3500XLT scanner.

A bit different to my last scanner!

Just came accross this posting, while searching through.

The thing is, The same thing is more or less happening with me, but my system is windows XP.

I bought both cables, and joined them together.

But I just can't get the laptop to reconize the scanner.

Like Pete, I downloaded the BC tools ok.

The only thing I can think of, is that when the box comes up to configure the scanner, it always says com port 3, with no way of changing it to port 1 or 2.

Any help much appreciated.

Thanks

Tim

Just purchased a Uniden UBC3500XLT and thought this may be a good place to get some help/tips ect. Have upgraded from an AR 108, basic but did the job. Have installed BCTool and am awaiting delivery of cables to connect to my PC. Thought it a good oppertunity to pop in here and say hello to you all :) I think I may be asking some very simle questions from you all, have read the manual 3 times now and still none the wiser :(

Hi Steve
I put a walk through for setting up new systems , on the file site.Ive also put a couple of my programs there.So guys can use them or more important for anyone new to the system ,they can see what it all looks like and can modify them to thier oown use.Give it a go if I can help with any probs let me know.

Hi All,

I have been following Peter Degnan's progress with great interest as I had the same circumstances (not the MAC bit however) and cannot believe all the help that has come his way (Peter helped me with where to get the cable from) I now know why I have only just got the scanner back out of the box after having had it for some months - because it becomes very frustrating.

That said I have now got to the stage I want to beat it and get going. I have now got to the situation below where the computer still will not recognise the scanner! I have downloaded the driver for Vista and have now 'hit a brick wall'.

I am now turning to all the fantastic expertise that is on this group to sort out the situation out for me - hopefully!

Regards

Tim Turner

Subject: [UBC3500XLT] Getting connected, next steps

OK so I now have BCTools+ running on my laptop and have connected my 3500XLT to it using the cable I got from Uniden Shop. Before connecting I downloaded the Vista driver from the website, to enable it to recognise the USB to serial input connector.
When I start up BCTools+ and select connect to scanner, I get a pop up that says "No Scanner Units have been configred, would you like to configure one now?"
I say YES and another window pops up. I name Unit 1 "Pete's Scanner" and click OK.

The software still cant find a scanner. My scanner is still as out the box, no frequencies in it yet, just some mucking about with Close Call settings. Windows can see the cable on COM4 and the driver details look OK in device manager
What am I doing wrong?

Pete

Hi Tim
Its been a very ong time since I had to do the setup thing but Ive just checked my settings and they are
COM1
baud rate 115200
25

enable [tick]
auto conect [not ticked]
one trick Ive erd others use is to connect and turn on the radio before opening bctools.If not try connecting and turn on after.
Good luck Im sure someone will come up with a definate solution.

Hi Pete
Ive gone through my setting again and heres what Ive got.

options--operating mode--select 3500xlt

options--scanner ports and serials--
Port COM1 [I dont think it matters which port it sees as long as it sees one]
Baud rate 11520 [the highest it will go]
poll rate 25
audio devise [youre sound card]
enable ticked
auto connect not ticked
save changes tick
click on ok

connect scanner to computer
turn it on
click on connect scanner button [two conectors blue / yellow]
the program should now look for and connect youre radio.I hope

Guy's,

Your input is greatly appreciated but unfortunately isn't working. I have tried the recommendations and think the problem is to do with the Com Ports (despite what Michael says below and I may be wrong of course) as I get different messages and I only have Com 4 or 5 available.

Com 4 gives an error 'Unable to connect to scanner - please ensure cable connected and correct baud rate is selected' (as recommended is set correctly).

Com 5 Unable to open port - please ensure no other applications are using the port.

So I am still at my 'brick-wall' I'm afraid!

Regards

Tim

Hi

I seem to having a similar problem. BCTOOL works fine on my PC but not the laptop. The laptop Widows7 and the PC is XP. So questions.

1. Where will I fined the drivers.
2. How do I check the COM port.

Regards

Dudley Baker

Dudley,
This link has all the necessary drivers at the bottom of the page.
http://www.scannermaster.com/USB_Cable_p/01-551038.htm

You should be able to see what COM port the scanner is on, if the PC/Laptop can "see" it by looking at the device manager, hardware tab.

Remember once the appropriate driver is downloaded, you need to run (or intsall) it if it comes down in a Zip file. You can check to see if it is installed by looking at the Add/Remove Software section in the Control Panel. If it is downloaded and installed, it should be on the list as Pl-2303 or something like that.

Hope this helps

Just an idea that may help! in the old days I messed with Modems and Serial ports quite a bit. It did help connect modems sometimes by dropping to a slower Baud rate. You will still need to set both devices to the same rate but maybe one step down may give success?

Regards Steve

Thanks all for assistance offered - my son-in-law has sorted the problem! He isn't exactly sure what resolved my problem except there was a required link between the COM ports within BcTools and the computer, once this had been 'tied up' the problem was resolved.

There will be other questions I am sure but thanks for the suggestions of help.

Regards

Tim

Hi All

Many thanks for all the help also, I managed to get connected finally, but not too sure on what I did!

I re - installed the driver, useing the link someone gave, checked it was for XP.

One thing I did, which I don't think I did the first time, was to have the cable connected when I came to set up the driver.

I also re - installed BCTools, and when I went to the COM, it gave me two choices, COM 3 or COM 8, where as before it only gave me COM 3.

So chose COM 8, and now am connected!

Will now have to learn how to use it, ther will be more questions!

So, thanks again for all the helpfull suggestions.

Tim

Ps. Was away the weekend down in West Dorset. I took the scanner, and managed to pick up the staff "walkie talkies" from a big commercial campsite nearby, which was interesting.

1095. Progress?

Yahoo group: UBC3500XLT
Date: 2011-09-02 21:30:05 UTC
From: peter.degnan1@btinternet.com
Topic: 1095 Message: 1095

So with the scanner hooked up to BC Tools, I went in and followed the instructions placed in the files section by Mike. So far so good.
I have System 1 as Civil Airports with Group 1 being East Midlands. It works!

Now, I went in tonight and attempted to put in System 2, Derby Misc.
I followed the instructions again and fully input into a new system in BC Tools, System 2 and all the sub groups. I did that OK and saved the file.

I now have two files, Civil Airports (1) and Derby Misc (2).

When I go to load the Derby Misc to the scanner, following the instructions and selecting "Clear all from Scanner" I have removed System 1 from the scanner. I only have the Derby Misc in the box to tick.

How do I reinstate system 1 to the scanner? I still have the file.
I am confused as to how I add a new system and groups to the scanner, when I clear everything from the scanner and I only have the new system in the selection box to up load.
I hope this makes sense.

Pete

From: splowe_99
Topic: 1097 Message: 1097

Hi

Had my 3500 for quite a while and just got back into using it
For some reason I can't get the display to show the Channel Name Tag

When it stops during a scan or I press hold I get the System / Group name alternating on 1 line then just the frequency on the next.

I have double checked and checked again and all my channels have names (I've used the BuTel software)

Have I overlooked anything obvious ?

Regards

Steve

Subject: [UBC3500XLT] Channel Name Tag

Hi

Had my 3500 for quite a while and just got back into using it
For some reason I can't get the display to show the Channel Name Tag

When it stops during a scan or I press hold I get the System / Group name alternating on 1 line then just the frequency on the next.

I have double checked and checked again and all my channels have names (I've used the BuTel software)

Have I overlooked anything obvious ?

Regards

Steve

1110. Software glitch??

Yahoo group: UBC3500XLT
Date: 2011-09-12 17:19:07 UTC
From: m2fvs
Topic: 1110 Message: 1110

Hi all

I've just downloaded BCTOOL+ (v: 2.0.0.916) to program my UBC3500.

When I use the 'tone' column, and set the option to 'search', when I move to the next line, the search resets itself to 'none'.

Am I doing something wrong, or is this a known problem??

Thanks in advance
Roger

1115. Crap-mail

Yahoo group: UBC3500XLT

From: mk_cdf
Topic: 1115 Message: 1115

Does anyone actually modorate this forum to stop the likes of Sport_mm and his insane e-mails? Unfortunately due to this time-waster I'll be unsubscribing from this forum. Shame, as without the crap-mail it looks like a very interesting and knowledgabe forum. Wonder how many others have left because of this one person.

Folks,
I, and I'm sure a lot of other fellows, have tried to contact the group administrator, without success.

I can only see a way out for this. I suggest we create a group with a similar name and purpose and description to which we can all migrate. A few of us could have moderator privileges so that when one is unavailable, another can take the task of cleaning the mess and banning the spammers.

Best regards,
AV

Yahoo! Groups Links

1139. Re: [UBC3500XLT] Spam (new group petition)

Yahoo group: UBC3500XLT
Date: 2011-09-19 13:14:40 UTC
From: AV
Topic: 1135 Message: 1139

Just created a new empty group, with the same settings as this one. Anyone can join and post, but now we will have moderators.
Later on, we'll see how to move the stuff there is on this group to the new one (photos, files, etc...)

You can join via web at the homepage (http://groups.yahoo.com/group/UBC3500-XLT), or use the usual email interface (send an email UBC3500-XLT-subscribe@yahoogroups.com). Please also let me know if you are available to act as moderator. I guess we'll probably be ok with 5 or 6.

If you wish to leave the old group, you can do so at its webpage (http://groups.yahoo.com/group/UBC3500XLT) or send an email to UBC3500XLT-unsubscribe@yahoogroups.com.

We'll also figure out a way to send daily posts to the old group announcing the new one, to prevent newcomers from wasting time here.

Best regards,
AV

Topic: 1217 Message: 1217

hello
my name is Dave
I want to listen on custom search 7 and I hear nothing all other ranges work
What is wrong
I use a dual band aerial and I live in Norwich.

iappriciate any help thanks

1219. Re: [UBC3500XLT] Problem custom search

Yahoo group: UBC3500XLT
Date: 2012-01-06 09:01:10 UTC
From: G.J.Smith
Topic: 1217 Message: 1219

Hi Dave.

Probably nothing wrong, it's a wideband to search
and there is not much activity this week.

Manually stop the search, hold, on a known active fx
like Lakenheath / Mildenhall 309.6 and see if ok.
Press hold button and rotate scroll knob to tune.

Cheers George

1326. Help

Yahoo group: UBC3500XLT
Date: 2012-07-08 11:00:01 UTC
From: julian zentner
Topic: 1326 Message: 1326

Hi

Wondering if anyone can help

I have had my scanner for 2 years now and have recently programmed a whole load of new frequencies in the quick save group and added priority to my favourite frequencies

Now whenever it transmits I have a gap in transmissions either from the atc or the pilot which is really frustrating

Have I programmed too many frequencies or prioritised too many

I have looked through the manual and also markscanners notes but cannot find any answers

If anyone can help it would be very much appreciated

Regards

Julian

Hi Not sure of this but try reducing the number of priorty channels - just to see if it helps.

I would guess that the more priority channels you have the longer the time it takes to scan them and also the active groups you have

Let us know how you get on as this might help other users searching for the same problem in the future.

Regards

SPLOWE

Hi,
Have tried to connect to pc ,no joy.

have usb pro chip lead for ubc3500xlt.
Driver installed on pc,(driver pl-2303)for my system XP.

The lead is showing up ok,in device manager,com port 6.
Have set software to this port and same bit rate,rate set on port.scanner and software.

went over all steps to setup scanner for pc etc.
Tried on vista oc also,no joy also.

have tried other ports also3,4,6,9.

searches not coming up with anything new .

Any ideas please.
Phil.

1455. Noise

Yahoo group: UBC3500XLT
Date: 2013-02-12 20:11:32 UTC
From: loibl.jason
Topic: 1455 Message: 1455

Hi all,
i've had my 3500 a few weeks now and i think its fantastic.
Its new to me but secondhand. the first few weeks was fine then i went to use it today after not using for 2 days and there is a noise coming from it all the time like the squelch is open. therefore preventing it from scanning. it still picks up the frequences if left on one as i've tried it on a couple of different ariels. I've also done a complete reset and reloaded all the frequences as i have bc tool.
I'm now at a loss as of what to do next.
Any suggestions would be greatly recieved.
Jason

I've just taken delivery of a new UBC3500XLT and it's great - lots of clear audio and a sensitive receiver to boot! My old Yupiteru MVT-7100 was starting to get tired and it's audio quality isn't nearly as good as the Bearcat. I use to to monitor the air band and shipping VHF FM band.
All the best Mike (GW8IJT).

I have had 1 for a couple of years and it is good.

Just watch if you have too many priority channels it doesnt like it and it eats batteries very quickly if you take it anywhere(about 6 hours if you are lucky)

enjoy

From: truck_savage
Topic: 1477 Message: 1478

If you search around Ronnie, particularly in the bcTools user groups you can usually find loads of UBC3500XLT frequency listings people in your area have uploaded for free. All you have to do is download them, hook up the scanner to your PC and with a freebie programme such as bcTools upload them to your scanner an hey presto no need for complicated manual programming of frequencies. That's what I did when I first got mine! :-)

Hope this helps.

You would lose some of the signal using tv coax, using RG213 coax is better and a lot thicker than tv coax.

11807. PC connection problem

Yahoo group: UBC3500XLT
Date: 2014-06-25 20:56:37 UTC
From: burtramsk1@...
Topic: 11807 Message: 11807

Hi....I'm Tom, a new member and a complete novice at scanning. I was a little daunted by the menu system on my new UBC3500XLT......'not being the sharpest knife in the draw when it comes to technology' so I decided that programming the unit via Freescan software was the sensible option.
I have purchased a cable and connected to my desktop, having first set the Baud rate on the scanner but alas I cannot get any connection between the two units, not even a message popping up to tell there is a problem, let alone what it is!
I have run the auto port test analysis in Freescan but to no avail....it simply tells me it cannot connect to the scanner. I suspect that I'm missing a driver but have no idea which or where to find it......so please help if you can, it would be appreciated.
Thank you,
Tom.

It depends upon whether you're using a serial cable with a 9-way D-type connector on the PC end, or a USB cable with a USB to serial converter circuit embedded in the USB connector moulding.

Hopefully it's the correct cable. There have been reports of USB to USB cables using the same radio connector. These will definitely not work.

If it's USB to serial cable, have you followed the "Connecting your scanner via USB" link from this website:

https://sites.google.com/site/sixspotsoftware//products/freescan
https://sites.google.com/site/sixspotsoftware//products/freescan

In particular, the: "Installation Notes - Accessing Device Manager" section, which allows you to see if the port actually exists.

Good luck.

Topic: 11807 Message: 11809

Thank you for your reply......I have read through everything but I have been unable to reach a positive conclusion.....I suspect however that I have the wrong, or a dodgy cable, I got it off e'bay from a respectable seller who I believe did his best for me. I have downloaded a Prolific driver 3.2.0.0 (as a trial) but this has made no difference......there is no hint of a connection between the scanner and the Freescan software.
I have also been on the Uniden website (USA) - there doesn't seem to be a UK or a European option. Sadly they do not offer a connecting cable for my model (UBC3500XLT). Could you tell me where to purchase the correct cable, one that I just need to plug and go?
Thanks again....Tom.

My device manager shows:
Ports COM & LPT
Standard serial over Bluetooth link (COM4)
Standard serial over Bluetooth link (COM)
other devices show as:
Bluetooth peripheral device
CP2102 USB to UART bridge controller.

I hope this helps.....thanks.
Tom.

11811. Re: PC connection problem

From: voip10@...
Topic: 11807 Message: 11811

The COM ports showing in device manager are not related to the data cable for the radio, apart from possibly the CP2102 USB to UART bridge controller, but if it was related to the cable, then it would have a COM port associated with it. If it is related to the cable, unplug the cable and see if the CP2102.... entry in device manager disappears. If it does not, then that would suggest it is unrelated.

One thing you could try is to plug the cable into a USB socket and then in device manager, under the Action menu, click on "Scan for hardware changes". If a new device is found which looks like a serial port, you could try an install the driver for it. Let widows do this automatically and allow it to search the internet for the correct driver.

If Windows doesn't find a serial port then, either the cable is faulty, or it isn't a serial cable (as in capable of communicating via the RS232 protocol, and with a COM port number). In which case you could try eBay and putting 121369035630 into the search box. From the seller's description, this item seems like the correct cable. There is also a link on the item's page for the correct driver download.

Topic: 11807 Message: 11812

Thank you......you are correct, the CP2102 USB to UART bridge controller is associated with the cable. When I plugged and unplugged the cable the legend appeared and disappeared in the device manager....When I 'Scan for hardware changes' I get a balloon saying the device driver is being installed.....then a further notification telling me that it was unable to install the driver.....A message follows with a link to a website, details as follows: CP210x USB to UART Bridge VCP Drivers The CP210x USB to UART Bridge Virtual COM Port (VCP) drivers are required for device operation as a Virtual COM Port to facilitate host communication with CP210x
http://www.silabs.com/products/interface/usbtouart/Pages/default.aspx products. These devices can also interface to a host using the USBXpress
http://www.silabs.com/products/mcu/Pages/USBXpress.aspx direct access driver. These drivers are static examples detailed in application note 197: The Serial Communications Guide for the CP210x,

I downloaded this one: CP210xVCP installer_x64.exe but my machines installation wizard tells me it was unable to find anything that was suitable for my machine (Windows 7 64bit)..... I feel I'm making progress though!....am I?
Thank you,
Tom.

The cable ref you have given me (121369035630) is the self-same that I have purchased from Stuhowells and the driver link is to the one I have downloaded. The device manager cannot make the connection to it for some reason. I'm afraid I'm going around in circles with this one!

I have managed to get it connected; please don't ask me how! and I now have the ability to upload some frequencies into the scanner.....all that remains is to learn how to do it properly? I have already uploaded some marine frequencies for the Mersey docks and river traffic, also for Liverpool airport, so it's a start. Thank you very much indeed for your kind help, you're a star.
Tom.

Fantastic. Great to hear you got there in the end. I was going to suggest one other thing, being as the bridge controller came and went as the cable was connnected disconnected, and that was to have tried deleting the bridge controller entry in device manager, and letting Windows find the hardware again. I've had issues like this in the past, where a driver has managed to install itself twice, most recently with a built in SD memory card reader in a brand new laptop. It may be something worth keeping in mind to try if you have any further issues.

If there's more than one to choose from on your machine, I would suggest using the same USB socket every time for plugging in the cable, as Windows will install drivers for every USB socket that is used, and that can lead to the system becoming more than a little confused.

It might be worth joining the SC230 and USC230 Yahoo Groups, as these receivers are very similar in the way they operate and arrange frequencies in memory. Much of what applies to these radios will probably also apply to the UBC3500XLT.

11817. UBC3500XLT and bcTool troubles

Yahoo group: UBC3500XLT
Date: 2014-07-04 17:55:14 UTC
From: forums@...
Topic: 11817 Message: 11817

Hi all

Don't know how I lost touch with the group but here I am back.
Any news on Rob, not been able to get in touch for ages?

I have just upgraded my Win XP system to a nice new Win 7.
Got bcTool installed 1.2.0.554 and working.
However when I tried to upload to my 3500 the scanner when blank and progress of the upload stopped.
Had to take out the batteries, crash shut bcTool and do the reset on the 3500.
Found I could upload very small systems, anything more I got the issue.

Tried my old laptop and uploaded without issues.

Please can someone advise?

Thanks

Mike
